LETTER FROM THE EDITOR

By Elizabeth A. Olson

Having just hopped off the plane from Vegas, the staff of the *Game Informer* is still reeling from the overload of new products and technology that are in store for the video game industry. The **1993 Winter Consumer Electronics Show** was an exciting and exhausting experience, with trade booths and crowds of people as far as the eye could see. While this year's show lacked that one "must see" game, the future looks relatively bright. We'll tell you all about the latest games in the **CES Update**.

To illustrate just how far video games have come, *Game Informer* turns its spotlight on several new methods of character and graphic programming with our **Innovative Animation Feature**. We even got a chance to talk with Michael Quarles, the man behind the claymation craze at Interplay.

We've received numerous letters from readers around the country who are new to video gaming or just miss some old classics. So for that reason, we are happy to introduce a new feature called **Classics Attic**. We encourage you to write and tell us which timeless titles you'd like to see

coverage on. We'd also like to thank the hundreds of people who entered the **Chester Cheetah Contest**. We received everything from drawings to computer renderings to poems and raps. You'll find a few of our favorites and the lucky winners in this issue.

I'm sure you're as anxious to read about all the new games and accessories featured at CES as we were to see them, so what are you waiting for?!!

Corrections:

The correct date for the Readers Survey return should be March 15, 1993 not 1992. Sorry for this slip. Getting into the New Year has always been a tough one for us.

The 5200 picture in the History of Vids article in the Jan/Feb issue was actually the 5200 roller ball. Thanks for the letters concerning these. It's nice to know you're reading this magazine closely.

Dear Game Informer:

When one of your reviewers gave Shatterhand a perfect 10 (Jan/Feb '92), I knew it must be a good cart, so I went to the nearest Flipside and bought it. I can beat Balzine and the Pogoborgs, but I can only get to the Filtration Plant boss, Harptunebot. I can't beat him.

Steve Whitlock
Royal Oak, MI

It helps to have the YoYo-bot, the satellite that uses the Beta, Alpha, Beta symbols and shoots in all directions. The Filtration Plant boss drops mines whenever he floats up towards the surface. The key is to run into a corner whenever he rises to drop mines. When he descends, run over and punch him as many times as you can before he starts to rise again. Then head back to the corner and repeat the process until you defeat him. Be careful to avoid the falling mines.

-Ed.

I simply love your magazine, but I was curious just how long my subscription lasts. I haven't received anything since Spring of 1992 and I was wondering if I still had a subscription. If not, could I get the back issues and a new subscription?

Melinda Hough
Yakima, WA

It sounds as if you have received several of our complementary issues. The only way to guarantee that you will receive every issue is to purchase a subscription. These subscriptions last for one year or the equivalent of six issues. You can find information on how to subscribe on page 30 or the subscription insert card. If you are a paying subscriber and have not received one or more of your magazines, please write or call our Customer Service Department at (612) 946-8883.

*Several readers have written to inquire about back issues of **Game Informer Magazine**. At this time, most issues are available. To order your copy, please send a check or money order for \$3.95, plus 75¢ shipping and han-*

-Ed.

I love your magazine because the reviews are tested by different people, not just one person. And the tips are excellent because most of them work.

Adrian Cabural
Richmond, CA

We like to give several viewpoints on a game because we know there are several types of game players. Hopefully, readers can find a reviewer with similar tastes that they can relate to. Thanks for the compliment, Adrian.

-Ed.

I just read the Summer '92 issue and was surprised and pleased to see the Game Genie letters for *Super Mario Bros.* on page 60. What a cute idea for a game that's been played hundreds of times with and without the Game Genie. I've already tried some of them. I sure hope you come up with other strange worlds for other games. I've tried for months to come up with letters for *The Three Stooges* and *Thunder & Lightning*, but without success. Guess I just don't understand the principle. Thanks for a great magazine.

Joyce Todd
Tacoma, WA

Jason Gerber's codes for Super Mario Brothers were cool, as shown in the summer issue. But we have some we have found that are neat. Try them! ZEANIE, GOATEE, KAGIVE, LAXPEG, OATLIN, OATTAO, SUITOP, TOZVOA, TIEETO, VIOLET, XLUTSO, and, for real fun, try KENUET and STAGEP.

