Worldgroup Manager: Users access and navigate your system with Worldgroup Manager, a shareware, distributable Windows client. With the click of an icon, users are connected and logged in to your system.

E-mail: Users can easily manage their mail with their own in box, out box, multi-folded filing cabinet, address book and more.

► *Main menu: Launch your own online service, right out of the box, with Worldgroup. Offer users e-mail, forums, multi-user teleconferencing, polls, files, Internet access and more.*

► *Forums: Create up to 10,000 group message areas or Internet newsgroups for users to exchange ideas on a variety of topics. A map even helps users track conversation threads visually.*

Open Your Windows to the

Worldgroup™. Bring the World a Click Away.

The newest, smartest generation of online software isn't coming from Microsoft. Or CompuServe. Or America Online. It's coming from you — and Galaticomm, the creator of The Major BBS®.

It's called Worldgroup. And it's a client/server online software platform that brings the world to you.

Think of Worldgroup as the bridge that links the people and resources within your company to the world

beyond. With the click of an icon, you can network your entire business world — customers, stockholders, prospects, field staff, distributors, vendors, the press and more — together online!

Worldgroup. The World's Most Powerful Client/Server Online Platform.

By running your own online service, you have 100% control over the content, presentation and revenue of your system. And Worldgroup's client/server approach makes it easy for anyone to use.

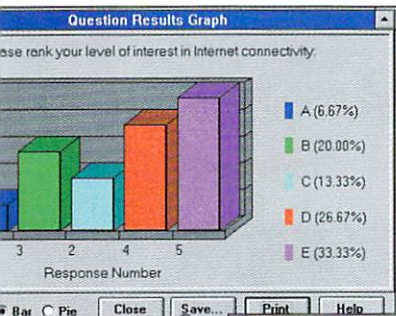

The shareware client runs under Windows on your users' machines. Its multi-threaded architecture lets them do all sorts of cool things simultaneously. Like download files in the background, while reading new mail. Or auto update

new versions of applications transparently. Local caching, "look ahead" and client-driven intelligence maximizes performance at 2,400 or 28,800 bps.

You can customize all the icons and menu pages out of the box. With Worldgroup's multimedia features, you can have a "splash" screen with a BMP image and a WAV or MIDI file, graphic menu backdrops, real-time video and more.

There's even a "launch" client/server utility that downloads and launches files for your users, such as Adobe Acrobat files, Word documents and PowerPoint presentations, in one easy step — while the user is online.

You can use Visual Basic and C to create your own custom client/server applications (we provide source code). Or, just plug and play dozens of add-on applications from our network of Independent Software Vendors.

Polls and Questionnaires: Offer marketing surveys, suggestion boxes, applications forms and testing, to name a few. Results are immediately tallied and can be viewed as exportable bar graphs or pie charts.

File Libraries: Users simply tag the files they're interested in and select the download icon. Files can be downloaded in the background while users enjoy your other services.

Teleconference: Users can simultaneously chat, whisper, sketch diagrams, transfer files and more with each other in real time.

Help: Users will quickly grasp the advantages of Worldgroup's friendly Windows interface, with hypertext online help at every window.

Help for Online Service Manager (OSM): Internal Modem. The modem circuitry shares a PC card with the COM port circuitry, thus hiding the serial part of the connection inside the PC's cabinet. PCMCIA Modem. Most notebook computers on the market today offer PCMCIA slots for extremely compact add-on devices including modems. The modem circuitry is housed in a package barely larger than a credit card.

World of Online Computing

The server runs on a single 486 or Pentium DOS machine and can handle up to 256 users online at once. Locks and Keys™ security provides airtight access control.

Full system accounting and reporting is built in. And in addition to client/server users, you can still support ASCII/ANSI/RIP terminals.

Worldgroup. Beyond the World-Wide Web.

Worldgroup's client/server interface works just as well over the Internet as it does with dial-up modems. We're talking full-fledged interactive applications, not just documents. In addition, ftp server and basic WWW server capabilities are also supported.

Worldgroup provides a communication model that brings the inside world and the outside world together in a secure, productive environment.

But it doesn't stop there. You can make your service accessible via modem, serial ports, TCP/IP, Novell LAN, ISDN and X.25 networks such as CompuServe and SprintNet.

Worldgroup. The Best of Both Worlds.

Worldgroup gives you the best of workgroup software and commercial online services.

E-mail, group discussion areas, file libraries, teleconferencing, surveys and more are all built-in. You can gateway to existing message systems via MHS or UUCP. And that's just the beginning.

Worldgroup. A World of Resources... A Phone Call Away. As a Galacticcomm customer, you'll also receive excellent documentation

and world-class support. In every way, we will work with you to make your online venture a success.

So open your Windows to the powerful, smart new Worldgroup of online computing today. Call your Galacticcomm dealer or call us at 800-328-1128 (or 305-583-5990 outside the U.S. and Canada). You can also send e-mail on the Internet to sales@gcomm.com and access our home page by pointing your Web browser to <http://www.gcomm.com>.

Excilibur BBS

Excilibur is the bulletin board system taking the world by

storm. It was the first system of its kind to run entirely under Windows™ and continues to set the standard of measure. Because Excilibur is built around an accelerated bi-directional protocol, users can upload and download files, chat with other users, and compose messages ... *all at the same time!* Utilizing our proprietary graphical interface, users are able to design their own menus and screens incorporating object oriented graphics, bitmapped graphics, and TrueType fonts. This means no two Excilibur based systems are the same! Advanced error correction and data compression offer reliability and

convenience to all users, even those without error-correcting modems.

As for expandability, Excilibur offers true Plug'N Play abilities. Imagine doors that are both hassle free and easy to use. By using Excilibur's *Application Programming Interface (API)*, third party developers have created everything from Internet gateways and databases to shopping malls and interactive games. The possibilities are endless. Modem into Excilibur HQ/USA at **918.496.8113** or call 800.EXCAL.BBS (800.392.2522). In Canada, modem into Excilibur HQ/Canada at 905.508.8872. Find out what users worldwide are heralding as "*the next generation in BBS software*".

Rusty

Eddie

Call a different kind of BBS. “We are the Friendliest BBS in the World.” Our name says it all. Eddie and I are a couple of burnouts from the 60s. We didn’t like rules then and we don’t now. Come on in and relax; you will be among friends. We have a huge adult section, including over three gigs of adult graphics, as well as a fine selection of public domain and shareware programs, including over a gig of family-type graphics. But that’s not what sets us apart. When you call the first time, you’ll know what no amount of words can tell you, you are Home. That’s right, put up your feet and enjoy yourself.

We live by three no’s: “No Censorship, No Rules, No Hassle.”

You’ll find us like no other BBS:

- We answer your messages and comments.
- We answer your on-line pages.
- We post our address.
- We post our voice phone number.

Psssst... Hey Mac, Can You Get Online?

A bit overlooked in the ongoing intercontinental quarrel over the best way to navigate the ever-more peppered landscape of BBSs have been those cute little boxes with a name: Macintosh.

Though they started life as oversized toasters with a brain, Macs are looking more and more like PCs every day — only they’re delightfully appointed, optimally equipped and act like no DOS-driven personal computer I’ve laid hands on: same species, different animal. That’s why we asked Maria Langer, noted author, consultant and Mac sysop, to figure it all out for us.

Langer explains what it takes to put a Mac online — as a BBS or simple terminal — and what to do once you get there. She reviews the software you’ll want to use and the boards you need to call, with contact numbers, costs and plenty of tips. Page 10.

After you get that Mac board up and running a while, you’ll likely be overwhelmed by it all and forced to crash and burn. That is, unless you follow our own Michael Kuykendall’s advice on how to

deal with, not die from, sysop burnout. The prognosis is actually pretty good, according to Kuykendall, if you just do a little re-energizing now and then. His comments for Mac and PC sysops begin on Page 30.

Starting with last month’s installment about accessing online services via cable, Jacqui Kramer will be covering the latest technology affecting the lives of anyone going online — pretty much everyone drawing breath.

Whether it’s voice communication over the Net (bye-bye, MCI) or talking BBSs, Jacqui will likely be there before it’s here.

This month she talks to a Microsoft insider about what to expect from the most anticipated software/service this side of the millennium: Microsoft Network. Page 68.

Do you have a BBS/Net question regarding something you read in our pages? Please send a note and we’ll be glad to help out, or at least point to where help can be had. The address is right there below.

FEATURES

FLEXIBLE USER INTERFACE

- Complete flexibility in design of data-entry, searching, browsing and detailed viewing
- ANSI, RIPscrip & WIP graphics protocol support for all database functions (DOS & Windows Access)
- Complete entry screen validation via pick lists
- Easily jumps from browse to detail viewing

PHOTOGRAPHS IN SECONDS

- Support for the following image formats: JPG, CMP, PCX, BMP, TIF, TGA and GIF

RELIABLE MULTI-USER CAPABILITIES

- Support for multiple users running separate copies of DC GENESYS on the same computer (ie: DESQview) or on separate computers on a LAN network
- Seamless sharing of data with concurrent dBase/FoxPro applications on the same LAN

DC GENESYS v1.1

Online Multimedia Databases

Imagine creating a beautiful 24-bit color multimedia database that will run with any BBS. DC GENESYS™ allows everyone to easily develop robust graphical online informational applications and services. Durand Communications Network (DCN) specializes in providing interactive software for the online industry that is affordable, easy-to-configure and easy-to-use. DC GENESYS comes with CONTACT PHONEBOOK™, a turnkey photographic directory application. Additional turnkey applications include: CATALOGS PLUS™, AUTO SELLER™, RESIDENTIAL REAL ESTATE™ and MATCH MAKER™. With DCN's all new Windows Interface Protocol™ (WIP), created with the DC INTERFACE BUILDER™, your end-users will be able to access your database with a true all Windows® interface. Your applications can have embedded compressed graphics, text files, sound files and more. DC GENESYS can be accessed through a free terminal program for DOS and Windows.

- A** **WIP Main Menu**
create beautiful native Windows menus with sound, text, icons and compressed images for users to view
- B** **Notepad**
after creating menus in ANSI, RIP or WIP, create an application in GENSCRIPT to link menus with the GENESYS Database

- C** **DC COMPRESS**
DC COMPRESS for Windows can compress TIF, TGA, BMP, PCX and GIF images to CMP or JPG
- D** **Detailed Output**
users will see online 24-bit color WIP menus
- E** **WIP Navigator**
displays the status of your current online WIP session

Mustang's OLX: Doing Mail in Windows

We've all faced this dilemma when reading mail on a BBS: Hammer out a quick (insufficient) reply to the sender to hold down online costs, or open our wallets, sit back and enter an appropriately thoughtful response.

Usually we end up somewhere in between, in mediocrity.

But one way to skirt the problem altogether is to get a hold of Mustang Software's new email reader Off-Line Xpress (OLX) for Windows.

The QWK-compatible mail reader lets callers to any BBS supporting the QWK standard read and reply to messages off-line, and save some bucks in the process.

"OLX for Windows saves time and connection charges by allowing callers to disconnect from the BBS as soon as they have received their mail packet," said Mustang boss Jim Harrer. "This takes only a fraction of the online time they would ordinarily need to read and answer email messages. It also allows callers the freedom to read and answer mail at their convenience, while taking advantage of lower nighttime phone rates or access charges."

OLX's point-and-click interface is well-suited for BBS novices, too. Its nine-item pull-down menu system and context-sensitive toolbars rush up to meet most users' needs and preferences. For instance colors and fonts can be changed according to the caller's desires, and help is served up almost intuitively — if the cursor lingers on a particular item for more than a few seconds, for instance, context-sensitive help automatically presents itself.

In the program's Editor function, users can engage a toolbar for cutting, pasting, copying to the Windows Clipboard, pasting from the Clipboard, saving the message, spell checking and canceling. Additionally, users can edit message header information

NEWS

before and after editing the message. The To:, From: and Subject: fields allow up to 255 characters apiece for accommodating long Internet addresses. And messages themselves can run up to 16,000 lines of text.

OLX also supports UUENCODE for decoding messages sent in the common Internet encoding format. And sound files (Windows .WAV) can be attached

to 20 events such as personal mail, spelling errors, delete mail, etc.

For the more advanced callers, Multi-Packet Handling is provided, which means mail can be read from different BBSs at once. Finally, a handy address book is included for saving addresses.

Other OLX features include:

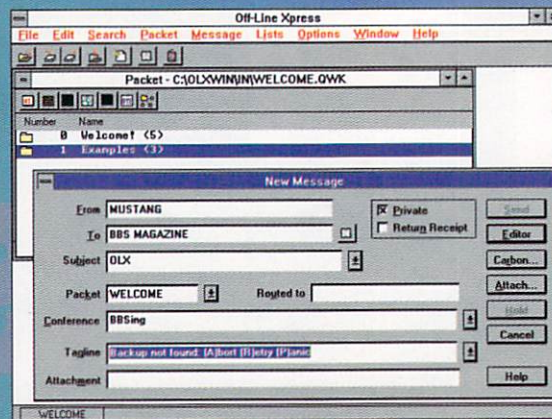

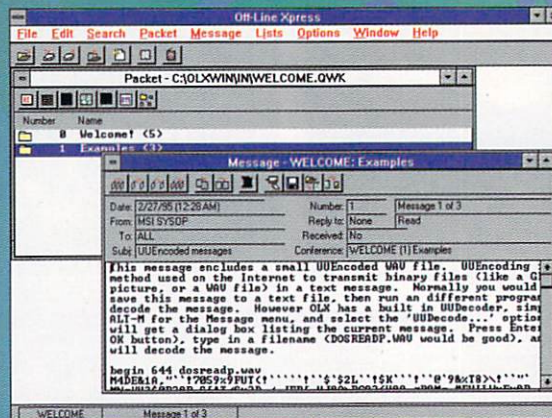

- Internal ZIP/UNZIP support.
- Search function.
- In and Out boxes for personal email.
- Sort messages by thread, number, to, from or subject.
- Sort packets by date or file name.
- Programmable function key macros.
- Save messages to folders or text files.

The addition of OLX fills out Mustang's product line making it the first company to offer a BBS package (Wildcat!), telecommunications program (Qmodem) and an off-line mail reader.

OLX retails for \$49 and is available by calling 800.999.9619.

Going Public: In other Mustang news, the company said it plans to make an initial public offering of 1,000,000 shares of its common stock. It's expected the initial offering price will be between \$5 and \$6 per share.

Cruttenden Roth, Incorporated is the managing underwriter. For information or prospectus, call 714.757.5700.

WIRE

Peeling Off Another BananaCom

People are bananas for BananaCom. Quite possibly the simplest little terminal program

around, BananaCom's newest version, 1.5, installs automatically, finds your modem, determines port and speed, and can even pop up a number to try.

With v1.5, callers will find an improved ZModem among the upgrades.

Three different custom setups can be provided to sysops by Banana Programming, giving them the ability to distribute the program with an ANSI ad for their board and with their phone number that will be auto-dialed upon opening.

And regular registered users will now find an auto-redial function.

BananaCom does not support RIP or Windows, but that's the way its author Paul Wheaton likes it, suggesting that more roads are open for callers using just ANSI.

Site licenses are available, as well as different BananaCom packages, which can prove lucrative to individual BBSs, Wheaton said — the idea being that you get BananaCom into the hands of every modem newbie within your calling radius and let the term package do the rest.

Could work. Try it by writing for a copy to Banana Programming, 1916 Brooks #205, Missoula, MT 59801 (\$2). Or call 406.543.8234 (BBS), 406.543.1928 (voice).

MUDdying the Boards

Get out of those boring Net MUDs and dig into Continuum Software's latest BBS version of MUD Magica.

Run as a door in almost any board, MUD Magica (a Multi-User-Dungeon fantasy role-playing game) now includes graphics and sound support — adding a bit of realism to your fantasy.

Though you still have a lot of pretending to do, version 2.0 allows for things like JPEG pictures added by sysops to anything created in their MUDs, including monsters, places, and non-player characters. And callers can upload pictures of their characters, which can be viewed by other players.

All this has become possible with the long-awaited RIPscrip 2.0 from TeleGrafix Communications. But don't fret, ANSI boosters, Magica supports you and your straight-text cousins.

"Before MUD Magica, there were a lot of obstacles to running a MUD," said Eric Olsen of Continuum. "You needed to not only be a system administrator of an Internet site, but you needed a great deal of technical knowledge, which definitely limited the number of people who could join the fun."

M-Magica can run either as a Door on a BBS (using the standard

DOOR.SYS drop file format) or as a stand-alone, using any standard DOS multitasker including DESQview and Windows.

The MUD comes in three versions: four-line (\$99), 16-line (\$199) and unlimited lines (\$299). Try it out at 404.627.4161.

For more information call 404.635.0931 or eolsen@free.org.

In Synch

Digital Dynamics has loosed its latest version of the Synchronet multinode BBS since last June.

Synchronet 2.1 (now 2.11) is being called a "level three" implementation of the software (Digital Dynamics' SMB, the message base, has seven levels of implementation apparently designed to carry email storage into the future) with a message base that includes real-time compression/decompression using the LZH algorithm. Compression here averages 50 percent (hmmm, what to do with all those extra bytes.) And performance remains unhindered because the message index and header files are stored in uncompressed form; message data not well-compressed is automatically stored uncompressed.

Also new to 2.1 is the "Hyper Allocation" message storage for speedy message tossing. Digital Dynamics says this is specifically designed for systems importing mail on a near-continuous basis.

SBBSECHO is another development. The native SMB Fidonet packet echomail program is available in 16-bit

CONTINUES ...

DOS, 32-bit DOS and 32-bit OS/2 versions. And SBBSFIDO, a Fidonet FTSC-1 to SMB import/export program, is included free with Synchronet and also available in 16- and 32-bit.

Digital Dynamics points to its own addition to the QWK network standard as a high point of the new release. Version 2.1 has extended its abilities to include routed point-to-point Netmail, circular message path detection, and originating time zone information. Synchronet even automatically builds and maintains a local route map, node listing, and user/address look-up table. Callers and sysops can route mail through QWK network nodes to destinations on the Net and Fido.

The SMB specification is available free to developers and includes a free C source code library.