Concept:	8	Definitely a new twist in strategy plots. It's not every day Vikings get sucked up into space ships.
Graphics & Animation:	8	The graphics fit this strategy game. Sharp, detailed characters and attention to the backgrounds keep things fresh.
Sound:	8	It keeps the time flowing.
Playability:	8	Good action mix; not too much or too little. Changing characters is easy using the top buttons. <i>Vikings</i> is a great introduction to puzzle/strategy games.
Entertainment Value:	8	This is a good game that's easy to get hooked on. Puzzle-solvers will be lost for hours.

Overall Rating: 8

Norse mythology tells of a spectacular palace in the land of Asgard named "Val Halla" or Hall of the Slain Warrior. There Odin and his Valkyries would select which fallen heroes were worthy of a new life and, once brought to Middle Earth, these warriors could practice battle all day and feast on an unlimited banquet. Each night their wounds would heal so they may battle again at sunrise. It is said this is how Scandinavia raised powerful warriors. So strong was the Scandinavian's belief in Odin that whenever a distinguished warrior died, he was placed aboard his blazing ship and set out to sea for Val Halla.

Interplay has resurrected heroic Scandinavia and plopped it into the future in its newest game for the Super Nintendo. *The Lost Vikings* is a

game of strategy and teamwork as players direct three Nordic heroes through 37 challenging levels.

Meet our three displaced heroes. Olaf the Stout, Baleog the Fierce and Erik the Swift had just returned home from the Fall harvest feast. It had been a day full of celebration and competitions of bravery and skill. The brothers had again teamed up to emerge victorious. In all the festivity, no one noticed the strange flying object hovering over the village.

Tomator, the infamous intergalactic zoo keeper, had come to Earth in search of specimens for his collection. He observed the primitive rituals earlier in the day and selected the victors as his target. While unsuspecting villagers slept, the spaceship lowered over their homes and teleported them aboard. The Vikings were startled awake as they materialized inside Tomator's spacecraft. They must work together, using

Olaf's defense tactics, Baleog's weaponry and Erik's speed, in the challenge of their lives.

Escaping Tomator's clutches is just the beginning. Each door throws them into another time period or world. One player controls all three Vikings, or two players each guide a Viking and share the third, to return the brothers safely to their village.

The Lost Vikings uses humorous characters, colorful backgrounds and a hot soundtrack to make this game of skill and teamwork fun for players of all ages.

- Concept:** 8.5 Teamwork games are on the rise and *Vikings* is one of the best. Each Viking has an ability that, if used cooperatively, will allow them to survive.
- Graphics & Animation:** 9 Full of vibrant colors and scrolling backgrounds; the most outstanding feature is the animation.
- Sound:** 9 *Vikings* has very happening tunes and wonderful sound effects.
- Playability:** 6.5 Controlling this game takes practice but it operates smoothly. Learn to switch characters at the right time or your demise will be early and often.
- Entertainment Value:** 7 *The Lost Vikings* is technically excellent and a good idea for a game, but it might not be for everyone. It requires quick reflexes, but it's mostly a strategy game. You might want to rent it first.

- Concept:** 10 *Vikings* is reminiscent of older games, with a super combination of role play characters, action, and strategies.
- Graphics & Animation:** 9 Each Viking has a talent; one is fast, one is a fighter, and the third carries a shield that can stop anything. It features great color and serious animation.
- Sound:** 8 What a great choice of background music! It's jazzy, upbeat, and a great way of selling the ridiculous but great idea of Vikings in a space ship.
- Playability:** 9 Like any future classic, it plays well. The first levels are easy and get tougher. It makes you use each player equally, so you can't just play your favorite.
- Entertainment Value:** 10 *Vikings* is pure enjoyment. These little guys will make you laugh and red-eyed from hours of play.

Kid Klown in Night Mayor World: An Adventure For Young Gamers

- Nintendo 8-bit
- 1 Player
- Multi-directional scrolling Action/Adventure
- Non-violent theme targeted toward younger gamers
- 2 difficulty levels
- 5 stages, plus bonus stages
- Created by Kemco, March, 1993

Life was a carnival for the Klown family until that stormy night in Kansas. They were cozy in their circus trailer, traveling to the next town, when suddenly there was a flash of lightening. When Kid's eyes adjusted he saw the evil magician, Night Mayor.

"Kid, I've found a vault of priceless treasure and I need your assistance in opening it," he hissed. Knowing not to trust the magician, Kid refused, infuriating Night Mayor.

"Very well, I have ways of persuading you," snapped the magician.

Lightening shot from his fingertips, followed by the roar of thunder. When Kid opened his eyes, his family was gone.

Look for strawberries along the way.

Concept:	6.5	This game lacks anything really new, but seems to mix and match old ideas into a new and somewhat original cart.
Graphics & Animation:	6	The graphics are not bad, but with the slow down in growth of the NES library, I believe all NES games hitting the market today should be a cut above the rest.
Sound:	5	The sound effects and music are just as good as any NES cart. Unfortunately, that's not saying much.
Playability:	8.5	I like the "mix and match" <i>Mario</i> style that this vid has.
Entertainment Value:	5	For myself, this game is average. However, <i>Kid Klown</i> is perfect for young or beginning gamers.

Overall Rating: 6.25

Night Mayor's voice boomed from the night air, "If you ever want to see your family again, you'd better come find me."

Poor Kid Klown must search Night Mayor's mixed-up world where anything can happen. He needs your help! Luckily, Kid is armed with an unlimited supply of balloons and, with your assistance, he's a pretty good shot. If he releases a balloon while jumping, he can aim it in eight directions. Or, stand still and shoot one straight up to hit enemies as they fly by. By holding an inflated balloon, Kid will float to safety from any height. Speaking of heights, set a balloon on the ground and jump on it for an extra boost.

You'll come across treasure chests that can be opened with a few balloon hits. Collect as many strawberries as possible to qualify for the bonus round located after each

level boss. These shooting galleries give you the chance to sharpen your aim, gain hearts and one-ups.

There are five stages in *Night Mayor's World*. The Deadly Meadow is full of somersaulting circus poodles and poisonous spiders. Next, it's "Bad Guys in Toyland" as you're surrounded by tin soldiers and wind-up robots. It's the Kid versus Mother Nature and Mother Goose in Stage Three, and things get slippery when the Kid reaches the Arctic Wasteland inhabited by sinister snowmen. Finally, he'll have to survive the syrupy pitfalls of Candy World if he hopes to save his family.

Kid Klown in Night Mayor World is a great adventure game, designed around non-violent action that's recommended for the younger players in your household.

- Concept:** 9 *Kid Klown* is an interesting variation of the *Mario*-style game, with enough original ideas to make the game truly unique.
- Graphics & Animation:** 6 Kid moves very well and the bosses are great. The amount of screen flicker, however, is some of the worst I've seen in newer NES carts.
- Sound:** 7 Not bad...fitting carnival tunes.
- Playability:** 8 *Kid Klown* gives the player a wonderful range of control options for an NES cart with a shooting gallery, super jumps, and reverse controls. The challenge is moderate to easy.
- Entertainment Value:** 7.5 This is a fun game for the entire family. The original ideas and range of options will keep you playing and prevent boredom. The low-intensity difficulty level is just right for intermediate or younger players.

- Graphics & Animation:** 6 It is hard to tell if Kid was a clown or a rag doll. However, he does look good when he jumps.
- Sound:** 5 Like I said before, it's Brand X through and through.
- Playability:** 8 Even though this is geared as a kid's game, it has excellent levels to tackle. One complaint: the bosses are too easy, but the player control is good.
- Entertainment Value:** 5 *Kid Klown* is great for kids just starting a lifetime of gaming, but there isn't enough to keep a player with over a year's experience occupied long.

Overall Rating: 5.5

Classics Attic

Welcome to our newest feature, *Classics Attic*, where we have the opportunity to review some of the best games from the past and see what makes them so timeless. For our first installment the Game Informer reviewers voted unanimously for *Metroid*, originally released in 1987. We'd love to hear which titles you'd like to see covered in these pages.

The Magic Behind Metroid

The turn of the 21st century brought peace and prosperity. A congress called the Galactic Federation was formed to promote the exchange of cultures. Interstellar ships shuttling between the planets hastened

the appearance of space pirates. These cosmic crooks became increasingly difficult to apprehend, even after the Federation Bureau inducted great warriors as bounty hunters. In the year 20X5 an unknown life form is discovered on Planet SR388. It's suspected that the entire civilization of SR388 was destroyed and this new life form nicknamed "Metroid" could be the cause. For that reason it's stored in suspended animation until further tests can be run. If Metroid falls into the wrong hands and is multiplied, it could be used as a weapon to wipe out all galactic civilization.