Version 2.1 is a free download for current users. Newcomers pay \$99 for two nodes, \$199 for four, \$299 for eight, \$399 for 16 and \$499 for 250 (plus shipping). A free demo version can be downloaded from 714.529.9547. For more information call 714.529.6328.

Sysops: Generate Your Own Power

Windows is where it's at these days, and few know that better than the folks at PowerBBS Computing.

The company's recently updated PowerAccess terminal program/Windows client for the PowerBBS 4.0 (its Windows-based BBS) have caught on with callers and sysops like pogs.

Now comes PowerGenerator.

The latest release, a joint venture between Brad Friedman and PowerBBS Computing, merges the functionality of PowerAccess with a visually based design environment.

PowerGenerator allows sysops to convert existing PowerBBS menus into completely customiz-

able 3D screens for use in PowerAccess that feature 24-bit color images (in 15 file formats), full support for live WAV and MIDI sounds, real 3D Windows command buttons, icons, edit boxes, captions, and shapes.

For more information, call 516.822.7396.

DCN Slashes Genesys Price

So you've been aching for a cool database for your BBS — something slick like Durand's 24-bit multimedia database kit DC Genesys — but haven't been able to cough up the grand? Quit sulking because Durand Communications Network has lopped \$400 off the top.

Still a hefty \$595, DC Genesys is probably worth it, what with the great applications you'll be creating, each loaded with images, sound, text and tables.

And included with Genesys is Contact Phonebook, a turnkey application designed to serve as a general purpose photographic directory. (Other turnkeys include Auto Seller, Residential Real Estate, Match Maker and the new Catalogs Plus.)

DC Genesys is an open architecture database platform supporting dBASE and FoxPro database file formats as well as superior image compression for

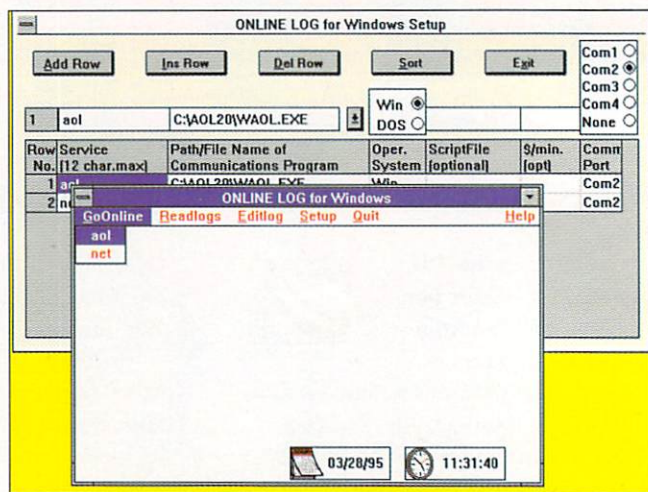

rapid image file transfers.

Call 805.961.8700 for more information.

Logging Logons from Windows

If your online time has fertilized your phone bill to the point where the thing has grown taller than you, it might be time to get Logged.

Online Log from Et Cetera, Inc. is

now delivering a Windows version of its popular DOS-based bean counter.

And like its DOS cousin, the Windows software tracks and logs online sessions on BBSs, online services and the Internet including vendor, date and time, database, subject or client designation, connect time, file name and session cost. It also monitors DOS-based communications software and keeps track of time spent searching CD-ROMs.

Online Log does more than just track, though. The software can produce various output cost analysis and management reports, and records can be stored chronologically, alphabetically, by vendor, database, client, or project.

To check it out, come up with \$59 (regularly \$79) or \$20 for current Online Log for DOS users, and contact Et Cetera at 302.736.5110.

NETCOM Goes USR

NETCOM On-Line Communication Services, Inc. and its 100,000 users have chosen the U.S. Robotics Total Control

Enterprise Network Hub as the nationwide standard for direct Internet access.

The Total Control Hub will be used in NETCOM's 68 points of presence (POPs) nationwide — they plan 175 by year's end. NETCOM is the first publicly traded Internet service provider and one of the leading providers of Internet direct access.

"We evaluated other equipment, but our choice of U.S. Robotics was primarily based on reliability," said Don Hutchison, NETCOM vice president of sales and marketing. "We operate 24 hours a day, seven days a week, and because of the nature of our business, reliable dial-in access is a critical component."

U.S. Robotics' Total Control Enterprise Network Hub has quickly become adopted by many commercial service providers, universities and larger carriers because of its high density, ability to consolidate a variety of components in a single product, its flexibility and expandable architecture.

Locked Board = Useless Board

Would you wait more than a day for a locked BBS to get back online? Not with thousands of others out there to call. If you don't know this by now, sysops, learn it: Locked BBSs are useless BBSs.

So you can either pay someone to babysit the board every time you step out, or you can look into a couple of cheaper solutions — PC Watchdog and Teleboot BB-100.

The Watchdog (\$144.95–159.95, Berkshire Products) is a system moni-

Linux and SCO versions of The Major BBS for UNIX released, prices reduced

Galacticomm, Inc. furthered its commitment to the UNIX environment early this spring with the introduction of Linux and SCO versions for The Major BBS for UNIX. The BBS software powerhouse also unveiled a limited-time price promotion for its UNIX software, offering customer savings of up to 35 percent.

And just for good measure, Galacticomm also unveiled a Spanish language add-on option and Entertainment Collection for its UNIX products.

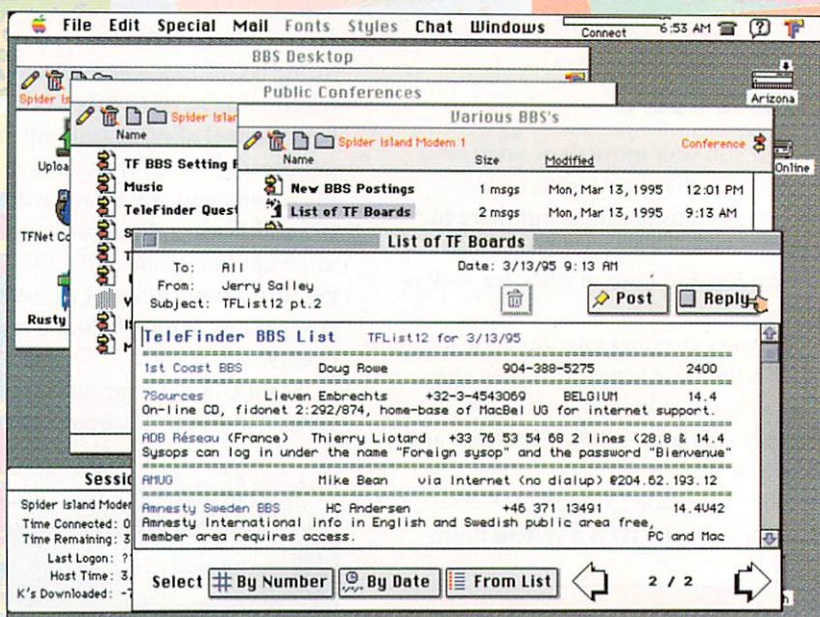

"With our added compatibility for Linux and SCO, the vast majority of UNIX facilities will now be able to run our software on their current operating system," said Galacticomm's President and CEO Scott Brinker. "SCO has a large share of the UNIX market and is the leading choice for government agencies,

Joinin' a Mac Going Online

BBSing the Macintosh way

BY MARIA LANGER

Everyone's going online. You hear about it every day at work, on the news, in the car pool, from your friends. Now you want to join the fun and see what you've been missing.

Or maybe you're already online at work and you want to explore the world of BBSs in your own time, without the boss looking over your shoulder — a wise decision that could save your job.

Or perhaps you've heard so much about this Internet thing that you've decided to investigate on your own. You've heard that the Internet is accessible through many BBSs and figure you'd start there (since you don't know a SLIP

CONTINUES ...

account from a Web browser). Whatever the reason, you want to explore the world of BBSs. But unlike so many of the BBS-savvy folks you know, your computer is a Macintosh.

Well, as you and I both know, you're the one who made the right computer purchase decision. And in the next few pages I'll tell you how you can take your Mac and a modem online, and what you'll find on Mac-based BBSs around the country.

What You'll Need

To connect to a BBS, you need a modem and telecommunications software.

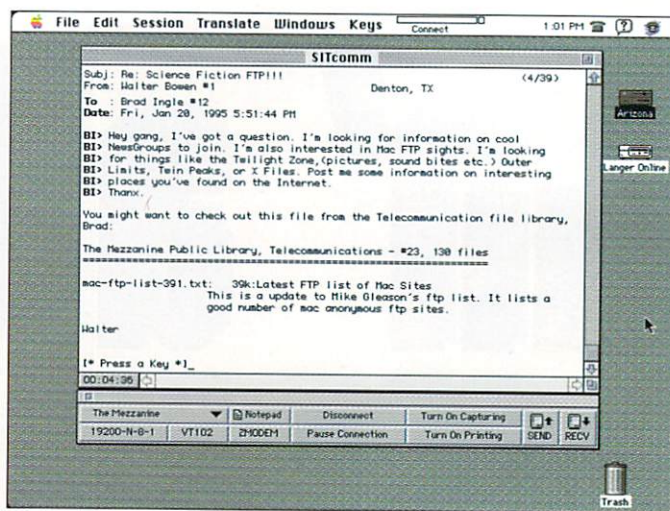

Modem: A modem is a device that lets your computer "talk" over the phone. It does this by turning the computer's digital signals into analog signals and then sending them over a phone line. On the other end of the connection is another modem that turns the analog signals you sent into digital signals that computers can understand.

If you don't have a modem, you'll have to buy one. Prices range from under \$100 for slower models to over \$500 for faster, feature-packed models. These days, you can get a perfectly good 19,200 bps modem (quite fast) for less than \$200. Check the ads in this magazine, as well as those in Macintosh-specific magazines like *Macworld* and *MacUser*, for an idea of what's available. Generally speaking, you want the fastest external modem you can afford. Be sure to specify that the modem will be connected to a Mac so it comes with the correct cable (an IBM-compatible cable will be worthless to you). Then follow the instructions that come with the modem to connect it to your computer and a phone line.

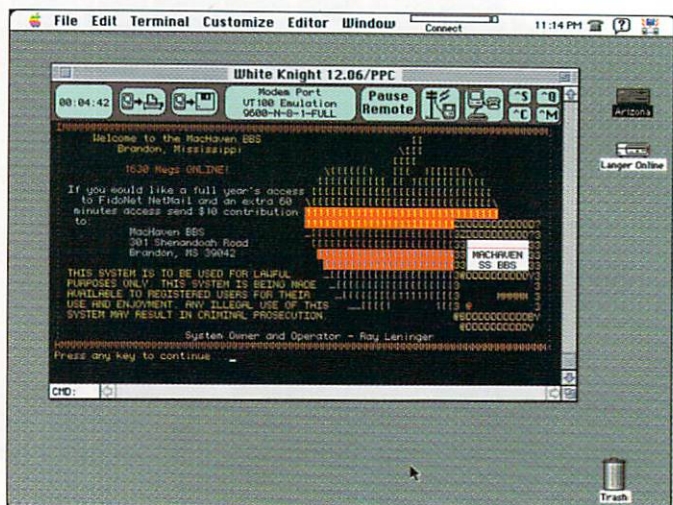

Telecommunications Software: Telecommunications software tells your Macintosh how to use the modem. There are basically two kinds — standard or command-line user interface (CLUI) and graphic user interface (GUI) telecommunications software. I'll tell you about GUI software later. For now, let's look at standard telecommunications software.

If you bought a modem packaged for use with a Macintosh, chances are it came with some kind of basic telecommunications software. This software enables you to connect to a remote system like a BBS right away.

With standard or CLUI telecommunications software, you can dial into just about any BBS, as well as the Internet and

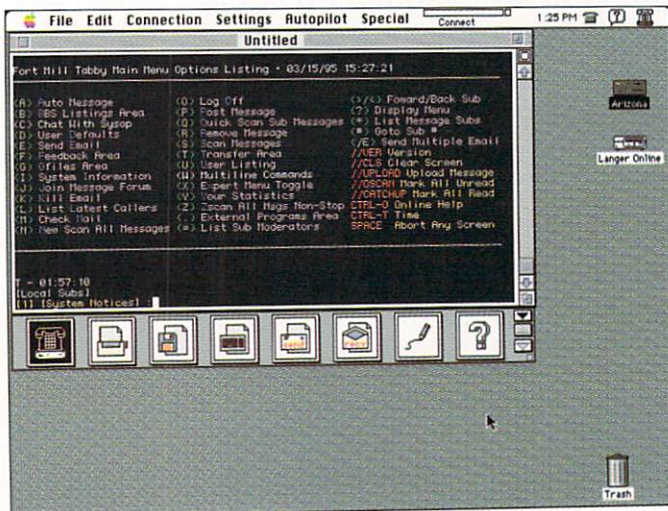

Reading messages on The Mezzanine BBS with SITcomm.

Visiting MacHaven BBS with White Knight.

certain commercial online services like CompuServe, Genie, and Delphi. The drawback — which may be especially painful for Macintosh users — is the fact that once connected, you're presented with an old-fashioned command-line interface with scrolling menus and the need to type in commands. Still, if you have a modem and plan to go online, you really can't do without at least one standard telecommunications software package. Here are some suggestions:

- *ZTerm* is a shareware package by Alverson Software. It is available on most BBSs and is often bundled with modems sold to Mac users. It's a simple program that includes a surprising number of the features found in commercial products.
- *SITComm* is a simple package distributed by Aladdin Systems, Inc. (the same folks who make the popular StuffIt compression software package). Designed to make telecommunications easy, especially for beginners, it has many useful features that appeal to all users.
- *SmartCom II* is a package by Hayes Microcomputer Products, Inc., a major player in the modem market. It combines an easy-to-use interface with an impressive feature set.
- *White Knight* is a package by The FreeSoft Company, makers of Second Sight, a Macintosh-based BBS software package. It's

Checking what's on the menu at Fort Mill Tabby with Smartcom II.

a full-featured program that includes its own programming language and compiler so users can create their own programs to automate online tasks.

• *MicroPhone*, from Software Ventures Corporation, comes in three different packages for different levels of users: MicroPhone LT, MicroPhone II, and MicroPhone Pro. MicroPhone Pro, the top of the line package, includes everything you need to connect to just about any system — including systems on the Internet — via modem or direct network connection.

I can't recommend one of these products over any of the others — each has its own set of features that appeal to a different group of users. Do a little research and find out what other Macintosh users you meet online are using. Then decide for yourself.

What's Out There to Explore

The first thing you have to remember when you're calling a BBS is that platform boundaries disappear. A Macintosh user can connect to any BBS, no matter what kind of computer it's running on.

Don't believe me? Try it for yourself. Pick any BBS mentioned in this magazine, fire up your standard telecommunications software, and dial in. You'll see just about the same thing any other caller sees. You'll be able to read and write messages, upload and download files, chat, and play online games. That's because when you call a BBS, you use its hardware and software — not your own. Your Mac is nothing more than a dumb terminal on someone else's computer.

There are, however, certain exceptional benefits to calling a Macintosh-based BBS if you've got a Mac:

A Mac-based BBS will offer more files of interest to Mac users. Although you can dial into a DOS-based system and download files from it, let's face it: most DOS systems have DOS files. COOLGAME.ZIP isn't going to be much fun on a standard Macintosh if you can't run it. (Although as Power Macintosh users have discovered, DOS and Windows software work fine on a Power PC.)

A Mac-based BBS will offer message areas or conferences of interest to Mac users. Through links to Fidonet, the Internet, and OneNet (a network of FirstClass systems), sysops can carry message areas shared by other BBSs around the world. A Mac sysop is a lot more likely to pick up Mac message areas than a DOS sysop.

A Mac-based BBS not surprisingly attracts more Mac users. That means there will be more people online that you can consult for help and information about your computer.

Since non-Mac systems get most of the press (there are so many of them, they're tough to ignore), I'll concentrate on the Mac-based systems.

Command Line Systems

A CLUI system is one you can dial into with any standard telecommunications software package using any computer. When you connect, text scrolls up your screen, providing information and menu options. To navigate the system, you

So you want to be a sysop...

If you'd like to take control and start your own Mac-based system, following are some things to consider:

Hardware Requirements

To start with, you'll need a computer and at least one modem. Although a BBS can run in the background on a Macintosh, provided you have enough RAM, consider getting a dedicated machine. This way, you don't slow BBS operations down — and BBS callers don't slow you down.

You'll also need at least one modem of the fastest variety you can afford. No one wants to dial into a 2400 bps BBS anymore, so discard any thoughts of giving an old modem new life. Of course, you'll need one modem for each phone line you want to run.

If you want more than two phone lines, you'll have to buy a serial card. Hurdler Cards, which can add two or four serial ports to any Mac with a NuBus slot, are commonly sold by BBS software developers like SoftArc Inc. and Spider Island Software. You'll also need a separate phone line, preferably one with a "hunt" feature, for each modem you install.

Software Possibilities

There are a number of possibilities as far as software goes:

FirstClass Server — Although SoftArc, Inc. cringes when you refer to its GUI software as a BBS system, it's commonly used for hobbyist, user-group, and commercial BBSs worldwide. In fact, at least four of the top Macintosh user groups — BMUG, BCS•Mac, NYMUG, and AMUG — use it as a BBS.

NovaLink Professional — ResNova's software package offers an easy to use GUI and all the features you'd expect in a professional-level information server.

TeleFinder — Spider Island Software's GUI software package was one of the first of the GUI packages to emerge for Macintosh users.

Second Sight — In the old days (pre-1988?) of Macintosh computing, this Scott Watson package was known as Red Ryder Host. Scott now sells his command-line interface BBS from The FreeSoft Company. It has highly configurable, ANSI-compatible menus and plenty of features.

Hermes II — Available through shareware distribution channels, Hermes II by Computer Classifieds is a command-line interface package widely used by Macintosh sysops. It features ANSI-compatible graphics and other standard BBS features.

Reality Check

As someone who has been running a BBS for over six years, I can speak from experience when I say this: building and managing a BBS is a time consuming and sometimes costly endeavor. Many people start pay BBSs thinking it'll earn them enough money to live a life of leisure managing an online community. Most of these people are sorely disappointed. Other people start free BBSs only to find their systems plagued by leeches who use up all the available time downloading files under multiple aliases. These people are frustrated that all their efforts are wasted on callers who don't seem to care.

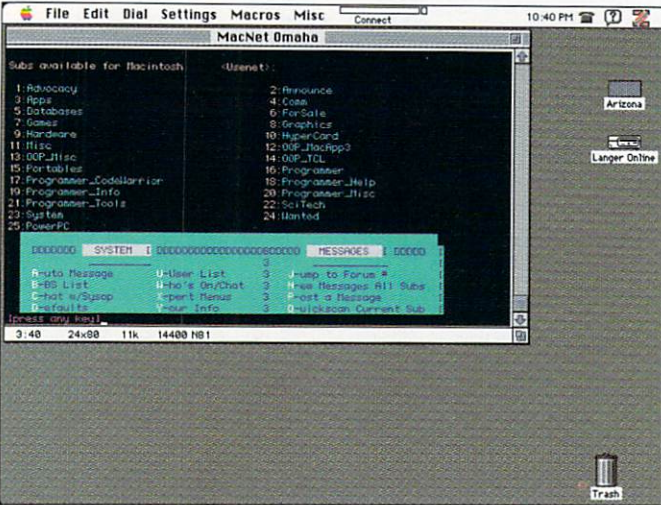

While it's true that there are many well-run, profitable BBSes out there, the people who run them have made serious investments in time and money. For an idea of what it's like to run your own BBS without investing too much, look for a position as a co-sysop on an existing system near you. If you're still anxious to run your own system after six months, go for it.

CONTINUES ...

enter menu letters or numbers or text commands. Put your mouse aside. The only time you'll need it is when you have to send a command to your own software — like to upload or download a file, or disconnect.

Many Macintosh users are intimidated by CLUI systems because they've never been exposed to that kind of computing environment before. As Mac users, we depend on icons, scrolling windows, and menu commands. It's tough sometimes to adjust to a more basic way of communicating with a computer.

But that doesn't mean Macintosh users should avoid CLUI systems. After all, you shouldn't be calling a BBS for its interface. You should be calling for its content. Some of the largest and best run systems in the world are CLUI systems, offering more features than a caller could use in a lifetime.

Using ZTerm to browse the Usenet newsgroups on MacNet Omaha.

Here are the CLUI systems I called while working on this article. You might want to give some of them a try to get started.

Command Liners

MacHaven BBS in Brandon, MS (601.992.9459) is a one-line system accessible at speeds of up to 28.8K bps. It runs on Second Sight BBS software and offers ANSI color graphics, Macintosh files, and access to Fidonet.

MacNet Omaha in Omaha, NE (402.289.2899) is a two-line system with both lines accessible at speeds up to 19.2K bps. Utilizing Hermes II BBS software, it offers Fidonet, Usenet newsgroups and plenty of Macintosh files.

Fort Mill Tabby in Fort Mill, SC (803.548.0900) is a one-line system accessible at speeds up to 19.2K bps. With Hermes II software, it offers local and Fidonet message areas and Macintosh files.

The Mezzanine BBS in Denton, TX (817.565.9165) is a one-line system accessible at speeds up to 28.8K bps. It's the home of The Mezzanine Online Macintosh User's Group. Running on Hermes II software, it offers local and Fidonet message areas and files.

The GUIs

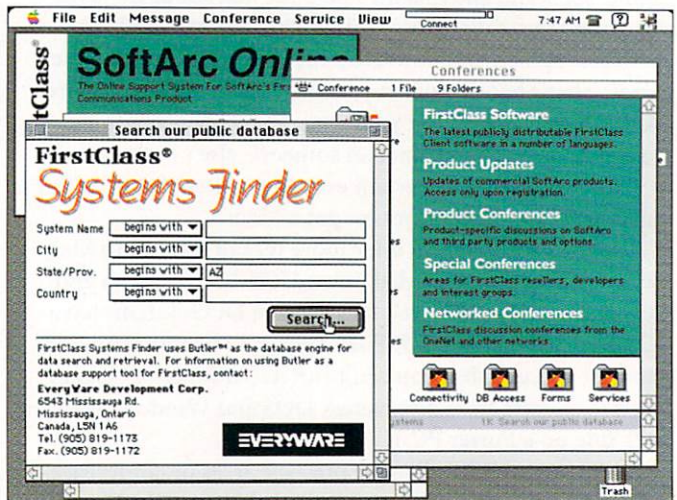

Graphic user interface (GUI) systems are more in line with what a Macintosh user expects. Rather than offering users an on-screen text menu, GUI systems display intuitive windows, icons, and menus. The drawback: in order to take advantage of a GUI system, you must obtain and use a GUI telecommunications software package specifically designed for that BBS or server package.

Fortunately, all the user or client software packages are freely distributable so it won't cost you anything (except disk space) to collect them all. But no matter how much you like the interface offered by one package, you can't use its user or client software to call a BBS based on a different package.

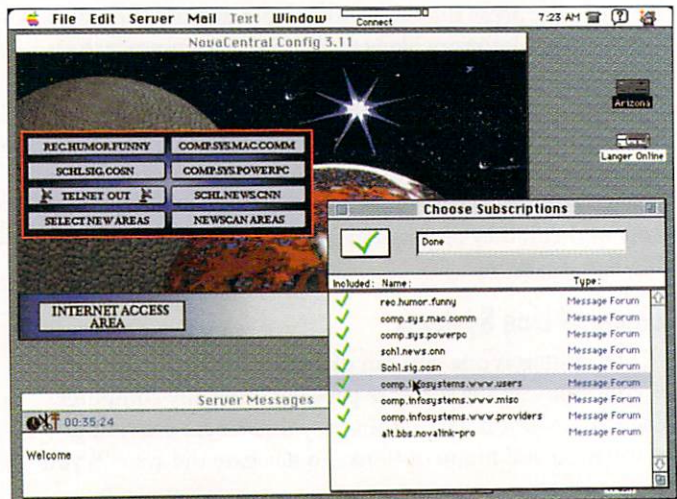

How do you get this software? In most cases you'll be able to dial into a GUI system with standard telecommunications software. You won't see the GUI, of course, but you can use the CLUI to navigate the system, find the software, and download it. Then log off, load and configure your new software, and dial in again to use the GUI.

Here's a list of the top three GUI software packages for Macintosh BBSs.

- *FirstClass Client* is a software package for use with SoftArc Inc.'s FirstClass Server software.

Searching for FirstClass systems on SoftArc Online.

Checking out the Internet newsgroups on NovaCentral.

• *NovaTerm* is a software package for use with ResNova Software, Inc.'s NovaLink Professional server software.

• *TeleFinder User* is a software package for use with Spider Island Software's TeleFinder BBS.

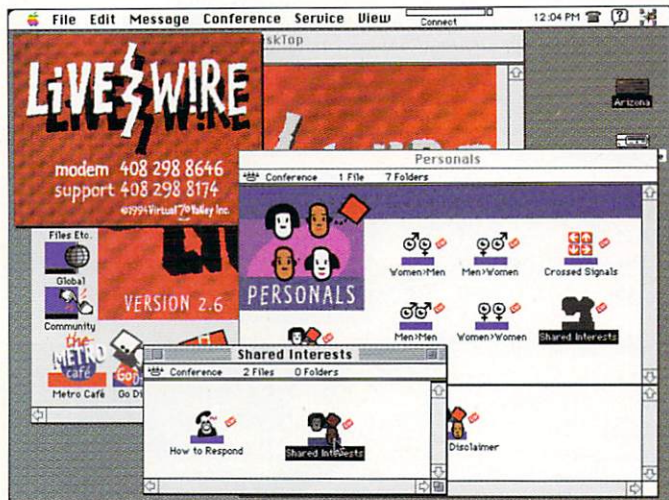

Which is the best? Again, it's a matter of personal preference. In addition, since all of these packages offer the sysop the ability to customize his system — usually through the use of configuration or settings files you can download and use on your Mac — no two systems based on the same package will be exactly alike. Like CLUI systems, the overall appeal of a BBS relies heavily on the sysop's imagination, organization, and system management skills.

Here are some GUI systems you can try:

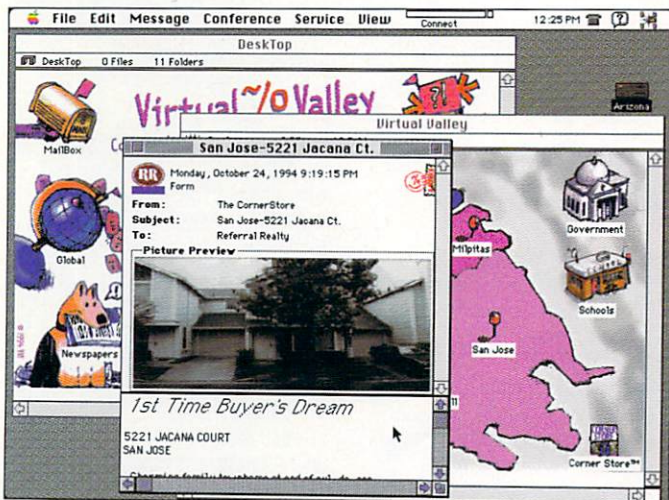

SoftArc Online in Markham, ONT (905.415.7070) is a multi-line system that's home to SoftArc, Inc., makers of FirstClass Server and Client. It features product support conferences and files, and an online database you can use to find FirstClass systems all over the world.

LiveWire in San Jose, CA (408.298.8646) is a 26-line FirstClass-based BBS that offers local, OneNet, and Usenet conferences,

Exploring the personals areas on LiveWire.

Shopping for a home on Virtual Valley.

files, chat, and a wide range of community-related features. Its funky, extremely well designed settings file really gives the BBS a distinctive look.

Another San Jose BBS, *Virtual Valley* (408.999.0966), is a 16-line FirstClass system run by the same organization, Virtual Valley, a subsidiary of Metro Newspapers. This system has a number of schools, government agencies, radio stations, and television stations online. Its settings file gives it a completely different look. These two systems provide a great example of what can be achieved on a Macintosh-based system.

The Electronic Pen in Harrington Park, NJ (201.767.6337) is a FirstClass-based, two-line system supporting speeds up to

Browsing the file libraries on The Electronic Pen.

19.2K bps. (I've been running since 1989.) It offers Fidonet and OneNet message areas and over 15,000 Macintosh files. To browse the system, you must log on as Guest with a password of Guest. To set up a free account, follow the instructions online.

Spider Island BBS in Irvine, CA (714.730.5785) is a multi-line system for the support of TeleFinder BBS software. On it you can find numbers for other TeleFinder systems, as well as TFNet and other network message areas.

NovaCentral in Huntington Beach, CA (714.379.9004) is the home of ResNova Software, Inc., developers of NovaLink Professional and NovaTerm software. It's a multi-line system that features tasteful images, graphics, and sounds when you access it with its configuration file (which you can download on your first call). It also offers some files and a gateway to the Internet.

AppleSeeds BBS in Cary, NC (919.481.4896) is a 3-line TeleFinder-based BBS accessible at speeds of up to 28.8K bps. It is the home of the Triangle Macintosh User's Group, which

CONTINUES ...

reserves one line for member use. Its settings file, which you can download on your first call, provides custom sounds, backgrounds, and icons. It features Fidonet message areas and files.

FreeThinkers BBS in Miami, FL (305.821.1909) is a single-line TeleFinder system accessible at speeds of up to 14.4K bps. It offers Mac, DOS and GIF files, conferences, and a place to "practice your First Amendment rights."

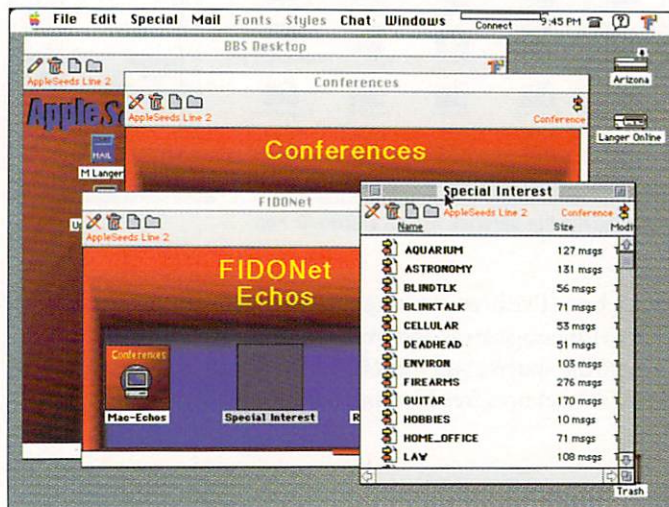

Acculex Online in Tacoma, WA (206.566.9768) is a single-line system using NovaLink Professional software. It features message areas on a variety of topics.

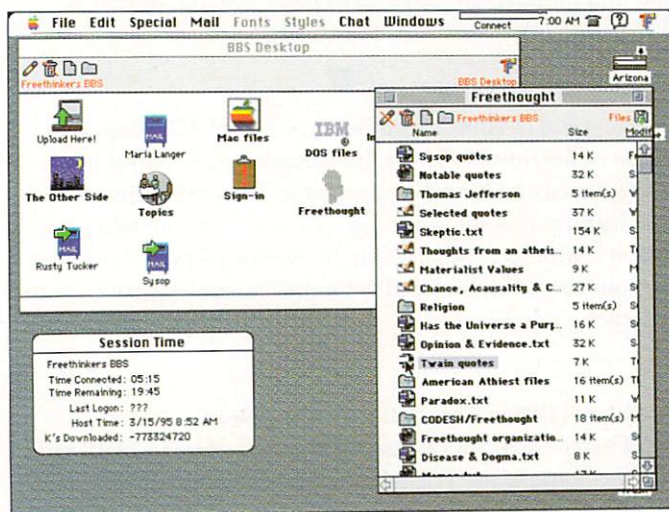

The send-off

With the right tools — modem and telecommunications software — anyone can explore the world of BBSs. Even Mac users like us.

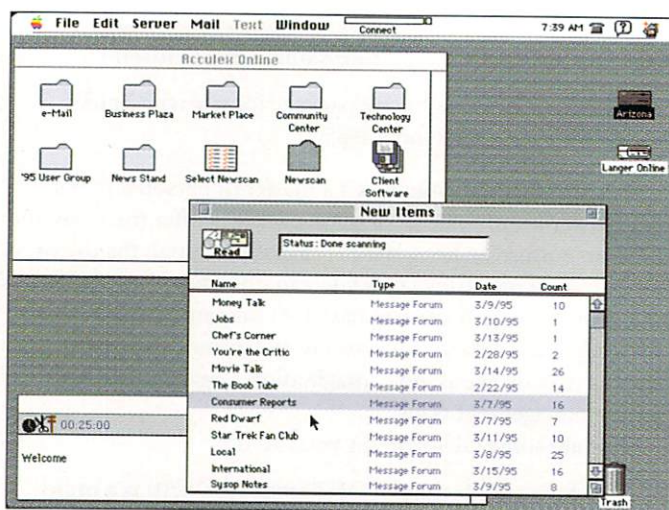

Maria Langer is a freelance writer and Macintosh consultant who has been running a Mac-based BBS since 1989. Her most recent book, The Macintosh Bible Guide to Word 6, is available in bookstores now. Contact her online at gilesrd@eworld.com.

The Bestselling Guides to Cyberspace

FIND IT!

It's 1954 and your family has just bought a television set! Along with millions of others up and down Maple Street you want to know one thing: *what's on?* Now that same question echoes out in Cyberspace. As the Net becomes an entertainment as well as an information medium, a program guide becomes an essential tool and a must-have part of the experience.

That guide is the bestselling book *Net Guide*—"The TV Guide to Cyberspace!" according to *Wired* Editor Louis Rossetto. "The book people keep stealing off my desk," says *Time's* Joshua Quittner.

We're mapping a new world.

But that's not all! As Cyberspace grows exponentially, whole new obsessions and passions are born. Thousands of games are suddenly available online and so now there's *Net Games*—your "map to the playing fields of Netdom," says *Newsweek*—and with millions of conversations to join in Cyberspace, you'll need *Net Chat*, "The best surfer's guide out there," writes *Entertainment Weekly*. Every other month, there's a new Cyber-baedeker attracting

Net Books—From Michael Wolff & Company and Random House

what the *Wall Street Journal* calls "a wide and devoted readership." This month there's *Net Money*, here to tell you how the online world can make your life easier and richer! And if you really want to visit the final frontier, you'll need *Net Trek*—truly the ultimate guide! And watch for *Net Sports*, *Net Tech*, and *Net Music*, all coming in 1995! In bookstores everywhere!

CALL 1-800-NET-1133 AND GET 15 HOURS FREE ON THE INTERNET YOUR PERSONAL NETWORK

Patterns! Color! Texture!

Netscape enhancements
brighten the Web

One fine day — perhaps you remember it as you do other pivotal moments in personal history — the nature of the World Wide Web changed. It became fuzzy, soft and at times rough as sandpaper. It became purple, and blue, and even fuchsia. It took on the appearance of a mossy rock, a piece of cloth, and old-fashioned papyrus. Yup, it was as if a batch of textural graffiti artists were set loose with a can of 3-D spray paint, leaving trails of multicolored magic across the walls of the datajungle.

The day in question came when Netscape Communications released its first public beta of Netscape Navigator 1.1 (or when you managed to get through to ftp.mcom.com, download it and boot that sucker up). Within hours of the release, pages across the Net became “patternized.” For the price of a few extra seconds of download time, pages were infused with a fresh-faced appearance that literally transformed the Web.

Since the HyperText Markup Language (HTML) coding for patterns is part of the HTML 3.0 standard, other browsers will support them, too. But Netscape, as usual, was the first one out of the box with it. While other companies were beta-testing software that attempted to catch up with disk caching, JPEG support, and image loading that doesn’t hold up the text, Netscape had fancier fish to fry. We’re talking about tables, encrypted data, dynamically updated animation and those too-hip browser background patterns.

Tour starts here

Of course, there is no point in using a souped-up Web browser if you don’t know where to point it. So here’s a guide to where the wild pages are, the ones taking advantage of these ultra-cool features:

Naturally, there are myriad examples at <http://www.mcom.com>, the Netscape site. But you can only watch Mozilla pop out from behind the corporate logo so many times before you’re ready to move on past the greasy kid stuff.