Federation researchers were transporting Metroid back to Earth when they were hijacked by space pirates. Metroid is now hidden deep within the pirate's headquarters on the fortress planet Zebes, and plans to multiply this deadly life form are underway. A space hunter must penetrate the fortress and destroy the Mother Brain if there's any hope

of stopping this intergalactic carnage. The space hunter chosen is a cyborg, surgically strengthened by robotics, known as Samus Aran.

Samus begins his search through the three zones of Zebes armed only with a short beam weapon. You must clear the large maze, the Brinstar and the Norfair zones, before entering Tourian, central base of the Mother Brain. To help in your battle there are several types of power-ups: a long beam, an ice beam to freeze enemies, a wave beam, the spinning screw attack, high jump boots, the shield-like Varia, the Maru Mari tucking ability, and bombs.

Power-ups are important, but it's equally important to collect the six

"Wow! One of Nintendo's first cartridges is one of the greatest action/adventures I've ever played. It takes patience and a good memory to find your way through this massive game. Turbo's Head-banging Hero Goes Game Boy in

- **Game Boy**
- **1 player Action/Adventure**
- **5 levels of progressive difficulty**
- **Bonus stages and ample power-ups**
- **By Hudson Soft, available now**

Boogaloo! That cute, courageous little cavewoman that we've come to know from NEC's TurboGrafx and Duo formats has made the cross-over to Nintendo's hand-held unit. To put this in perspective, that's like Mario putting in an appearance on the Game Gear. The good news is that Game Boy owners will get their first glimpse at this prehistoric hero.

Join Bonk as he travels through Dinosaur Land in search of the lovely Moon Princess. Bonk's old rival, King

Drool, has returned in this new adventure and he's up to his old tricks. The devious Drool has kidnapped the Princess and is threatening to take over Dinosaur Land in his quest for power.

Bonk must face all sorts of Drool's brigade of bad guys but not to worry. This is one cave-kid that really knows how to use his head in a sticky situation. He uses his head of stone to bash the baddies and gather bonuses in order to restore peace to the land.

Bonk has several ways to use his head of stone. His primary defense is butting into enemies head-on. For extra oomph, use the mid-air spin which increases the length and power of his attack. Land head-first on opposition to bounce them off the screen, or spring from flowers to uncover power-ups. Bonk really sinks

his teeth into this adventure when faced with a challenge. He uses his over-sized choppers to climb cliffs and trees blocking his path. Water won't slow him down either, as he climbs waterfalls and swims to safety.

Pick up the plentiful power-ups to help in your journey. Fruit will slightly increase Bonk's life meter, and small hearts will lengthen his life. Big hearts increase his meter by three hearts, the crystal heart will max him out, and Bonk icons are worth an extra life. This kid really has an appetite, so it's a good thing there is meat along the way. Small meat icons give him a granite noggin and create a Grand Bonk that will rock your world, doing serious damage to any on-screen opponents. Large meat icons transform him into the ultimate Bonk, complete with a wicked-looking mohawk, whose bark is much worse than his bite.

The Latest in Video Game Hardware & Software

Introducing 3DO

What is 3DO? It could be the the next company to revolutionize home entertainment and interactive media. 3DO is the brainchild of Trip Hawkins, formerly of Apple and Electronic Arts. Previously named SMSG, 3DO is a collection of companies that include some heavy hitters in computers, multi-media, Hollywood, cable and phone networks, and software development. This impressive list of partners and backers reads like a Who's Who, including Electronic Arts, Time Warner, Matsushita Electronics, AT&T, and Kleiner Perkins.

What does 3DO do? It's actually a platform developed to create a new standard for consumer electronics, similar to what VHS did for video tape. The initial hardware features a 32-bit RISC processor, a custom graphics/animation processor, a custom sound processor, and a multi-task operating system. It's compatible with numerous audio/video peripherals and offers full rotation, scaling, texture-mapping and video-editing. Initially, the focus is interactive media but its networking capabilities are exciting. Panasonic is building the first US hardware, the 3DO Interactive Multiplayer, due out this Fall for around \$700.

The Meaning of L.I.F.E.