My first stop after Netscape’s site was the Cool Site of the Day, at <http://www.infi.net/cool.html>. In true form, the pages here were duly patternized. Not just the splash screen, but the FAQ as well. This collection of Networthy morsels is a great place to view patterns, particularly via its archived links. One cited site that I found was the inimitable Moon City, at <http://www.euro.net/5thworld/moon.html> — page through the

KEYWORDS

Netscape blossoms
“Secure” sites
Overheard on the Net

former Cool Sites and you'll find some other gems.

Another good place, if you have an Internet service provider that allows free Web pages, is your neighbors' personal home pages. Unlike corporate sites, individual users need not consult the vice president before changing everything to suit their latest fetish. So these pagemongers tend to be early adopters. If your provider doesn't offer this, check out some college sites and large providers. You'll find some neat stuff. For one, visit the adventurous souls (including a few Net celebrities) at the WELL in San Francisco, located at <http://www.well.com/Community/>. While you're at it, check out this interesting link: <http://204.156.22.13/>.

Speaking of interesting, how about some cream of the patterned crop. The Tampa Bay Area Guide, at <http://www.times-st-pete.fl.us/AreaGuide/AG.MENU.html>, is one of my early favorites. I may never visit Tampa Bay, but I'll page through this guide until I feel I've lived there my whole life. On the arty front, the WebMuseum link includes one of the most skillfully laid out home pages, not to mention classic art from the Louvre. High art and pop art meet at <http://sun-site.unc.edu/louvre/>.

Enough patterns. Have you ever noticed that broken key at the bottom left-hand side of your Netscape browser? Take a visit to software.net, <https://software.net>, and enjoy the encrypted security of Netscape's own Secure Sockets Layer session protection. More importantly, you'll see that dang key graphic isn't broken anymore!

You can buy encrypted wine from Virtual Vineyards (<https://www.virtualvin.com/>), or apply for an encrypted credit card (to pay for all of your encrypted purchases) at Capital One, found at <https://www.capital1.com/CapitalOne/c1-home.html>.

On the more exciting side of the Net, "push/pull" is a

buzzword you've just begun to hear too many words about. This nifty Netscape feature allows dynamic updates of data IN YOUR BROWSER WINDOW. Yes, it's the Internet equivalent of video on demand, Web style. It also can be used to update stock values, sports scores, and any other kind of data. Really, the bounds are limitless. Look for some exciting and previously un-thought of implementations to appear in this space in future months. In the meantime, for a wholly useless diversion, check out the fishtank at <http://home.mcom.com/fishcam/fishcam.html>. Hours of fun watching the fish swish by.

Now there are some who say Netscape's enhancements have gone too far. I'm not one of them, but I do admit that the people who insist that you can't enjoy their pages without Netscape's browser are usually full of hot air (among other things). Someone who agrees, Charles B. Owen of Dartmouth College, has set up a page devoted to deflating the hype and pointing out the foibles of pagemongers who make these claims simply because they bothered to center a few headlines, or use those incessant (and annoying) `<blink></blink>` tags. To see if you agree, jump over to <http://www.cs.dartmouth.edu/~cowen/netscape.html>.

Rolling the dice

Once again you're all logged on with nowhere to go. You scan all of those links in your hotlist and go, "What was I thinking when I saved these tired links?" You just have no place to turn, and if you see another search engine you'll probably lose it. (Besides, those things are always busy these days, and it's frustrating waiting to get your turn.) Why not just play a nice game of URouLette. This nifty little toy at the University of Kansas will spin you round and round and shoot you over to some places you probably never dreamt of. There is the occasional broken URL, but what do you want for nothing? Besides, when you're done (provided you're not too dizzy) you can always add your own favorite hot spots.

Give it a try. Maybe you'll stumble across my home page. Guess what: It's patternized.

Overheard on the Net:

"That URL was, like, so five minutes ago." ■■■■■

If you'd like to suggest a unique Web site, flood Dave Kramer's box at reeltime@omni.voicenet.com. Include a nifty original quote in your .sig, and you'll be a future "Overheard" candidate.

CNN Bites! Or is it *Biting*?

You Decide on CompuServe

Plus: AOL's Growing Pains
and Delphi's Educating Weaves

New to basic services on CompuServe are the weekly CNN and CNN International programming schedules. If you like the 24-hour news network, be sure to check out "Today on CNN" and "Today on CNN International" under the programming section for a complete list of the day's live events, specials and guest appearances.

You can also "Talk to CNN" without charge and offer your comments on CNN programming. Did you like a particular story? Do you want to see more about the topic? Tell CNN what you don't like as well and the changes you think should be made.

"What's New on CNN" is the place to find the latest forum information, such as the most recent library additions and upcoming conferences with newsmakers, experts, or CNN anchors and reporters. When you are tuned to CNN, click here for the latest programming schedules and bulletins about upcoming specials.

The full list of CNN Online basic services are Introduction to CNN Online, CNN Programming Schedule, CNN News Quiz, Talk to CNN, and What's New on CNN.

Cable News Network Online's extended services include the CNN Forum, CNN TalkBack Live Forum, O.J. Simpson Forum, CNN News Capsules, The CNN Sports Calendar, The Hollywood Minute, The Washington Notebook, The Entertainment Beat, Earth Matters, and Motor City Memo.

An email apology

On AOL, users who want it can get an online apology for the email and connectivity problems at America Online during the beginning of 1995.

Steve Case, President and CEO of America Online, explained in his monthly online letter to the user community that AOL's email volume recently went from a few hundred thousand emails per day to over 1.5 million per day. Case also apologized for the lateness of AOL's Web browser, explaining that AOL wanted to integrate the content on the World Wide Web right into the service so that users could browse AOL and the Internet at the same time (with like content grouped together).

Currently (as of March, that is)

KEYWORDS

Prodigy's Multi-mail

AOL's WWW offering is slated for late May and the service's two million members, I suspect, are more than ready.

Case did relay some good news, too: AOL-NET, America Online's high-speed (28,800) network is up and Sprint has added many more 14,400 modems throughout the U.S.

Additionally, AOL's European arm is getting off the ground to (finally) bring callers overseas into the fold.

New to the service is Entertainment Weekly OnLine, the interactive counterpart to the popular television show. The EW Online section features the latest news, information and schedules from the world of the stars.

What struck me about the EW Online section was the menu layout. Taking full advantage of the AOL version 2.0 menu structure, EW is organized with image maps that allow the user to click on a picture-like icon which takes them to a underlying menu item.

For example when entering the Entertainment Weekly "Guide" section, the menu is organized like a bookshelf, each spine of a book with different menu choices. The choices include, Television, Movies, Books, Multimedia and others. Clicking on a spine reveals the hyperlinked, underlying section of the service. Nicely done.

Delphi's Webucation

Delphi Internet has launched its Young America Electronic Adventure online education program. Through this program, Delphi Internet will conduct a trial run of its Web-based educational services, to provide easy access to the Internet and its wealth of resources directly from the classroom.

Delphi Internet has teamed with three partners for the project: PACT 95, one of three American syndicates competing for the America's Cup; Scott Foresman, of the educational division of Harper Collins Publishers; and Ocean Challenge, a company which interactively links ongoing expeditions with classrooms (to introduce the

Young America education program).

Designed for grades K-12, Delphi Internet's Young America Electronic Adventure "online field trips" aim to motivate children to learn about science and technology through the excitement generated by the America's Cup race. Delphi Internet will offer its 300-page Young America site on the Web free to anyone with a SLIP or PPP connection. The address is <http://www.delphi.com/young-america/homeport.html>.

Participating schools will also receive from Delphi free, trial graphical Web access software and classroom memberships to Delphi Internet's service.

The Young America launch — which follows Delphi Internet's technology licensing agreement with Netscape Communications last month — marks a key step toward implementing its strategy of publishing exciting new media properties for World Wide Web-based environments.

"Partnering with Scott Foresman, Ocean Challenge and PACT 95 has enabled us to take an innovative approach to publishing on the World Wide Web and offering educational programming on Delphi Internet," said Dr. Alan E. Baratz, Delphi Internet's CEO.

"The Young America online educational program has also afforded us an opportunity to give something back to the Internet community, which has provided such valuable resources to us in the past."

"Raising the scientific literacy of young Americans is an important part of our overall mission as we work toward an America's Cup victory," said

Rusty

Edie

Dual Eliminator

Rusty n Edie's BBS announces the introduction of their **Dual Eliminator**. Simply plug your phone line to the Dual Eliminator and then plug the Dual Eliminator into your modem. This device consists of 2 passive electronic filters that handle both high and low frequency noise from the phone line. Both high and low frequency are independently adjustable with knobs that mount on the front of the unit. Surge protection is provided by an electronic varistor.

A light emitting diode, also mounted on the front of the unit, glows whenever the device is eliminating noise from the phone lines. This device can solve the majority of noise problems associated with telecommunications today, and is sold with a 30-day, money-back guarantee. They sell for \$25 each plus \$4 shipping and handling. To order, call Rusty n Edie's at 216-726-4217, fax to 216-726-3595 or call their BBS number 216-726-2620; they will accept Visa, MasterCard and American Express.

CONTINUES ...

John Marshall, President of Partnership for America's Cup Technology (PACT) 95. "Together with Delphi Internet, we have created an unparalleled, hands-on educational environment for students and educators throughout the world."

Developed to augment general classroom curricula, the Young America online activities explore physics, computer technology, oceanography and other sciences that underlie sailing and boat building. The program also focuses on nutrition, teamwork and sportsmanship.

The online activities available through the Young America Electronic Adventure on Delphi Internet are designed to demonstrate the practical applications of science and math in the real world.

By accessing the Young America Web site, participants can communicate with the members of the Young America crew and design teams, keep up to date on America's Cup news, and take part in interactive learning adventures such as weather prediction games, contests for best boat design, treasure hunts and other online activi-

ties. Each week, the crew and design team will post personal journals providing insight on the races and exchange questions and answers with students and teachers as the races unfold. The email address for inquiries to the crew is youngamerica@delphi.com.

Multimedia in your mailbox

You may recall some time ago I raved about the neat integration Prodigy had done with sound and photos. Well, the coolness continues.

Prodigy has signed an agreement with Seattle-based FilmWorks to join forces and offer a new multimedia email service over Prodigy. The new service would allow members to send

their photos and sound clips along with text messages. It should all be under way when you read this.

Multimedia email is a hybrid of voice mail, answering machines and video conferencing. When a Prodigy member receives email, he will be able to actually see a picture of the person who sent it and hear a pre-recorded greeting, in addition to the text of the message. This is the signature file of the next generation.

Here is how the system operates: FilmWorks will develop rolls of 35mm film and digitize the photographs onto a floppy disk. Prodigy members simply put the diskette into their computers and send the photo along with their email.

The service will initially be available on email sent or received by a Prodigy member only, but the company is working on enhancements which would allow the messages to be sent to any Internet address.

The Prodigy members need Windows to send or view pictures, and a sound card and microphone to hear or record sound clips. ■■■■■

REALTIME SPORTS

Now Planet Connect brings realtime data within the reach of every BBS. Our sports data is delivered to your BBS via satellite as the news is created, so its always the latest most current information. Your users can learn about important sports events and news hours before they appear on TV or make the newspapers.

No other sports information source can match the completeness of Sports Connect. Players, teams, leagues, and more are completely covered with over 4 megs of data daily. Scores are reported as the games and events are in progress.

A variety of doors are available for most brands of BBS software and the system is designed to be fully automated.

Our satellite data systems also provide the latest files and nets plus Internet Usenet Newsgroups. Our 19,200 baud system can deliver 150 megs of compressed files daily. If you already own a satellite dish you can get started for only \$299.00..

Weather and sports are now available, Stocks and News are coming soon.

Winner of the Dvorak "Best Product of the Year Award"

We're changing the way Sysops think.

Instead of thinking of their BBS as a place to store and distribute information that may be hours or days old, the progressive Sysops that have Planet Connect can now deliver data in real time. Highly desirable data such as Sports, Weather, News, Stock Quotes, and more can be obtained from Planet Connect via satellite.

These Sysops are finding many new users who want to obtain information as soon as it happens. People that need time sensitive data will come to you, since you'll be hours ahead of newspapers, and other media. Whether at work, school, or at play your users needs only a modem and computer to quickly locate the exact data they want.

With satellite delivery, your BBS can be almost completely automated to provide services that only the big on line services have traditionally provided. Planet Connect negotiates with quality data providers to obtain data at excellent prices, and passes these savings on to you. You'll be amazed at how inexpensive a satellite real time feed can be.

Under Decency Amendment, We're All Criminals

On March 23 of this year, the United States Senate Commerce Committee passed telecommunications legislation that included an amended version of the Communications Decency Act of 1995, commonly known as "the Exon Amendment."

This draft was introduced by Senator Slade Gorton (R-VT) for his absent colleague, retiring Senator James Exon (D-NE). There are some serious problems with this bill, which I will enumerate, and readers are urged to make their dissatisfaction known in order to help kill the bill.

It's unconstitutional

The ambiguity of the coverage and defenses included in the bill leaves gaps that raise serious constitutional questions. In 1989, the Supreme Court in *Sable Communications v. FCC* established that indecent material cannot be banned entirely, and that prohibiting indecency to protect minors is an unconstitutional violation of the free speech rights of adults. Yet the Gorton/Exon bill attempts to criminalize all speech that is "obscene, lewd, lascivious, filthy or indecent." The prohibition of "filthy" speech listed in the bill has no legal authority whatsoever.

The Communications Decency bill further attempts to apply to online media many restrictions that do not apply to printed or verbal expression. Transmitting an online version of a

"lascivious" book could subject the sender to unreasonable fines and imprisonment, while mailing the book in hardcopy or reading aloud from the book would be protected under the First Amendment.

The Gorton/Exon amendment also fails to distinguish between consensual and non-consensual activities, and between private and public communications. A steamy love note sent privately between spouses could be a criminal violation of this statute, and there may be a potential for system operators to be held liable for failing to label users' private email as "filthy."

Small BBSs are virtually unprotected

While the version of the bill introduced on March 23 seems to attempt to protect large information service providers, such as America Online, CompuServe and Prodigy, by including a list of available defenses, small BBSs and other information services that cannot afford to assert these defenses in court are left without any protection at all. Operators of smaller, local systems will be unable to test the line where constitutional speech ends and crimi-

KEYWORDS

Sysops at risk
More laws on deck?
How to join the cause

nal speech begins. These small businesses of the online world are therefore put at a competitive disadvantage.

And while protections are included for systems that lack "editorial control" of the materials being sent, these protections may not apply to the majority of bulletin board systems and many other online services that provide content as well as conduit, nor to systems that present certain types of moderated forums.

Definitions are vague

The bill does not define "obscene" communications, leaving individual states to assert their own definition of community standards and to prosecute system operators maintaining systems anywhere in the country.

U.S. v. Thomas, a case currently under appeal in Memphis Federal Court — in which two system operators running a BBS in California were convicted of obscenity charges after a federal officer dialed in from Tennessee and downloaded material from the BBS — clearly illustrates the danger of leaving terms like "obscenity" undefined in an online world.

Also, passages of the bill such as "to provide users with the means to restrict access to communications" are so vague that the entire Internet is already either in violation or in compliance, depending upon interpretation. Such failures to express clearly the extent and nature of the defenses would allow prosecutors to claim and "prove" virtually any lack of such means to restrict access given a sympathetic court, leaving system operators attempting to comply with the law little guidance on how to avoid being brought up on criminal charges.

Restrictive laws not the answer

In general, passing restrictive laws is not the way to solve problems with rapidly evolving technologies like telecommunications — particularly when the laws are based on obsolete regulations of wholly different media. It is ironic that the Gorton/Exon amendment, which would chill the development of online services and communities, has been attached to a bill deregulating communications infrastructure. This deregulation has been presented as a boost to the pace of development of the very

technology to support these services and communities.

A more reasonable and realistic model for dealing with potential problems of online subject matter would be to permit online communities to establish their own standards and to self-regulate content. Parents can direct their children to areas of age-appropriate material online, where participants, including parents, engage in "neighborhood watch" activities to limit possibly offensive content. "Filtering" technologies already in development and use by online services can further help to ensure that parents can restrict their own children's access to electronically-distributed materials.

.....

Transmitting an online version of a "lascivious" book could subject the sender to unreasonable fines and imprisonment, while mailing the book in hardcopy or reading aloud from the book would be protected under the First Amendment.

Parents, not Congress or the FCC, have the right and responsibility to determine what is appropriate for their children to see, and we do not think Congress should make outlaws out of adults for engaging in speech that may not be suitable for minors. As Supreme Court Justice Felix Frankfurter ruled in *Butler v. Michigan* in 1957:

The State insists that, by thus quarantining the general reading public against books not too rugged for grown men and women in order to shield juvenile innocence, it is exercising its power to promote the general welfare. Surely this is to burn the house to roast the pig... The incidence of this enactment is to reduce the adult population of Michigan to

reading only what is fit for children.

The "incidence" of the Exon Amendment is to overly burden the free speech rights of users of the networks. Please make your voice heard and tell your Senators that you disapprove of this piece of censorship.

Make your voice heard

1. Contact the Senators from your state and all Senators on the Commerce Committee expressing your disappointment with this terrible piece of legislation. Thank Senate Commerce Committee Chairman Larry Pressler (R-SD) for not including the Gorton/Exon amendment in his proposed bill, and urge him to support action on the Senate floor to remove the anti-cyber amendment.

The Honorable _____
U.S. Senate
Washington, D.C. 20510

On the Internet, Senate directories including fax numbers may be found at:
gopher://ftp.senate.gov:70

ECHO

Sysop: Stacy Horn

Location: New York, NY

BBS Main Access Number:

Up to 14,400 BPS: 212.989.8411;

14,400 BPS and above: 212.989.3142

On Echo, it's ideas, not GIFs, TIFFs, text files or shareware, that serve as currency among members.

Founded five years ago — it celebrated its fifth birthday this March — Echo has grown from a cozy roundtable discussion attended by a about 20 friends to a 3,500-member electronic convention with a growing reputation as the online distillation of downtown hipness. And it's all built on conversation, not gigabytes of downloadable files.

"We're not a very traditional bulletin board in that sense," says sysop Stacy Horn, a former art student. "That's why we don't call it a BBS; we call it a salon. It's not about sending and receiving files, it's about conversations."