Pioneer unveiled their new interactive laser disc system, the **LaserActive™**, at a press conference entitled The Meaning of L.I.F.E. This new format combines the advantages of CD-ROM and CD-I with the graphics and sound of a laser disc player,

blending the analog and digital memories into an interactive experience. The main unit plays any size conventional CD, CDVs and LDs.

But there's more. Pioneer has teamed up with Sega and NEC to

create optional control packs for the **LaserActive**. The Mega-LD™ plays 8- and 12-inch **LaserActive** Mega-LD discs, Sega CDs, Sega Genesis ROM cartridges and standard CD-Gs. The LD-ROM²™, developed in cooperation with NEC, plays 8- and 12-inch **LaserActive** LD-ROM² discs, TurboGrafx CDs and ROM cards, and standard CD-Gs. A third **LaserKaraoke™** pack is compatible with **LaserKaraoke** discs and standard CDs.

Virtual Reality Comes Home for the Holidays

Sega has announced plans to ship their new **Virtua VR™**, a full-color virtual reality peripheral designed for use with the Sega

Genesis system, in time for Christmas. **Virtua VR** gives players the feel of being in a realistic 360 degree playfield by using 3-D, stereo-optic vision and depth perception, similar to the technology used in Sega's successful coin-op **Virtua Racing**. The **Virtua VR** will ship in the Fall with one virtual reality software title. Sega hopes to release at least four VR titles in 1993, featuring shooting, flying, driving and fantasy action.

Get Into the Game

Another new product from Sega is **The Activator™**, a full-body controller made up of eight interlocking modules. Players stand inside the circle and infra-red "smart beams" create a bi-level ring with 16 motion-sensitive panels. The action on screen is controlled by the player breaking through these beams with their own body movements. The **Activator** is compatible with both existing Genesis games and new software in development.

The Wonderful World of Claymation

Recently, *Game Informer* had the opportunity to talk with Michael Quarles, product manager for the clay animation department of *Interplay*. We asked him just what goes into creating a game such as their upcoming *ClayMates*, using this unique style of animation.

ing, and special image processing equipment that will allow all this to work on the Nintendo platform.

Where do you see the video game industry heading?

I worry that a lot of companies get a license and then throw the game together. If a game is bad with no license, fewer people buy it. But if it has a good license, a lot of people get burned. I also worry that CD ROM isn't being taken advantage of. Most of what exists now could be done on a cart if you removed some of the music. The gameplay doesn't compete with cartridge games already out there. On a more optimistic note, I hope to see more designers come up with innovative ideas to create entire worlds you can wander around in. What we need is technology supported by good games.

Can you define the term 'clay animation' for our readers?

Clay animation is the process of still frame animation in which you build 3-D clay models, shoot a frame, move the model, take another shot and so on. We can actually take these models and make them run, jump, bulge out of shape and create animation.

When did you first gain an interest in the art of clay animation?

Several of us at Interplay go to the animation festivals, and a large part of what we see is created with clay. I was fascinated by the idea of clay animation because you can do so much with it.

What do you think this new form of video graphics offers to game players?

Internally, we call it 'physics,' which refers to the physical aspects of a character. A lot of people try to model their physics after the real world. I think clay animation breaks away from that and brings a new type of physics to video games. You can do all the things clay can do.

When creating a clay animation game, does it begin with a storyboard like a cartoon?

We start by writing a general description for every level and creature, then draw sketches of those, which often inspires new ideas. Once they are physically designed, we do some preliminary programming to make sure it works.

Do you first program the character and manipulate it from there or is it frame-by-frame, or backgrounds first?

We create the main character first. Once we get the feel for that character, we pick the next character and so on. Then we do each object, one at a time, until they create a level.

Does this type of programming require any special equipment or technology?

You need someone who can build an armature and someone skilled in 3-D sculpture; theatrical people who know lighting and photography; special equipment for digitiz-

Creating A World of Our Own...

From the time we started watching Saturday morning cartoons as a child to the time we take our grandkids to see the latest Disney movie, animation plays a big part in our lives. Animation is instrumental in our education, teaching everything from right and wrong to foreign languages. Animation plays its part in history, too. Animation was the forerunner of motion films and one of the earliest types of programs broadcast on television. Famous cartoon characters helped bolster support for the troops during World War II and encouraged us to buy bonds. Today those cartoon characters are joined by a host of others decorating everything from watches to clothes to furnishings.