And the conversations run the gamut, taking both the high and low roads thematically. There are about 60 forums, Stacy says, in which anywhere from 12 to 400 conversations can be running at once.

She says the forums addressing

books, movies, television and other media are among the most popular. But the most popular forum discusses culture, in all its manifold forms.

The conversations can get pretty heady, she says.

"A big topic right now is ecstasy and transcendence," Stacy says. "It's pretty ethereal. People are talking about how the current mode of thinking is really ironic. How there are movies like *The Brady Bunch* and *The Flintstones*, where people celebrate ecstasy, or irony, rather than transcendence. That's the high brow. We also have forums on body piercing and tattoos — it goes both ways."

For those who wish to venture beyond these deep waters, Echo provides the Net services standard on the bigger boards: telnet, FTP, and an Internet gateway, although telnet and FTP cost extra.

For an additional charge, members can get their choice of the Netscape or Mosaic Web browsers. Stacy says the hypertext and hot button capabilities of the World Wide Web intrigue her, so she is looking to install a web-based conferencing set-up that should be online in about a year.

"I just think it's cool to have a conversation and have links within it," she says. "You may be talking about music, and may have a link to a piece of music. Or you could be talking about a painting and link to a database with the picture somewhere."

Aside from its emphasis on wetware (as in thought) rather than

hardware and software, Echo is distinctive for another reason. It is one of the few boards run by a woman, a fact Stacy says she is well-aware of.

"I have the highest percentage of women online," she says. "Forty percent of our members are women."

A New York native, Stacy majored in photography at a Boston university and returned to New York with few job prospects. She stumbled into the online world after answering an advertisement seeking candidates who worked well with machines.

"I had actually never worked with machines, but I liked the ad," she says.

The job turned out to be a trainee's position in a telecommunications company. It was a field she would stick with for ten years, before she dropped out of the corporate world and went back to being a student, at New York University's Interactive Telecommunications graduate program, in 1986. Now she's a teacher. A colleague of pioneering multimedia artist Jamie Levy, Stacy teaches a course at NYU in electronic networks.

She says running Echo became a full-time job within six months of its launch. Its Manhattan office houses three full-time and three part-time employees, as well as a bank of three Pentium PCs and a 486. Several 1.6 gigabyte hard drives contain the operation software, but because of Echo's emphasis on talk rather than file transfers, there are no plans to install CD-ROMs, Stacy says.

One of Echo's employees, dubbed

Ms. Outer Borough because of her Brooklyn address, is charged with overseeing the forums. Stacy says she was an Echo regular who eventually became a staff member.

Anyone can start a conversation, Stacy says, but ideas for forums have to be submitted to Ms. Outer Borough in writing.

"An actual forum is kind of a big deal, and we want it thought out," she says.

In addition to all the art and culture forums, Stacy says a popular forum covers the ins and outs of life in New York. She says the talk of the trendy night spots, restaurants and art galleries lends the board an urban flair that's accessible even to callers from the heartland.

"The board definitely evolved an East Coast flavor," Stacy says. "So even if you're not from New York, it feels like you're visiting. It definitely has that flavor."

Echo patronizes the arts, as well as talking about them. The board has sponsored a number of what Stacy calls "face-to-face" events throughout Manhattan. Among them have been a performance art series co-sponsored by the Whitney Museum of American Art, and a series of readings that featured such plugged-in personalities as Chi Chi Valenti, publisher of *Verbal Abuse* magazine; Kyle Shannon, editor of the Web-based magazine *Urban Desires*, and Steve Levy, who read from his book *Hackers*.

One of the more intriguing projects Echo has involved itself with is the experimental interactive television show *Electronic Neighborhood*, which airs on Manhattan public-access cable television Thursday nights.

Sponsored by Nynex and the NYU graduate telecommunications school, the program is a call-in show that accommodates up to five callers at a time. Each one is represented as a head, which is guided through a computer-generated "neighborhood" by a caller acting as a pilot.

Using the telephone key pad to control the journey, the callers can go in and out of buildings, each of which contains a new environment the

callers can interact with. Scrolling along the bottom of the screen is an ongoing Echo chat in which participants offer comments to the on-screen callers and to each other.

The heads can originate anywhere, but on the show they're together in a single electronic domain.

"It's a really neat way to make an electronic community," Stacy says.

E2B2

Sysop: Bill Taggart

Location: Overland Park, KS.

BBS Main Access Number:
913.897.1040

Modems Supported: Up to 28.8

BBS Software: eSoft's TBBS

Environmentalists say the green business is a growth business, and E2B2 is there to capitalize on that trend.

Sysop Bill Taggart says the board is meant to be a clearinghouse for information on environmental issues, an electronic shopping mall for environmentally-themed products, and an Internet-connected forum for environmentalists to get in touch with one another.

A short list of organizations represented on the board's membership rolls includes the Academy of Natural Sciences, Cornell, Indiana State and Louisiana State universities, and the U.S. Forest Service. Bill says the board is targeted — for now — at the "environmental professional."

"But eventually more and more individuals will be seeking to understand the environmental issues of the day and find E2B2 very interesting," he says.

The board is an offshoot of JT&A, a Washington, DC-based publishing and consulting firm founded by Bill's mother, Judy Taggart. It has branch offices in Philadelphia and Bill's hometown of Overland Park, a suburb of Kansas City.

Besides echoing the name of a certain famous movie 'droid, E2B2 gets its handle from a foreshortening of its official name: the Electronic Environmental Bulletin Board ("E" twice, "B" twice," Bill says).

It operates as a for-profit service, with a rate structure that covers ranges from individual to group memberships. You can try it out for free for up to an hour, but after that, you're asked to join.

Bill says the board began about a year ago, after he was approached by his mother's company to set up the service. Up until that point he had been working as a programmer for a large financial services company — a job he still holds — but had no experience with BBSs.

Researching the ins and outs of the BBS world took about a year, Bill says. He says he chose eSoft's TBBS program for its "reliability, configurability and security."

Security is not an overriding issue, Bill says, but eSoft's multiple security levels provide peace of mind against unauthorized forays by dedicated hackers.

"I've never had it happen, but if someone could drop to DOS, they could have lots of fun," he says.

When it started, the board was limited to one phone line, Bill says. Over time that has grown to four lines, feeding into a single 486-66 PC outfitted with a 1.2 gigabyte hard drive. He says there are plans to expand to 96 lines, although no timetable for that is in place yet.

Another addition planned for the board is the installation of IPAD, eSoft's Interment protocol software, Bill says. That move depends on eSoft releasing the software; when it happens, Bill says he hopes to open up E2B2's files to the world via telnet. In addition, there will be FTP, SLIP/PPP, and World Wide Web access available, he says.

Bill says he's assembled his file database from government sources and from member uploads. Many of the files have been gleaned from the Internet, having originated from such government data wellsprings as the Environmental Protection Agency, the White House and the Federal Register.

There are a handful of environmentally oriented newsgroups as well.

CONTINUES ...

As so often happens on Usenet, these groups tend to pursue their chosen topics into some pretty arcane territory. One group in particular sported 61 postings, constituting a running dialogue on the possible contamination of Great Britain from platinum ejected by catalytic converters.

The board also contains databases addressing specific concerns within the environmental movement. One, called the Watershed Information Resource System (or WIRS, for short) holds over 4,000 text files devoted to wetlands and other water-related environmental issues.

Bill says he hopes eventually to set aside areas of E2B2 as "mini-BBSs" run by some of the organizations now represented there. He says the ultimate goal is to make the board a global forum for environmentalists.

"Our society is quickly becoming a global environment. We think it is important to provide all of the environmental information that is available for all to see and respond to," he says. "And with our anticipated move to the Internet, folks from all over the world will be able to come to Kansas City, see E2B2 first hand, and it would be nice if their information was presented here also."

Starbase International BBS

Sysop: Dave Tracewell

Location: Lodi, CA

BBS Main Access Number:

209.339.0220

Voice Line: 209.367.0750

Modems Supported: Up to 28.8

BBS Software: Wildcat! 4.01

If you tend to deep read things, you might well drive yourself batty trying to find the link between Boy Scouts, astronomy and genealogy. For Dave Tracewell, the connection's obvious: those are just the things he's interested in. And what else should a board be?

Dave started his BBS, Starbase International, back in 1988, mainly as an attempt to bring the scouting movement into the online world.

"Boy Scouting is changing like the rest of the youth programs to meet

the needs of today's youth," says Dave, a 20-year scouting veteran whose son Jason received his Eagle Scout badge in 1992. "We have to keep up with the technology that's out there. We're competing not only with basketball and softball, but also with Nintendo and Sega for the youth aged 11 to 17. In order for us to compete in that arena, we have to have something boys like. And computers are obviously becoming popular."

From those beginnings, the board has evolved into what Dave claims is the largest scouting board in the world, and the nexus for a nationwide scouting web which he runs.

He has more competition now than when he started. Back in 1988, he says, there was one other scouting BBS, operating from San Jose, CA. Now there are 200 worldwide. Dave says he now has 1,000 registered users spread among 11 countries. The genealogy and astronomy areas sort of crept in as the board grew and began taking on more aspects of Dave's personality. An astronomy minor at San Jose State (his major was business), Dave used to run astronomy lectures at a local park. Dave also calls himself his family's "genealogist," and maintains on his system a database of 100 family trees that stretch back to the 1600s.

Lately, the board has taken on even more personalities. Dave says he's installed doors leading to listing services for central California real estate, and the board has become a semi-official resource for information on the municipal government of the town of Lodi.

Dave says he runs his system from a 486 PC with file areas split between a pair of 540MB hard drives and a pair of CD-ROMs. There are two phone lines leading in and he says he plans to eventually install an ISDN line, which would boost his data rates to 112 Kbps from 28.8.

Dave says Wildcat is well-suited to the many demands he places on it, and the ample technical help sitting a phone call away provides a distinct advantage over the Opus shareware he used for the first five years of his

board's life.

"Even though there are lots of Opus boards out there, they just don't have the support a professional BBS has," Dave says.

The board is organized into 20 scouting conferences, 12 reaty conferences, and seven genealogy conferences, Dave says. In addition, there are Usenet newsgroups dealing with society, the Civil War, telecommunications and, of course, scouting.

Dave says he started his scouting network, Scout Net, in a partnership with sysops in Switzerland and the Netherlands last December. Members upload their files to him, he says, and he distributes them to 15 regional scouting hubs in North America and several more overseas.

The files are typically blueprints for scouting activities of all shapes and sizes. If members want to know how to stage a court of honor, a ceremony during which scouting awards are handed out to meritorious scouts, they can download a text file describing the event from the Net. The same goes for a camporee, a program of games and competitions that can involve as many as 100 scouts.

There are also 2,000 GIFs, TIFFs and WPGs of the myriad badges and icons used in scouting available for troops to download, Dave says.

In the genealogy areas, the board's family trees are open for callers who want to research their family history and the way it intertwines with the history of other families, Dave says.

"Say, if somebody in my family had married someone with the name of Bonnifield," Dave says. "Well, one of the Tracewells back in my line married into the Dorcas. That happened to be a general during the Civil War. Going back, we found they had seven children. Someone else in the Bonnifield family might be one of the seven children. It's really fascinating to get into this stuff."

The astronomy areas contain mostly programs for tracking stars and planets, as well as text listings of BBS programs around the country. One thing they don't have are Space Shuttle shots and the breathtaking

Hubble Space Telescope images available on many Web sites.

"I don't have the cash to do that," Dave says.

Despite the diversity built into Starbase International, Dave says he's careful to screen out some of the spicier Usenet newsgroups and other features that populate the online world's thriving counter-culture. The board, he insists, is meant to be a family board.

"It's a family bulletin board you wouldn't mind your 13-year-old daughter going onto and getting into," he says.

Cult of the Tentacle

Sysop: Mike Zier

Location: Smallwood, NY

BBS Main Access Number:

914.583.6237

BBS Software: RemoteAccess 2.02

Modems Supported: Up to 28.8

The tentacle of the title belongs to a beast with which a player has to tangle in the first of the Maniac Mansion series of computer games.

That should give you some idea of what this board is all about.

Mike Zier, the 17-year-old sysop of the Tentacle, as the board is known colloquially, first got hooked by the gaming bug at the age of 11 and has spent the intervening years hatching new and devious schemes to beat them.

The board's got loads of files — over 700MB worth, plus an online CDROM — devoted to games. But if you ask, the first thing Mike will tell you about is not a game at all. Rather, it's a database of ways to cheat at them.

Called, appropriately enough, Cheat, the file contains advice on how to find shortcuts in over 260 games, Mike says. He's been collecting the cheats for over a year, he says, and has just uploaded version 21.5 of the program.

Mike says he has cheats for games sold by most of the big manufacturers, including Apogee, Sierra and Maxis.

"These are codes that they put in

for beta testing purposes, or sometimes they're put in as neat things to find," he says.

A cheat for the phenomenally successful walk-through adventure Doom, for example, shifts the player into God mode, so that his character is impervious to bullets. Another cheat allows you to conjure up cash to use in SimCity Classic.

"If you hold down the shift key and type 'fund,' you get \$10,000," Mike says. "But if you do it too many times, it will cause an earthquake, even if the disasters are disabled. If you're going to do it, do it before you build. Then do it 15 million times."

Aside from the cheats, the Tentacle also has the games themselves — or at least the shareware versions, culled from various distribution networks. Mike used to offer them from his high school's BBS, for which he is also the sysop, but about a year ago he moved the operation to his home 486.

The Tentacle has about 380 registered users, Mike says, but Cheat has been downloaded hundreds of times. Mike says callers have logged on from as far away as Venezuela and Australia to seek the answers offered by Cheat.

Access to the Tentacle is free, but new users are restricted to 45 minutes on the board. One way to gain more time online is to send Mike a picture of yourself, which he then uploads.

"Call it strange," he says, "but when I started, I wanted to see what people look like. I wanted to see the face behind the name."

Only about ten users have taken the plunge, Mike says. The pictures submitted tend to be rather staid headshots.

"There are no real strange pictures," he says. "But then again, I scan them and put them online. And you wouldn't want to be seen doing something strange there, would you?"

Steve Janas is editor and co-founder of Nexus Six magazine, the journal of gutter-tech. He welcomes news of new and noteworthy boards. He can be contacted at janas@aol.com.

FREE booklet helps you decide if a BBS is right for your company

Could a computer Bulletin Board System (BBS) make a positive impact on your sales, customer service and your bottom line? You bet it can ... and with Mustang Software's BBS Suite™, it's easier and less expensive to set up than you ever imagined!

Looking for an innovative, powerful yet cost-effective way to market your products and services, boost your sales, enhance customer service, and promote communications between employees? A computer BBS might be the perfect answer! If you own a computer and modem, you already have the hardware. Now all you need is BBS Suite™ and a little help from your friends at Mustang Software!

Leave it to the number-one name in BBS software to introduce the very first integrated package that includes everything your company needs to set up and run its own BBS.

- ▶ Give customers 24-hour access to your business!
- ▶ Fax sales and product literature with Fax On-Demand!
- ▶ Give your staff and callers access to Internet E-Mail and much more!

To find out if starting a BBS would be a profitable endeavor for your company, call today for your FREE copy of our new booklet!

1-800-663-1886

Customer service hours: 8am to 5pm,
PST, Monday through Friday

FREE!

Please allow 2-3 weeks for your booklet to arrive!
Offer expires: 3/31/95!

Recently two fellow Mac sysops here in Atlanta bid farewell to their BBSs. They decided the boards were taking too much of their time, so they closed them down for good.

One wanted more time for school and his girlfriend. The other was in the process of buying a house, doing a lot of freelance work, etc. — nothing unusual, just the everyday taxes on time. And though I understand their motives, this does highlight a serious problem facing many sysops, and begs the question: How does one deal with the stress of running a BBS, and the dreaded “sysop burnout”?

One method I suggest is trying to get together with other sysops. Many towns already have groups of this kind. Here in Atlanta, for instance, we have the OAS (Online Atlanta Society) and MOSA (Macintosh Online Society of Atlanta). While the OAS tends to lean more toward the “PC heads,” those running DOS or Windows boards, you can still learn a lot from these kinds of sysops.

Each of us has to deal with problem callers, promoting our boards, working on interconnectivity issues. But it'll do you no good to discuss these things with sysops out only for themselves, their boards (as some are), or a quick buck, so seek out sysops who've been around a couple of years making an honest go of it.

Find out what they do to promote their boards, how they deal with the stress, problem users, etc. They can also help give you ideas about features for your board, where to get supplies, Internet providers, and more — a great big brotherhood of sysops, J. Pierpont Finch!

Another way to re-energize is to visit a local user group (I know I push them a lot, but they're a great source of info). The user group meetings give you a chance to promote your board, maybe meet some of the users of your board in person, and an opportunity to show off your expertise with modems and telecommunications. Playing guru makes you feel good, and helps remind us all why we got into BBSing in the first place.

It also gives you a chance to get some honest feedback about or solicit ideas for your board.

If you are hooked into Fidonet, you can go to one of their meetings for sysops as well. This is where you'll meet people who are even bigger tech-heads than you (making you feel pretty cool in comparison). Some of these people know more about telecommunications than should be allowed, but if you have a tough technical problem holding you back, this is a great forum to get help in solving it.

Other burnout suppressors include going to trade shows or computer swap meets.

Make up some business cards, pass them out to users, dealers — promote your board. You can talk to the dealers about selling equipment through your board, getting discounts on hardware or software, or maybe make them aware of your system's existence so they can recommend you to some of their customers.

The passing out of business cards and talking to dealers will remind you that even a single- or two-line BBS should be treated like a business. If you just run your board as a hobby or as a community service, it still never hurts to promote and find new sources for equipment. I enjoy going to the bigger shows, like COMDEX, as well. It's here I find out about some of the newer advances in Mac technology, as well as get ideas for things to improve my board.

Eight days a week

Again, the biggest gripe most sysops have about running their board is the time it demands. The startup period of a new board is always going to take some serious time to get up and running, so the best thing you can do there is plan way in advance on what you want your board's emphasis to be, and design your system out on paper before you even launch your host software. After you get your board up and running, set up a schedule for the different activities that you have to do for your board, such as purging old users or messages, and such — this will help in budgeting the time you have.

Many packages these days have most of that type of activity automated. But there are still some things you have to do yourself, such as answering email. Set up a certain time each night that you answer mail and do your administration. Stick to that schedule! Save your bigger tasks for the weekend, such as designing new areas of the board. Or better yet, maybe spend 10 to 15 minutes a day thinking about ways to improve your board so you don't have as much to do on the weekends.

There are also some things you can do to help make your BBS and Mac more stable (and less of a time-strain).

Every two days or so, you need to rebuild your desktop by rebooting your Mac with the command and option keys held down. This will speed up your system by helping the Finder keep track of files on your system. Also, each month you'll need to defragment and optimize your hard drive. When the drive writes a file, it looks for the first available block of free space, and if there's not enough room there, it scans the drive for the next available block and writes the rest of the file there.

With files and messages being added and deleted all the time, files can become highly fragmented. I suggest you use either Norton Utilities or MacTools Pro, both excellent packages for the task at hand.

The important thing to remember is that even though you love your BBS and working with callers, you need to set your schedule so that you have a chance to spend time with your wife, husband, girlfriend, boyfriend, kids, or friends. Many sysops have their spouses help them with their boards, or even work trade shows together. (I know my wife enjoys going to the shows and getting free T-shirts — the ultimate freebie for us computer geeks — or receiving those nice umbrellas at COMDEX.)

The main thing is to avoid getting all wrapped up in the stresses of running a board, and instead just have fun with it.

If you have any anecdotes or stories on how you deal with sysop burnout, please send them to the email address listed below and I'll share them in a future column. Until then, keep the faith. ■■■■

TIM ENGLE, EYES RIGHT DESIGN

Dragons + Math = Fun

Summing up a cool learning game;
go to the next level of 'breakout'

Sir Addalot's Mini Math Adventure

ADDALOT.ZIP
by Landmark Solutions

Here's a great game to help your children, brothers or sisters learn math. The object is simple—beat the dragon named Scorch at his own game, a contest known as "Scorch's Castle Math."

Once the program is loaded, the player/student must choose one of four difficulty levels, then select the speed at which the game moves along (these settings allow players to customize the

game to suit their abilities). After speed and difficulty is selected, you are then shown a map of Scorch's kingdom. From here you select level 1 or 2, or the practice field. Now it's on to one of the castles to begin your adventure.

Players are presented with a grid containing numbers and equations. They must move Sir Addalot to an equation, click the mouse, then move on to the answer and click again—all the time avoiding Scorch's fireballs. When they're finished with that castle, players can move on to the next for more problems. And once a level is finished, they're rewarded with plants, fish or sea creatures to fill the moat.

This is an interesting and imaginative way to practice math. The program is loaded with colorful graphics and lots of sound effects, and should keep the young one's attention for more than a few minutes.

A 386 or higher is recommended and

a mouse makes the play much easier, though keyboard control is fine. A registration fee of \$19.95 brings 15 more castles, extra creatures for the moat, the "Story of Addalot" activity book, and the added ability to do multiplication and division (the shareware version only does addition and subtraction).

Modem Workshop version 2.0

MODWKS20.ZIP
by Steven Woas

MODEM WORKSHOP is a disk-based book created with the popular WRITERS DREAM program. Not another basic "How to get online" text file, MODEM WORKSHOP is a complete tutorial on modems, how they work, and what to do once you do get one working.

The tutorial begins with the basics like choosing a modem, selecting and determining COM ports and picking the right software. It then goes on to detail how to hook up to a BBS and the best ways to find your way around when you get there. MW also delves into the finer points of uploading and downloading, email, using commercial services, and even the Internet.

At first blush this might seem like reading for the neophyte, but it's so loaded with information that it will

probably prove helpful to just about anyone.

In fact this could well serve as a complete course on modems and modeming, at user group meetings or in the classroom. Check it out. Registration is \$19.95.

Digital Audio Executable ver. 1.0

DAEXE10.ZIP

by Tag Software

DAEXE is a nifty little program that will take a host of different sound files and turn them into executable, self-playing sound clips.

Working with .VOC, .WAV, .SND, .AU, .IFF, .DAS, and raw sound files, converted sounds can then be played with Sound Blaster, Adlibs, Disney Sound Source, or the basic PC speaker by running the file as an ordinary executable.

To use DAEXE, just type DAEXE FILENAME.EXT. The resulting playable file will have the same name as the original, but with an .EXE extension. Wildcards are accepted so you can

convert a whole directory at once.

Frankly, I can't think of many reasons why you would want self-playing sound files, but I'm sure there are a few practical applications out there, like using them in batch files such as your AUTOEXEC.BAT. Or maybe you've got a .WAV file and no Windows? Either way, DAEXE (though nothing to sound off about) is fun to toy with.

Gemstones III

GEMS311.ZIP

by William D. Rinehart

So you think you've had enough of the breakout games? I urge you to take a look at just one more before dismissing them all for the last time. You'll have to agree this one is among the best of the breed.

GEMS3 is like all the others in that it's plenty easy to play—move your paddle with the mouse or keyboard and try to eliminate all the blocks (gemstones) in each level (ZZZ).

But in GEMS3 there are several different types of gems that, when struck,

will activate all kinds of different things—more balls, for example, faster or slower balls, transporters, and more. The documentation tells you what each one will do, but playing a few rounds is the quickest way to learn.

Another thing that makes GEMS3 different from other breakout games is the "Random Level Concept." What that means is there isn't a set pattern to the way the levels follow one another. So each game is different, and you never know what level will be next.

Great graphics and sound effects also help make this game a must to take a look at. Registration is \$19.95. GEMS3 requires a VGA monitor.

Access to Internet E-mail, Usenet News and MHS (wcGATE add-on)

Access to custom Wildcat! applications (wcCODE add-on)

**MUSTANG SOFTWARE PACKS MORE INTO THE
BOX THAN ANY OTHER MANUFACTURER**

The World's Most Popular BBS Software.™

There's a reason why more than 35,000 sysops worldwide run Wildcat! This powerful BBS software is packed with more performance features than any other product on the market. Today's

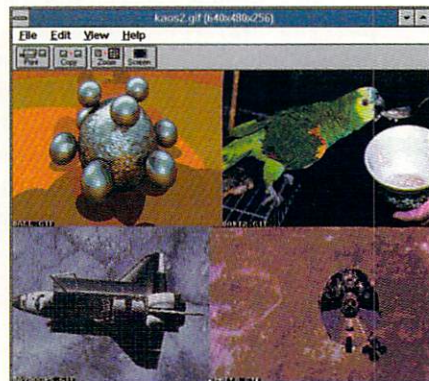

sysops know they can count on Mustang Software to deliver a complete, feature-rich BBS solution at a real value. In fact, most of the features we include as standard are an extra cost in other products. So it's easy to understand why Wildcat! has been selected by more sysops than any other BBS package.

The King Of The Online Jungle.

A centralized, PC-based system, Wildcat! lets callers send, receive and view messages and files, access external applications and chat 24 hours a day. Wildcat! 4 BBS software is available in four configurations, from single-line up to 250 total connections. So whether you're a home office-based entrepreneur with a single modem or a corporate system administrator running a multi-line customer support hotline, there's a Wildcat! version to fit your needs.

Special features in the Wildcat! base product include a .GIF thumbnailer, support for RIPscript graphics, a spell-checking message editor, support

Available through Software Etc., CompUSA, Fry's and other software outlets everywhere.

Call **800-663-1886** for more information.

for over 32,000 message conference and file areas, and remote access to all BBS sysop functions. Wildcat! also features sysop-defined language files that let callers select the BBS interface of their choice, and a BBS display screen editor (wcDRAW) that allows the sysop to customize the look of the BBS interface.

"If you're looking to set up your own electronic bulletin board service (BBS), look no further than Mustang Software's new Wildcat! BBS Suite, version 4.0."

- Padraic Boyle, PC Magazine

"Mustang deserves credit for creating a superb successor to its already impressive BBS program."

- Russ Lockwood, Computer Shopper

"To meet demand for features that allow bulletin board systems (BBS) to be tailored individually, Mustang Software's developers rewrote Wildcat! BBS software from top to bottom."

- Sherrie Van Tyle, ElectronicDesign

"Planning to build your own bulletin board system? Mustang Software's major overhaul of its popular Wildcat! BBS software can help."

- PC World

Add-On Utilities.

Mustang Software also offers powerful collections of add-on utilities. You'll enjoy wcPRO's powerful user, message and file database maintenance capabilities, including wcFAX, a fax-on-demand processor that lets callers request data and receive literature via fax. Tap into the Internet and Usenet Newsgroups with wcGATE, a sophisticated

Internet/MHS messaging gateway. wcCODE, a custom online development engine, helps the sysop to quickly develop custom applications or change Wildcat's operation. BASIC-like syntax combined with an Integrated Development Environment (IDE) make it easy to use more than 200 built-in functions.

The Wildcat! BBS Suite.

Designed to move today's corporate environment into the new world of online communications, the industry's first BBS suite includes Mustang's top-of-the-line Wildcat! MultiLine Platinum BBS software with the wcPRO database utility, wcFAX on-demand server, wcGATE Internet/Novell MHS mail gateway and wcCODE development tool kit. The suite allows up to eight BBS lines to be connected to a single PC and supports up to 250 concurrent dial-in callers. The Wildcat! BBS Suite is the ultimate BBS solution.

Get online today.

Mustang Software can help you get online faster with our special CD-ROM offer. This FREE limited-edition CD-ROM contains Wildcat! utilities plus popular shareware programs that you can make available to your callers, all of which can give you a jump start to the world of online communications. No other BBS software manufacturer makes it this easy for you. Get started today!

FREE CD-ROM FROM MUSTANG!

Now - get this limited edition CD-ROM absolutely FREE when you buy Wildcat! 4!

It's filled with thousands of the most recent shareware programs in dozens of categories and is especially configured to work flawlessly on your Wildcat! 4 BBS. To get your FREE copy, just pick up Wildcat! 4 at your nearest software retailer before July 31, 1995. Then send back the registration card along with this coupon.*

Catching Up

New BBSs to scout, software
ownership changes, hardware
announcements, new
programs to check out,
Net mailing lists, and a
term program gets its
original programmer
back at the helm

Loadstar BBS

318.425.4382, 300-2400 baud
C= C/G, ANSI, ASCII

Loadstar, the disk magazine, is now providing a support BBS for callers.

Running on a Commodore 64, RAMLink and hard drive using Image v1.2 software, the BBS offers networked mail with other U.B.A.N. (United BBS Alliance Network) systems, as well as local mail. The download areas include Loadstar disk samplers and other Commodore files, many of which are compressed using the new CKit 94 compression utilities (the file dissolver is available for download here). Also, keep an eye out for software and magazine specials — they are announced on the BBS's news system.

Phoenix Network

612.537.5077 (voice support)
612.537.5147, 9600 baud
612.537.0199, 300-2400 baud
ANSI or ASCII

The Phoenix Network, an all-platform system that's become a refuge for former Q-Link users, has undergone some financial problems, bringing an end to their use of SprintNet lines and

the 1-800 voice support line.

But games, download libraries, Internet email and Usenet groups are available here. The pricing structure is currently undergoing change, too, and at press time was \$20 a month for unlimited usage. And if a user doesn't call during a particular month? No charge.

FD4000 Drives — Get 'Em While You Can

Recently Creative Micro Designs' Doug Cotton posted a message in the CBM Fidonet echo announcing CMD's FD4000 drives were unavailable, explaining that the manufacturers of the mechanism used in the drive had discontinued their production. Murphy's Law was in full force, as not long after the message was sent out, CMD found a cache of the mechanisms in its storerooms.

As it stands, the drives are currently available, but once the mechanism supply runs out, the FD4000 will be done, gone, finished. The FD2000 drive, which uses 3.5-inch DD and HD disks will continue to be produced, however. It's recommended that those who own or purchase the FD4000 drives stock up on the 3.5-inch ED (Enhanced Density) disks this drive uses. The FD4000 will also use DD or HD disks, but is most noted for its ability to use the ED (3.2MB) disks.

CMD also announced price reductions on its HD hard drive series, RAMLinks, and a telecommunications package which includes a Swiftlink cartridge and Boca 144EW (14.4k) modem.

Desterm

C128 Term Program
Shareware: \$25.00
Matthew Desmond
Email: mdesmond@can4.rcl.ray.com

Matt Desmond has taken Desterm back (from the programmer who had taken over for him) and says he will soon begin work on adding RTS/CTS flow control for high speed modems in his shareware term program for C128 users. The new version is not yet available, but those who wish to try out Matt's original version 2.0 can look for DES200-1.SFX (thru -4.SFX). Desmond says not to ask him for ZModem (he has no plans to write any

more protocols) or ANSI music, but is open to other suggestions.

Dialogue128 Term Extension Programs Announced

Henry Sopko, who last year introduced a small program to blank the screen when using Dialogue128, has recently come out with three more extension programs. SLIDER.EXT is a game that you can play while downloading or uploading, or while waiting for your favorite BBS to clear its lines.

It's a "put the numbers in order" game with a display that can be made inactive without erasing the game from memory.

Sopko found that Dialogue128 SL (Swiftlink) users of his screen blanker and slider game had garbage appearing on the screen when used above 4800 baud, so released SLIDER SL.EXT and BLANK-IT SL.EXT to solve the problem. These files should be on most BBSs that support Commodore users, and on the online services.

Interface!

C128 Program,
Shareware: \$10
Lee Cooper
Fidonet: 1:3613/11

Interface! is a program that acts as bridge between the QWKRR128 v4.3x offline mail reader and the software used to unpack QWK mail packets. Interface! allows users who have more than one registered version of QWKRR to have all programs on the same directory. For those who have more than one BBS they read mail from, Interface! gives more flexibility over some of the aspects of offline mail reading.

The program "drives" the currently available programs to unpack the mail (NZP12813.SFX, CSX01.SDA) and lets the user predefine the disk drives where the mail can be accessed (both unpacking and reading) for up to ten different <BBSID>.QWK packets. The user can define different defaults such as intros, taglines and macros for each mail packet.

Interface! can be used for both unpacking mail or reading mail that's been previously accessed. Look for 1INTERF.SFX and 2INTERF.SFX (or possibly INTERF1.SFX and INTERF2.SFX).

C*Base 64 BBS Software Under New Ownership

C*Base 64 v3.x
Jerome P. Yoner
#4-361 Maryland Ave
Brandon, MB
R7A 6R6 Canada

Jerome P. Yoner, the person behind Phantom Software, has added C*Base 64 BBS to his list of software he supports. An established programmer, Yoner runs his Talisman BBS with C*Base v3.2 and over 450MB of files for downloading, and has just recently taken the helm from C*Base's original author, Gunther Bierznieks.

Currently, Yoner is working on updating the BBS's network module to reduce long distance costs for C*Base sysops. He stated that any person who purchased C*Base v3.x will receive full support from him and a re-registration fee will not be required. The full BBS package, including BBS, Tech Guide, special compiler, network module and all the online games he has available goes for \$65 U.S.

Commodore Mailing Lists on the Net

Commodore users with Internet email can subscribe to mailing lists and receive news, information and all kinds of support.

Although not strictly Commodore related, C/PM is just one of the C128's operating systems. For those interested in receiving the C/PM list, write to "listserv@vm.its.rpi.edu" and leave the subject field blank. Type the following in the message: "subscribe cpm-l first-name lastname".

Most mailing lists have two addresses: one which you use to subscribe to mail and one to use when sending a reply or message to all users on the list. To find out more about other things you can do and access through any list you join, try sending a message to the administration address with the word "help" as the message.

Also, be sure to save the message you receive once you join a mailing list. This tells you how to unsubscribe from the list if it grows old in your mailbox

CONTINUES ...

(many people forget to save this information and then have a hard time unsubscribing — don't make this mistake). Other lists include:

CBM-UNIX, a discussion group concerning alternative operating systems for the Commodore that have a UNIX look and feel, such as ACE.

Admin address: mailserv@lists.funet.fi

Body of message:
subscribe cbm-unix firstname lastname

Send mail to the list at this address:
cbm-unix@lists.funet.fi

OLD-CBM is a list concerning older Commodore equipment such as PETs, the VIC-20, Plus 4 and C16.

Admin address:
mailserv@lists.funet.fi

Body of message:
subscribe old-cbm firstname lastname

C64-HACKERS concerns programming issues dealing with topics such as timing and special opcodes used in programs.

Admin address:
mailserv@lists.funet.fi

Body of message:
subscribe c64-hackers firstname lastname

Mail list address:
c64-hackers@lists.funet.fi

COMMODOR is for all Commodore 8-bit computer conversations. The list is supposed to mirror the discussions on the comp.sys.cbm newsgroup, but it doesn't always do so.

Admin address:
listserv@ubvm.cc.buffalo.edu

Body of message:
subscribe commodor firstname lastname

Mail list address:
commodor@ubvm.cc.buffalo.edu

C65LIST Yes, there really WAS a C65 computer, though it was never put on the market. Still, a few thousand people were able to buy the prototypes when Commodore started dumping their stockpiled equipment. This list is for the owners of such systems, and there are files available through this list to C65 owners.

Admin address:
C65list-request@robin.dce.vic.gov.au

WARNING!

**This Product Contains Material
Of An Extremely Graphic Nature.**

You can view RIP graphics, including icons, buttons and animation, on any RIP-supporting BBS.

QmodemPro for Windows' zoom feature lets you get up close and personal.

Point and click on the Windows dialing directory icons to get online.

QmodemPro for Windows delivers more advanced graphic features than any other communications software.

When it comes to graphics, nobody does it better than Mustang Software.

Our award-winning QmodemPro for Windows communications software has all the cool graphics features you've been looking for. It's "RIP" ready,

so you can plug into the thousands of BBS systems offering graphics and full mouse support online.

QmodemPro for Windows was the first commercially available product in the industry to support RIPscrip. QmodemPro for Windows also has a built-in GIF viewer that lets you view GIF graphics files as you download them. You can even ZOOM in for details. And QmodemPro has Windows icons for dialing directories, a true Windows phonebook. All you have to do to get online is double click on an icon.

No other communications software delivers graphic features like QmodemPro for Windows.

Recommended by Sysops everywhere.