The advent of computer graphics opened up a whole new world. Breathtaking special effects could now be created for less risk and cost. The film, "Tron," was an early example of what this meant to the entertainment industry; just a foreshadowing of the marriage between computer animation and video games.

The introduction of 16-bit technology, CD ROM, and other high-end systems has opened the door to yet more innovations in graphics and animation. Scrolling and rotation, hand-drawn frames, rotoscope animation, real-time 3-D graphics, full motion video: the possibilities are endless. Designers are continually striving to develop a better technique and a more impressive look to bring games one step closer to interactive reality. The following pages include a few examples...

View Point thrusts the Neo•Geo system and shooters into the nineties. At a time when "Virtual Reality" is the hot topic, SNK created a game that feels like you've stumbled onto the playing field.

One of the unusual aspects of *View Point* is that there is no plot... none; no alien race invading planet Earth with you its last hope, no princesses to rescue. But what this game lacks in story line is more than made up for by eye-popping graphics. Rather than shooting it out with spacecrafts, you find yourself submerged in a distinctly computer-generated world. Instead of battling against an alien race, you are surrounded by a host of colorful, creative, three-dimensional characters.

The *View Point* world consists of moving walls, spinning platforms, rolling gears and

Bubsy the Bobcat Makes His Debut in Claws Encounters of the Furred Kind

- Super Nintendo
- Action/Adventure
- 1 or 2 player
- 16 levels of wool-gathering action
- 16 megs of huge screens
- Digitized voice and interactive animation
- Password feature
- Created by Accolade, for SNES and Sega Genesis, March 1993

A new star is born, at least that's what Accolade's banking on. He's got big blue eyes, an infectious smile; he's athletic, energetic, witty, and generally cute and lovable. Oh, and

he says pretty much whatever comes to mind.

Bubsy isn't your typical beefcake. Actually, he isn't beefcake at all. He's a bobcat from Paw-tucket, located in the foothills of the Catskill Mountains. Here his days were spent accumulating his enormous yarn ball collection.

It was from this hobby that the first seeds of stardom sprouted. You see, Bubsy not only stars in *Claws Encounters*, he wrote it. It involves an alien race from the planet Rayon known as the Woolies. It seems the Woolies have an insatiable lust for yarn and that's where our story begins.

Rayon's twin queens, Poly and Esther, covet yarn more than any Woolie. Their yearning for yarn leads

them to set Professor Nylon on a search through the cosmos for a planet with wool to plunder. His search led them to Bubsy's private collection. The Woolies departed for Earth in their silk saucers. Little did they suspect they were about to go up against a most fur-ocious feline.

Claws Encounters of the Furred Kind features five worlds made up of three chapters, and a finale, for a total of sixteen fun-filled levels. But be prepared for some serious satire. Each chapter opens with a tongue-in-cheek title such as "A Bridge Too Fur", "Dances With Woolies" or "Claws For Alarm."

Bubsy runs, jumps and bounces through his village in the Catskills, a crazy carnival, a western world, a woodland river world, and the depths of the forest. The fur begins to fly as he bumps off Woolies by bouncing on their heads. Bubsy also tries to reclaim as many yarn balls as possible, but watch out for hazards. There are more than forty ways for our hero to die, ranging from pratfalls to trolley cars to thorn-shooting cactus (Hey, no jokes about more than one way to skin a cat, please!).

Bubsy is one congenial cat, thanks to his large repertoire of expressions. Better yet, he'll even stop and tell you what's on his mind. *Claws Encounters* is as much fun to watch as it is to play, and the designers have even included a toe-tapping soundtrack. If you're looking for a game that's as addictive as catnip, check out *Bubsy*. You'll be hooked from the first "fluff-dry".

Flashback tells the story of Conrad Hart, an agent-in-training with the Galaxias Bureau of Investigations. Conrad has been developing a compact Molecular Density Analyzer for Forensic Investigations class. This device registers the molecular density of objects, separating it from its surroundings.