But graphics aren't the only reason Sysops around the world recommend QmodemPro for Windows. They like it because it's powerful and easy to use, and can launch both data and fax calls. What they like most, though, is the fact that QmodemPro for Windows is packed with performance features that have been specifically requested by BBS callers.

At Mustang Software, we listen to our customers. And build their valuable comments into our products. All the outstanding features in QmodemPro for Windows today came from callers just like you.

If you're looking for graphic features, pay attention to the warning. QmodemPro for Windows by Mustang Software.

Available through Software Etc.,
CompUSA, Fry's and other fine
software outlets everywhere.
CALL 800-663-1886 for more information.

Against the Clock

The Mage lines 'em up
for a contest of 0 to 28.8

Part of the fun of being a Mage is the ability to travel both forward and backward in time. I mention this because while I'll mainly look at modem horsepower and throughput this month, I'd also like to re-visit a previous article where I probed connectivity and its variables.

Modem code has gone through several revisions and I feel compelled to give a second look at basic connectivity figures. Let's take a look at some real bit crunching, baud-breaking tests and see which performers shine and which trail behind.

The tests, as detailed below, were performed under two methods. One was a real-world shake-down. To simulate Joe User I called my local telco, ordered a new telephone line, ("yes operator, billed to Modem Mage") and jacked in.

I also tested under a controlled environment using an LS-100 line simulator set to an ideal line level. Under these conditions I tossed each modem into the grinder and waited to see what came out. The net results are enlightening.

These new connectivity tests make it quite apparent that folks in dark corners of programming labs are catching on, but many are still more in the dark than they should be.

The modems tested are representative of what you may find on shelves today, and also reflect what mail to the

Modem Mage indicates are the current modems of choice for sysops and other information providers. Modems were tested in the most scientific order possible...randomly. Which is also the order in which they appear below.

Each modem was subjected to at least 900 connection attempts (good thing I have all of time at my disposal), some longer if I fell asleep at the test bench.

What this all boils down to is a few interesting trends, the result of which places the Microcoms and the USRs as real contenders for the Mage's "Modems of Choice." Boca, Supra and Hayes all come close, but fall short in connectivity and especially in protocol negotiation.

(For this test I disqualified any non-28.8K capable modems. I used two of the ITU-accepted file transfer test files — 5X16.TST is a highly compressible file and shows the compression capabilities and real horsepower of the modem; 4X04.TST is a highly compressed file and should give you a feel

* Modems with an asterisk include 14,400 baud FAX send/receive at no extra charge!

Notes on Table I:

1. All internal modems are assumed to be PC-AT ISA bus unless otherwise noted. Some manufacturers do not offer internals; be careful when ordering.
2. Consult manufacturer for details on availability of Caller ID or voice-mail processing options (any modem above).
3. These prices NEVER include shipping and handling, which is always extra, typically \$5 - \$15 U.S. dollars.
4. V.34 is International (ITU-T) standard for 28.8K. This is not the same as V.FAST (generic name) or V.FC (Rockwell based 28.8K standard).

for how a typical ZIP/ARJ type file would transmit.)

These tests were all done at the highest speed I could get from a real-world (live telco) connect, and was averaged out over a minimum of 10 such file transfers. Throughput figures were rounded to nearest 50. All figures are representative of Characters-Per-Second (CPS).

Modem	5X16	4X04
Boca V34	8100	2700
Supra V34	8200	2750
Microcom ES VFC	8550	2825
USR Sportster V34	8200	2800
Microcom LCD VFC	8250	2750
USR Courier V34	8750	2850
Hayes Optima V34	8700	2850

When we compare these results with the above connectivity figures, we paint a much clearer picture for modems of choice. There are clearly some performance issues to analyze. Balance between horsepower and modem smarts (connectivity) is crucial, especially for the sysop.

Are you willing to sacrifice performance and/or connectivity for price? Is cost no issue when compared to reliability? Next month we'll take a look at some other key issues to consider as a BBS sysop or information provider. As you read this, the Mage is becoming a regular on the Online Support offerings from Hayes, USRobotics, BOCA, Supra and Microcom. I'm also running the stop-watch on their customer support lines. The results are coming next month.

Sysop/Provider programs

I've included a couple of basic charts to help those who believe a picture (well, chart) is worth a page or two of rambling text.

The minimum performance level is v.32bis (14,400 bps), but will soon be displaced by V.34. All modems also must have v.42bis for error correction and data compression to make this list. The rightmost column of Table I shows all modems faster than 14400 bps that support at least v.32bis standards.

I recommend only V.34 for sysops. End-users can economically afford to now live by the same standards. The

Modem	Good	None	Lost	28800	26400	SPEED			Other	LAPM	PROT	
						21600	14400				MNP	NONE
Boca V34	99.35	0.1	0.55	99.2	0	0.8	0	0	0	94	3	3
Supra V34	99.9	0.1	0	99.3	0.7	0	0	0	0	0	0	100
Microcom ES Deskport VFC	97.1	2.9	0	99.4	0	0	0.6	0	0	100	0	0
US Robotics Sportster V34	100	0	0	100	0	0	0	0	0	100	0	0
Microcom LCD Deskport VFC	99.8	0.2	0	97.5	0	0	2.5	0	0	99.9	0	0.1
US Robotics Courier V.34	100	0	0	100	0	0	0	0	0	100	0	0
Hayes Accura	100	0	0	0	0	0	100	0	0	98	0	2
PPI LCD 144	99.2	0.8	0	0	0	0	98.4	0.8	0	94.9	0	5.1
Hayes Optima V.34	96.5	3.5	0	96.8	3.2	0	0	0	0	95.3	3.3	1.4
Modem	modem tested											
Good	CD still up after 15 seconds											
None	No CONNECT message in 45 seconds											
Lost	CD lost within 15 seconds of connect											
Speed	percentage of connects at the indicated rate											
Prot	percentage of connects which negotiated at the indicated protocol											
	<i>All numbers are representative of a percentage.</i>											

V.34 ITU-T standard offers 50 percent more throughput than v.32bis, at only minimal cost increases. It also offers a better chance at a high-speed connect (24,000–28,800) than VFC under minimal line conditions. Beware of upgrade plans to v.FAST/v.34 modems; various

manufacturer programs vary greatly.

More than a modem

Some vendors offer more than just modems to the sysops joining their program. For example, US Robotics offers substantial discounts off their

CommServer 486 LAN product. Other vendors, such as ZyXel, offer big discounts on modem rackmounts. A rackmount reduces the tangle of multiplying power supplies and becomes

economical for sysops planning on larger, multi-line systems.

Buyers' restrictions

If you maintain a system operating 24-hours per day for the last six months, then you're eligible for any of these discounts. Some manufacturers only require that you are currently running a BBS at time of ordering. A few may actually waive the current operating requirement.

Once you receive your modem, you're expected to keep the BBS up and running between six and 12 months (requirements vary). Generally, the modem is yours to do whatever you want with after this period expires. Some manufacturers may ask you to never sell modems purchased on a dis-

count plan. Modem resellers, such as computer stores, are generally excluded from participation in discount plans.

Nearly all of the modem vendors are accepting VISA and MasterCard for orders. Some also accept a cashier's check or money-order for prepay orders. Personal checks often require additional clearing time which just holds up your order. C.O.D. is becoming less common, and is rumored for phase-out by several of the larger players over the next few months.

One requirement, which goes for nearly all vendors, is that they generally expect at least a one-line advertisement somewhere in your welcoming screens. For example: "Using the finest Model XYZ modem from Acme Modem Co." would be perfectly acceptable in all cases.

Order processing and availability

Delivery times and schedules vary radically, so your mileage may vary. Many manufacturers are placing orders on hold until they release V.34. Hayes typically shipped in 48 hours, and to the far extreme, US Robotics guarantees a two to six week waiting period.

For Canadian, European and other sysops outside the U.S., you may or may not be eligible for discount offers. Please check carefully ahead of time to avoid disappointment. You may want to check with their European subsidiaries before contacting the U.S. office. ■■■■

GET CONNECTED

Virtual BBS™

Multi-Network

Virtual BBS offers unsurpassed BBS networking power and flexibility. Included as standard with every Virtual BBS package are interfaces for Internet and VirtualNET. Adding additional networks, network types, and setting up gateways between networks is easy, thanks to our unique Multi-Network Engine.

Configurability

As your needs change, Virtual BBS grows with you. Definable menu blocks and an extensive built-in programming language are just some of the ways in

To try listing all of our features in a half-page ad wouldn't do us justice. So, try the DEMO and let us know what you think.

VIRTUAL COMTECH INTERNATIONAL, INC.™

4246 ELIZABETH AVE.
HOLLAND, MI 49424

616-399-8934 VOICE/FAX
616-399-4818 DATA

which you can customize your multi-user Virtual BBS system. The package also includes support for multiple languages and system operator editable "strings" so you can fully modify the output of your system for the ultimate desired presentation.

Free DEMO

To receive a complimentary, fully operational DEMO version, call us at (616) 399-8934. To download the latest DEMO, call our multi-user Virtual BBS system at (616) 399-4818.

Feature Packed

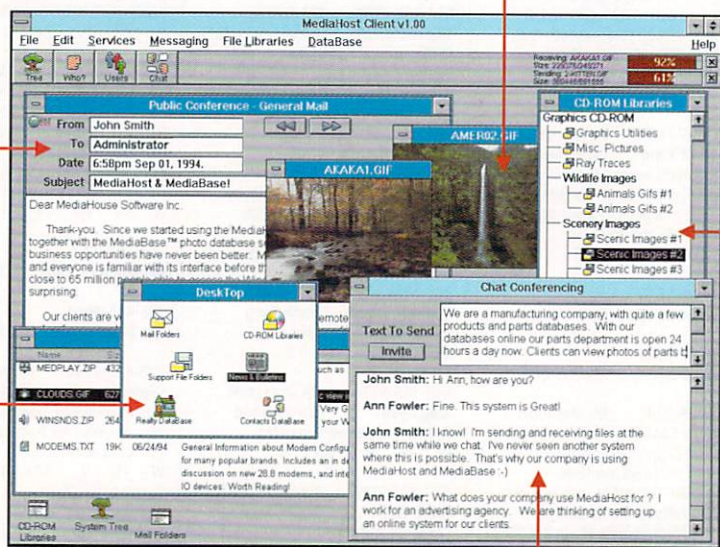

We've listened to our customers over the years. We've worked hard, and will continue to work hard to produce the BBS software that you and your callers want to use. Times change and we feel it's important to keep up.

Put Your BUSINESS ONLINE ...

E-MAIL - Private and public message areas, user mail boxes, and file attachments all in an easy to use word processor style editor.

Users can preview graphic images from CD-ROM, hard drive or any other mountable volume.

Send and receive files while using system features such as chat, and e-mail.

MEDIAHOST

Online Server for
Windows™

Provides
Email
Chat
Bulletins
File Libraries

Menus, templates and screens are visually designed to suit your requirements.

Multi-user chat with Clipboard support and scroll back.

Support for Push Button, Floating Icon, Item List, and Tree List menus.

...with High Impact PHOTO DATABASES.

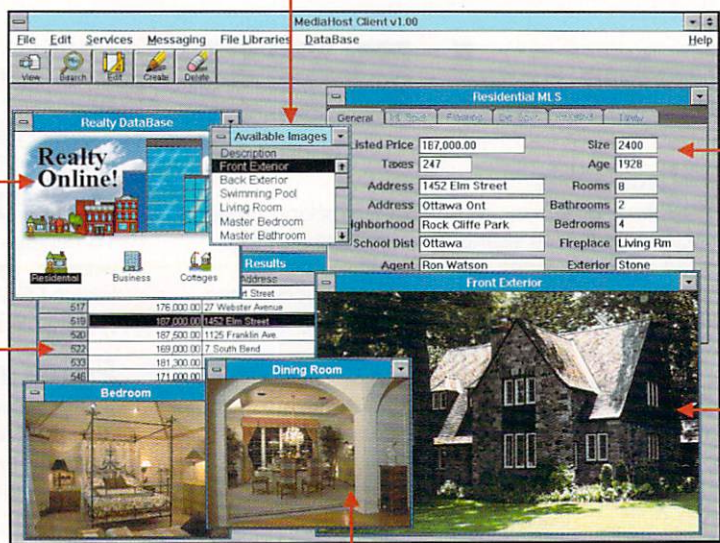

Custom database menus are easily created in the MediaHost Visual Designers and Icon Editor.

Memo fields and up to fifteen images or text files can be displayed for each record in the database.

Custom templates can be created to display database records. You decide what fields your clients can view.

MEDIABASE

Ideal for
Cataloging
Marketing
Works with
dBASE®
FoxPro®
Clipper®

Databases and query results are displayed in a spread sheet view which is used to quickly browse through records.

Images are sent seamlessly in the background using the MediaHost bi-directional protocol.

MediaBase offers support for multiple high quality 24 bit images, for each record in the database.

Clark Development Presents...

The 1995 PCBoard / Online Communications Conference

*Prospector Inn Resort, Park City, Utah
September 21 - 24, 1995*

Thursday Evening Keynote Dinner

"The Future of Online Communications and PCBoard." Attendees will experience the next generation of online communications software from Clark Development - an exciting introduction to the future for sysops and users alike.

Space for the keynote dinner is limited to the first 425 registered attendees and their companions. Don't miss out! Register early.

Friday & Saturday Morning and Early Afternoon

Spend the morning and early afternoon learning from the experts. Scheduled sessions cover a broad range of topics, including connectivity with the Internet and X.25 networks, Fido, UUCP, QWK Mail, PCBMail, PCBFile, Credit Accounting, Security, DOORs, System Configurations, Beginning, Intermediate and Advanced PPL Programming, plus business sessions on Marketing, Legal, Taxes and Accounting.

Friday & Saturday Afternoon and Evening & Sunday Morning

Session rooms will be open for vendor demonstrations, birds of a feather meetings, and one-on-one hands on training with each other and the programming and tech support teams from Clark Development. Or you can enjoy the many activities that the Park City area has to offer, including golfing, hiking, mountain bike riding, motorcycle/ATV riding, horseback riding, go for a hot air balloon ride or sled down the mountain on the Alpine Slide!

For more information or to register for the 1995 PCBoard / Online Communications Conference

Clark Development Company, Inc.

3950 South 700 East, Suite 303, Murray, Utah 84107

Phone: 800-356-1686 or 801-261-1686

BBS: 801-261-8976 **Telnet:** 199.67.41.2

Fax: 801-261-8987 **Email:** sales@saltair.com

The resort has hotel rooms, studio's, lofts, and one, two or three bedroom condo's. Make plans now to attend and bring several people from your organization or plan a vacation in Park City and bring the whole family. Register early for the best selection.

For a Park City vacation planner call the Convention & Visitors Bureau. 800-453-1360 or 801-649-6100

And we'll see you in June at Cyber.Xpo.95!

Education - June 4-6

Exhibits - June 5-6

**Sahara Hotel & Casino
Las Vegas, Nevada**

Finally! A west-coast trade show for the online industry and Clark Development will be there to show off the latest developments in PCBoard and online communications!

You'll meet the top suppliers in the industry, attend seminars, see the newest products, take advantage of show specials, and enjoy industry awards, receptions, hospitality suites and networking opportunities.

Join us in Las Vegas this June for the only major west coast trade show for sysops and the online industry.

For more information or to register for Cyber.Xpo.95

BBS Magazine

BBS Magazine is not only your ticket to the evolving information highway, it's also your road map.  With features on the latest in bulletin board software, interviews with top industry insiders and news and reviews of everything making its way into cyberspace, *BBS Magazine* has become required offline reading for anyone getting online.  Each month we look at the best and brightest BBSs, as well as those just getting started, and review the most informative books on BBSing and online services. Every issue features our expert columnists commenting on all aspects of life online. From the best deals on modems to our look into the Internet—it's all there. *BBS Magazine* is written for you, the BBS caller. The stories are exciting, informative and often entertaining.  We won't waste your time, but we *will* get you connected.

Subscriptions: 1 year US — \$30. Canada — \$50. 2 years US — \$50. Canada — \$90.

while Linux is top-quality freeware with a tremendous following among Internet users."

The Major BBS for UNIX began shipping in January with support for two operating systems — BSD/OS 1.1 for the PC architecture and Solaris 2.3 for SPARC platforms. New versions are now available for the following: BSD/OS 2.0, Solaris 2.4 x86, Linux 1.1 and SCO6 ODT 3.0.

As a limited time promotion, Galaticomm is offering special "get-acquainted" prices on all editions of The Major BBS for UNIX, with the new four-line Linux edition priced at \$995, for instance. The eight-line versions are \$1,695 (\$855 less than usual) and the new 16-line version runs \$3,195 during the promotion.

The Major BBS for UNIX's multilingual/multiprotocol architecture supports up to 50 simultaneous languages or graphical protocols, and the Spanish Language Add-on Option (\$295) capitalizes on this by allowing users to choose Spanish as the language for messages and prompts they see on the system.

The Entertainment Collection (\$495) turns The Major BBS for UNIX into your personal entertainment system, with a suite of text adventure, ANSI-graphic and teleconference games. And Action Teleconference enhances the teleconference with action verbs for users.

The UNIX division can be reached via email at unix@gcomm.com. For a hands-on demonstration of The Major BBS for UNIX, telnet to Galaticomm's UNIX Demo System at unix.gcomm.com.

Motorola-Galaticomm Sysop Deal

Motorola Transmission Products Division has partnered with Galaticomm to offer discounts of up to 40 percent on selected modems and ISDN terminal adapters for qualified BBS operators.

Galaticomm is currently the only company in the online industry offering sysops a complete compatibility tested, modem-software BBS.

"Our focus is to deliver the highest performance platform for launching an interactive online service on a single 486 or Pentium-class machine," said Brinker, who pointed out that late last year they "partnered with Equinox Systems Inc. to deliver the power and performance of multiport hardware to our software. Now, with the addition of Motorola's technologically advanced modem products, we can offer a complete plug-and-play solution for supporting huge numbers of simultaneous users on a single PC."

Under the program, Galaticomm will supply qualified sysops, Internet access providers (IAPs) and World Wide Web (WWW) providers with Motorola V.34 modems or ISDN TAs in a single purchase — eliminating their need to specify, purchase and test modems, TAs and software separately when launching services.

The program allows for the purchase of a Series 28.8 modem for the retail market for \$225 — a 40 percent discount off the list price of \$375. A 40 percent discount is also available for the Macintosh model that lists for \$395. Under this sysop program, the Motorola V.3400 commercial/industrial modems that lists for \$895 will sell

for \$537. For ISDN access, the program offers two ISDN terminal adapters, the TA210 and UTA220, for \$297 — 40 percent off the list price of \$495.

Eligible sysops and providers must be in continuous operation for at least six months from the time of purchasing the Motorola hardware and have purchased software from an approved vendor such as Galaticomm and comparable companies.

"The Internet and online BBS services are major driving forces in PC communications, from the corporation to the individual home user," said Dave McNamara, director of product development, Motorola Transmission Products. "The teaming of Galaticomm and Motorola... will give Internet access providers, Web site providers and BBS sysops the best of both worlds in hardware and software to meet this exploding demand."

Galaticomm products are available from resellers or by calling the company direct at 800.328.1128, or 305.583.5990 outside the U.S. and Canada.

Multimedia Extensions Added to Worldgroup

Galaticomm plans to include a free collection of multimedia extensions with the Worldgroup online interactive platform, giving sysops the ability to run an online service — with multimedia effects matching the best of World Wide Web — from their desktop PC.

The extensions also include a "launch" client/server module that

downloads and launches files, such as Word documents and PowerPoint presentations, by clicking an icon on the menu.

The Worldgroup Client/Server Development Kit enables system operators and independent software vendors to create plug-and-play client/server add-ons using Visual Basic on the client side and Borland C++ on the server.

To prove the flexibility of the client/server model and to demonstrate the ease of Visual Basic extensibility, two Galacticom engineers took a three-day weekend to explore the possibilities of multimedia enhancements to the first release of Worldgroup. The result of their 72-hour adventure is a new collection of multimedia extensions.

"The real power of Worldgroup is

its extensibility," said Brinker. "In a very short period of time, we created stunning multimedia effects with WAV or MIDI sound files, a configurable splash screen, real-time video and more. The power of Worldgroup as an online development platform is just beginning to be unveiled."

In case you missed the March issue of *BBS Magazine*, Worldgroup's shareware client runs on Windows and includes: email, group message forums, file libraries, multi-user teleconference, and polls and questionnaires. In addition, RIP, ASCII and ANSI users can also access the system, providing the widest possible access.

When a caller first contacts the system using the client software, a "splash" screen will display a graphic image. The system operator can use any Windows BMP file, Windows Metafile (WMF), or Windows DIB file to create welcome screens with the organization's logo, an animated design with colors that change and swirl in real-time, etc.

These files can be designed using off-the-shelf programs, such as Corel Draw, PC Paintbrush and Adobe Photoshop. System operators can also convert images from other formats,

such as PCX, TIF and JPEG, using programs such as Paint Shop Pro, (if the sysop has the proper license to distribute those images).

Sysops can also configure WAV and MIDI sound files to be played when the user sees the splash screen. For example, a corporation could play the company jingle, while an online university could play the school song. A timer and/or user-clickable button can transition from the splash screen to the main menu. BMP, WMF and DIB files can serve as graphic backdrops for each client/server menu.

And the main menu can be "pseudo-maximized," to take up the full area of the main menu applications window, as a backdrop for child menus.

Sysops can also choose to have all menus maximized, but callers have the option of changing this default if they wish. When the system operator changes the backdrops, the client will automatically download the new one in the background while the caller moves on into the service.

A new Windows file launcher module lets the system administrator post a file for client/server users to download by clicking on a menu icon. After the file is downloaded, this module launches the application associated with that file's extension (e.g., launches Microsoft Word to display a Word document). If the user doesn't have that application on his machine, a window will pop up.

This feature makes it easy for users to access files right off the menu — AVI movies, Word documents, Excel spreadsheets, Adobe Acrobat files, PowerPoint presentations, WAV and MIDI sound files, and Write files. ■■■■■

BBS INCOME

Free Report on how to go from \$0 to \$3,000 per month in BBS income in as little as 90 days!

This valuable report reveals money making information on how to operate a BBS for profit. It outlines powerful marketing secrets including unique ways of finding new subscribers and how to get them to pay you top dollar; guaranteed ways to generate other revenue plus the secrets to getting free publicity and being able to accept credit card payments; plus much more. Limited quantity.

They couldn't top Synchronet.™

So we did.

Introducing Version 2.0

PCMS™

Synchronet v2.0 unveils PCMS, the Programmable Command and Menu Structure. At the heart of PCMS is *Baja™*, an easy to use basic-like programming language and compiler that allows flexible command shell programming without external programs or add-ons. Because compiled command shells are loaded dynamically upon user logon, multiple BBS structures can be available for your users to choose from; including emulations of other BBSs, complex graphical user interfaces, foreign language shells, and custom applications.

SMB™

Version 2.0 provides a level II implementation of the new SMB message base format for high speed, high volume, multi-network message storage and retrieval. SMB is highly extensible to support future needs including multimedia!

OS/2

Coming soon! Synchronet for OS/2, the 32-bit big brother of Synchronet for DOS. Finally, a powerful and feature rich 32-bit BBS will soon be within your grasp.

* for 8 nodes Wildcat!IM requires a 250 node license, PCBoard/M requires a 10 node license, TBBS requires a 16 node license.

If you haven't checked out Synchronet yet, crank up your modem and download a demo. There isn't a faster, more feature rich BBS available anywhere from anyone. Synchronet combines the robust interactive nature of a multiuser BBS with the speed, power and flexibility of a multinode system.

It was innovative out-of-the-box features such as intelligent variable timeslicing, ARS™ security, RIPscrip, enhanced CD-ROM, and easy to use fully integrated message network support that made Synchronet a multinode powerhouse. And now, with version 2.0, custom programmability, lightning fast high volume messaging, and much more makes Synchronet *the* sysop's choice for BBSing in the 90's.

Synchronet BBS version 2

Multinode Bulletin Board System Software

It's Not a Bug, It's a Feature! Computer Wit and Wisdom

by David Lubar
202 pages, \$9.95

You don't have to be a computer geek to get a kick out of compiler David Lubar's "It's Not a Bug, It's a Feature!" (Addison-Wesley). Certainly there's a point of reference necessary to understand or put in context some of the notable quotables he's collected, but not with prescient jewels like: "There is no technical reason why someone like Sears Roebuck should not come out tomorrow with an appliance selling for less than a TV set, capable of being plugged in wherever there is electricity, and giving immediate access to all information needed for schoolwork from first grade through college." — Peter F. Drucker, 1968. Or "I see a world market for about five computers." — Thomas J. Watson, Sr., former leader of IBM, 1947.

The book is divided into several chapters such as Software, Bugs and Glitches, Kids, and The Age of Information. And all are not necessarily knee-slappers. For instance in the

chapter Waiting in Line to Go Online David Martin complains "The Information Superhighway is a misnomer. First, there's no highway — there are no roadmaps, guides, rules. And second, it ain't super." That was in 1994. To show how near we've come in 25 years, Lubar follows that with a statement from Nigel Calder in 1969: "Like a new road that can bring fresh life to a remote area or merely make it easier for the local population to leave, the information network is a two-way system."

Many are not as pithy as these, but Lubar does a nice job of assembling funny, surprising and sometimes head-shaking morsels. And some come across today as near absolute truths.

"The impact of cheap, reliable, fast and universally available information will easily be as great as the impact of electricity." Drucker, 1968.

Internet E-Mail

by Ted Alspach
152 pages, \$14

Internet Chat

Donald Rose
200 pages, \$14

Internet Virtual Worlds

Sean Carton
224 pages, \$14

Ventana has released three more in its line of Quick Tour paper-bound handbooks, which left off with Mosaic Quick Tour. This time the subjects are email, chat and virtual worlds.

The Quick Tours are written for

newbies and the moderately interested, with non-technical advice, graphical overviews and a little history.

The E-Mail Quick Tour looks at setting up an email account, locating email addresses, security, etiquette, mailing lists and newsgroups. Chat covers IRC

(Internet Relay Chat), where participants from around the world hold group discussions in real time, and IRC resources like chat clients and servers, as well as IRC Yellow Pages.

The Virtual Worlds Quick Tour takes on some of the fringe activities of the Net: MUDs, MOOs and MUSHes. These Multi-User Dimensions, MUD Object-Oriented and Multi-User Shared Hallucinations are environments in cyberspace where thousands come to play games, role play and basically goof off.

Each of the three volumes is integrated with an Internet-based Online Companion — a continually maintained site on Ventana Online's server that offers access to free utilities and links to current resources on the Net. Also, Chat and Virtual Worlds include hyperlinked versions of chapter listings on the server. Check the home page at www.vmedia.com/.

The Professional BBS Service Bureau

Bulletin Board Systems (BBS) are fast becoming a vital tool for information exchange in corporations, associations, government and other professional organizations. Yet the learning curve and related costs for an in-house installation are steep. Not to mention the staffing required for continuous user support.

APDI has the solution!

APDI will implement and operate your BBS at our state-of-the-art Service Center. We provide all of the hardware, software and communication facilities required to make your system successful. APDI also provides a fully staffed "help desk" to assist your callers in connecting to the service and navigating its functions. All you worry about is providing the data, keeping it current, marketing the service and reaping the benefits.

APDI operates dozens of successful professional BBSes. We assist in all phases of the project from BBS design to implementation to user support. APDI selects the BBS software which best fits your application. We also provide your users with multiple connect options including toll call, 800 number, Internet, and CompuServe's x.25 packet switching access. We can even allow access to your BBS via a World Wide Web Home Page! We have hundreds of fiber optic phone lines and will assign to your system the number you need. Call us today and find out why APDI is the nation's leading Professional BBS Service Bureau.

Mark Burnett at APDI's BBS Service Bureau

ATTENTION: Consultants, VARs, Resellers

APDI announces its BBS Reseller Program!!!

Participate in the online revolution by providing your clients with customized Bulletin Board Systems operated by APDI.

You have the clients and contacts, you have the application knowledge and expertise. APDI has the resources to create and operate customized BBSs for your customers at our BBS Service Center. Let's work together!

Associations, Publishers, Financial Institutions, Corporations, Government Agencies... all have applications for online services which are easily cost justifiable. APDI will help you to recognize these applications and present a BBS solution. APDI then does the implementation and operation. You become a player in the online industry and incidentally, generate income.

Check our references and compare!

Online Full Text Searching

Need full text indexing and searching on your BBS?

APDI has the answer! APDI has developed Cheetah, the world's fastest and most powerful full text search program specifically designed for online systems.

Cheetah enables you to search online data collections using Boolean and proximity search phrases, searching megabytes of data in fractions of seconds. And Cheetah's interface, menus and setup are fully customizable to present your board's look-and-feel.

Searches may be conducted across one or multiple databases. Images may be attached to the data and unlimited hitlists are supported. Cheetah works with virtually all popular BBS programs.

Call us today to learn more about Cheetah!

More Great News From The Communications Experts.

Mustang Software announces the newest addition to its growing family of online products: **Off-Line Xpress (OLX) for Windows v. 1.0.**

This powerful off-line mail reader combines the functions of QWK mail utilities with the point-and-click ease of the Windows environment. With

OLX for Windows and your communications software, you can manage your BBS messages better than ever

before. Simply download your messages from the BBS QWK mail processor, disconnect from the BBS, then start your off-line session with OLX. When you're finished, just upload your replies and new messages on your next call. You'll spend less of your precious on-line time and money reading mail, which gives you more time for file transfers, chat and games. And you can read and answer E-mail messages at your convenience.

Another Full-Featured Mustang Product.

OLX for Windows makes the most of the Windows environment with a Graphical User Interface and Windows Toolbars. Its impressive capabilities let you edit and spell-check your messages, handle several QWK packets

simultaneously with full MDI, and quickly store, search and retrieve messages with a powerful folder management system. It also features a list manager to keep your address book, subjects, packet information and taglines in order. And OLX for Windows enables you to handle Internet messages with long addresses and subjects. It even has sound support, so you can attach your favorite WAV files to specific events. Like all products from Mustang Software, OLX for Windows includes a comprehensive user manual and the performance features that are most requested by our customers. And, best of all, OLX is backed by Mustang Software, the most respected name in the BBS industry.

The communications experts have done it again with its new QWK-compatible off-line mail reader for Windows. Get your copy of OLX for Windows today.

The Skinny on MSN

Microsoft Corp.'s first foray into the online services market has been a hot topic of discussion among computer users in recent months, due in large part to a carefully orchestrated series of information leaks from the company itself. However, now that the Microsoft Network (MSN) and its parent software, Windows 95, are both well into the beta stage, Microsoft officials are ready to start tantalizing modem users with hints of things to come.

"On day one, we will be a worldwide service," said Naveen Jain, senior technical marketing manager for the Microsoft Network. He noted that the MSN will be available in 20 languages and through local dial-ups in 47 nations on launch, which is scheduled to take place in August.

The MSN will be available only to Windows 95 users in the beginning, leading many computer analysts to conclude the service will be little more than an advertisement for its platform of choice. However, the service is shaping up to be essentially another version of the popular online service formula: e-mail, live chats, access to vendors, and, of course, free software. More than 50 hardware and software vendors have already agreed to set up shop on the MSN, Jain said. Each company will decide what goods and/or services to include on its site. However, most companies are expected to offer general information sites and technical help at the very least.

In addition to these services, early MSN customers will be able to access Usenet newsgroups and send and receive mail via the Internet. The service is expected to introduce full Internet access before year's end. The MSN will also offer a news resource.

"We are going to be collecting stories from the existing news feeds rather than having our own reporters writing news stories," Jain said. "We will be adding value to the existing news by adapting them to the online world."

Microsoft's plan to adapt stories for redistribution has been misinterpreted to mean that the company will place its own spin on the news, Jain said. But he stressed that the company will not be rewriting history or otherwise changing the gist of the news stories.

Windows 95 users are likely to have a heavy influence over the service early on, if for no other reason than they will be the only people who can access the service for the first few months. Microsoft does plan to expand the service to include other popular platforms, however. A Windows NT version will be available approximately six to nine months after the service debuts, and an Apple client is scheduled to debut next year.

However, Microsoft does not plan to import the service to OS/2 at this time, Jain said.

MSN will naturally be accessible through local dial-up numbers, Jain said. However, the company plans to experiment with several other modes of online access within the next few years. Early subscribers (e.g., Windows 95 users) will be able to access the service at speeds of up to 14.4Kbps. Microsoft plans to add 28.8Kbps and ISDN access by year's end — possibly making it the first of the major online services to offer an ISDN-quality connection (AOL now offers AOLnet, ISDN service through a regular dialup, with a limited coverage area).

ISDN offers better speeds and transmission qualities than traditional telephone lines, both attractive features for those who spend a lot of quality time with their modems. Microsoft believes ISDN access will appeal to more than just business users.

"A lot of people who use online services get a second line (specifically for that service), and they pay \$30 to \$40 for that line," Jain said. "From what the telephone companies are saying, for about \$30 to \$40 per month, you can get an ISDN line."

ISDN lines have indeed become more affordable in recent years due to lower rates at the local level. The Regional Bell Operating Companies (RBOCs, better known as the "Baby Bells") have dropped their basic ISDN

rates substantially in recent years, bringing the high-speed access within the reach of the average residential user (in some places). Ameritech, an RBOC serving the Midwest U.S., charges less than \$35 per month, plus 5.2 cents per minute (for prime time access) for an ISDN line in Illinois. Bell Atlantic, which serves the Atlantic seaboard, charges around \$36 per month, plus five cents per minute, for an ISDN line in Maryland. (The rates generally fluctuate by state and/or area.)

Microsoft officials are also exploring cable-based access with partner Tele-Communications Inc. (TCI), the number one cable service provider in the U.S. The companies are jointly developing cable-based delivery of the MSN, Jain said, and early tests of the service could begin as early as next year. (CompuServe, America Online and Prodigy are all now testing cable-based delivery services as well.) There are several major advantages to cable-based delivery of online services, including near-flawless transmissions and incredible access speeds. Both aspects are due in large part to the digital fiber-optic lines used by major cable companies to deliver video. For the online service user, these lines can translate into faster download speeds and a generally satisfactory online experience.

For now, MSN is available only through plain old telephone lines to Windows 95 beta testers. The final version will definitely ship in August with Windows 95, Jain said, followed by the other platforms into the next year. Microsoft, of course, expects the service to become nothing less than a major hit.

PCBoard Professional BBS Software

We won't settle for second best, neither should you.

Leading the online industry for more than a decade

Here at Clark Development we have been making the industry's best Bulletin Board Software for more than a decade. Our flagship product, PCBoard, is the only commercial BBS software to ever receive the prestigious PC Magazine Editors' Choice Award for BBS Software. Last year we received the Hayes/Dvorak Award for

Outstanding Telecommunications Technology for our PCBoard Programming Language. More of the boards in the Boardwatch Top 100 list run PCBoard than any other BBS software, including the #1 BBS for the past three years in a row and last year more PCBoard BBSes placed in the top 100 than Major BBS and Wildcat combined.

Still the #1 best selling BBS software world-wide

Get more standard features for one low price with PCBoard!

Nobody else delivers this much value and functionality for one low price. Don't be fooled by vendors that include costly add-on's in their feature list but neglect to include them in the advertised price. With PCBoard, you get all this plus a whole lot more - all for one low price. You may not need all these features today, you may not even know what some of them are, but they are ready to use when you are.

Your key to the future of online communications

Bringing the future of BBS software to you!

Our programmers are hard at work on a new, 32-bit, native OS/2 version of PCBoard. This summer we will release an update to the DOS version with an even more powerful Fido Mailer & Tosser, Internet/UUCP Gateway and enhanced PCBoard Programming Language. And in September we will unveil the next generation of online communications software from Clark Development - a graphical, client/server package that brings together the best that BBSes and the Internet have to offer in a way that nobody else can.

The future is waiting for you in Park City, September 21 - 24, 1995!

Don't miss the online event of the year at the 1995 PCBoard / Online Communications Conference in Park City, Utah. Attendees will be among the first to experience the next generation of online communications software from Clark Development and learn from the experts about what it takes to successfully operate your own online service. Space is limited, register today!