Concept:	9.25	Take every <i>Arnold</i> movie, twist them together and you've got the story line to <i>Flashback</i> . It's great.
Graphics & Animation:	9.5	The animation is unbelievable. The character moves so smoothly. Throw in great backgrounds, animated sequences...you see where I'm leading.
Sound:	8	The sound effects are unreal. Although there's little to no background music, I believe it adds effect.
Playability:	9.5	The first game by Delphine was great, but had limited control. For that reason it seemed more one-dimensional. They've gone back to the drawing board 'cuz <i>Flashback</i> has everything. You can move freely instead of being led down a path.
Entertainment Value:	9	I was hooked from the second I put it in. The realism and story line grabbed me and I couldn't put it down. It's a long, well thought-out game that will keep you interested. If you liked <i>Out of this World</i> or thought it looked cool, play <i>Flashback</i> !

He and his girlfriend discover that certain individuals are registering an unusual density, so high it defies analysis. Key political figures are actually extra-terrestrials that infiltrated society for a full-scale take-over.

Unfortunately, his investigations were detected. Now Conrad has been kidnapped, his memory erased, and taken to the Titan Colonies. He managed to escape, but is shot down over Titan's artificial jungle. Armed only with a stolen gun and a holocube, a pre-recorded message on the holocube tells him to seek out his friend, Ian. So his journey begins.

Conrad must work his way through traps and enemies in this forbidding environment. Face hostile opposition such as mutants, replicants, anti-matter fields and watchdog robots as you move

through each level. Conrad must help a wounded man and obtain an I.D. card to enter New Washington. Ian helps Conrad restore his memory, but now he must take on assignments from

Conrad's first encounter with Ian.

Survive the Death game show and win a trip to Earth.

- Concept:** 8 From the designers who gave us *Out of this World* comes *Flashback*. It incorporates elements of Science Fiction into an action/adventure game.
- Graphics & Animation:** 9.5 The animation is unbelievable. The intricate, subtle movements of Conrad are a credit to the game's designers and programmers. Awesome!
- Sound:** 8 There is little music in *Flashback*, but the sound effects, such as guns and warps, are outstanding.
- Playability:** 9 With all the different moves, this cart takes time to master, even for superior gamers. The variety of extras you can acquire make game play even better.
- Entertainment Value:** 9 Amazingly, *Flashback* is one of the best action/adventures I've seen yet. I'm a sucker for Sci-Fi, and *Flashback* provides a great story line with plenty of cool gadgets to use along the way.

the Department of the Interior to earn money for false papers. Then enter the "Death Tower TV Show," in order to win a free trip to Earth.

Once on Earth, the authorities are alerted and send robot cops to eliminate you. You must make it to the Paradise Club, an alien hangout, to uncover their plan.

You trigger an alarm and in the chase you fall into a ventilation pit. You are transported to the planet of the Morphs, where it is up to you to destroy the auxiliary "Head Brain" and neutralize their invasion.

Flashback uses new animation techniques to bring CD quality to the 16-bit Genesis. It features rotoscope animation, the process of filming live actors and hand-illustrating these motions on cells. Six artists then

hand-animated these movements into computer graphics. *Flashback* has more than 2,000 frames playing at 24 images per second. The result is breathtaking.

- Concept:** 10 What an idea! Many novel writers never succeed at a story this great. Sweet! The ultimate in Action/RPG.
- Graphics & Animation:** 10 The only game that comes close is by the same design house. The foreground and background graphics are well done. There's so many sprites to watch, but it's almost impossible to take it all in.
- Sound:** 8 The gun fire sounded very realistic; sound effects in general surpass many I've heard. I do feel *Flashback* needs some classic 60's tunes.
- Playability:** 10 Most amateurs will find this game hard at first; timing is extremely crucial. It has jumps that will frustrate the best players, enemies that seem to never die, and traps everywhere.
- Entertainment Value:** 10 I can sum it up in two words, "Buy it!"

Create Your Own Tiny Toon Adventures™ With Konami's Cartoon Workshop

By Elizabeth Olson

So, you say you've always dreamed of becoming a big-time director or producer? Well, here's your chance. Konami gives Nintendo owners the opportunity to create cartoons with their newest title, *Tiny Toon Adventures™*

Cartoon Workshop. That's right, Konami has enlisted the help of Buster and Babs Bunny, Furrball, Plucky Duck and several of your favorite Tiny Toons characters in this experiment in cartoon development.

Cartoon Workshop is like no other cartridge available for Nintendo. Players can choose from six different characters to star in their production. Up to two characters or a character and a prop can be on screen at the same time. There are 11 solid color backgrounds to pick from, or select one of eight scenic backgrounds. These range from a desert, a forest, a frozen lake, an ocean (complete with ship wreck), a city, a village, a spooky castle, and the steps of the Tiny Toons Looniversity.

Once you've selected your set and your characters, you'll need to make them do something. Each personality has fifteen, twenty-action sequences to choose from, including water fights, ice fishing, scuba diving and more. Buster can harass Babs or

Calamity Coyote can come up with another scheme to chase Little Beeper. Put them together in any order; the combinations are almost limitless.

What would any cartoon be without dialog and sound effects? There are five theme songs that play continuously until you cut them, or try six short tunes to highlight action. Each activity comes with its own sound effect or add one of three provided. Turn your cartoon into a "talkie" with 30 phrases. Pick common phrases to match each personality or select a special occasion greeting to customize your cartoon for family and friends.

Cartoon Workshop is set up like any PC windows program. The bar at the top features icons for character,

settings, dialog, sound effects and filming. Simply move the directional control to each icon, highlight it with the A Button and scroll down to make your selection. A frame counter will let you control which actions take place in which frames. The scissors icon under each category allows you to edit out any action and redo it.

Each time you select a new location it erases any previous film. There is no way to store your finished production on the cart, but you can hook up your VCR and tape them to send to friends or watch them over and over. You can create a cartoon up to eight minutes in length, complete with the backwards countdown to add authenticity.

So, you want to be in pictures? With *Cartoon Workshop* it's as easy as "Lights, camera, action!"

Not Recommended For Cowards.

From deep within Mordroc's Castle, a foul stench rises up to mix with the cold, damp midnight air. In the deadly caves far below the surface, the evil wizard's pet fire-breathing dragon, Singe, guards the captive Princess Daphne. You, Dirk the Daring, walk steadily toward the castle gate. You feel no fear—but then, fear is for cowards. No other would dare to enter this perilous castle where Mordroc has imprisoned the helpless princess. But for you, there is no other possible course to take. Now is the time for heroes. Now is the time to enter the

IT'S AN
EVOLUTION
REVOLUTION!

Joe & Mac's country cousin comes to the Super Nintendo!

If you were a monkey, just hangin' out in the jungle with your chimp-chick, and a magic ruby fell out of the sky and zapped you both, turning you into half-humans, and a demon-kid swooped down and made off with your girl — what would you do? You'd high-tail it after them and stop at nothing to save her, that's what — 'cause you're Congo, the monkey-turned-superkid, and only you can uphold the law of the jungle! But it's more than a jungle out there — your search for little Congette will take you from ghost towns to pirate ships to ninja castles to the belly of a Tyrannosaurus. This is no time for a banana-break — you'd better get down to monkey business!

What's in Store for the First Half of 1993?

A Consumer Electronics Show Update

Twice a year the electronics industry gathers to show off their new products and the latest technology. The Winter CES show, held each January in Las Vegas, is the largest electronics industry show in the world. Video game developers and manufacturers do their best to show buyers, distributors and the press what they have up their sleeves for the first half of 1993.

This year the talk of the show centered on new multi-media and laser CD platforms, such as 3DO and Pioneer's new LaserActive (see Tech Talk Pg. 14). Other popular exhibits were the latest licensees for the Sega CD, Sega's new Virtua VR and Nintendo's Star Fox exhibit, complete with a laser light show. Below is a brief overview of what's in store from your favorite game companies early in 1993. Stay tuned to **Game Informer Magazine** for more details.

A Historical Look At Video Games: The 8-Bit Era

By Elizabeth Olson & Andy McNamara

(Part Two of Three)

In the last twenty years, we've seen game systems evolve from simple 8-bit processor-based units to 16 and 32-bit units, incorporating near infinite colors, stereo sound and 3-D graphics. As we stand on the threshold of yet a new generation of interactive, multi-media technology, it's important to take a look back at where we've been.

Nintendo Revives a Dying Industry

1985 has been noted as the year the video game industry crashed. Retailers and distributors were dumping software for a fraction of its cost and game manufacturers were pulling out of the industry or restructuring. In a brazen move, Nintendo introduced a new video game cartridge system to the U.S. Based on the overseas success of their Famicom System, which had already sold an estimated 6.5 million units in Japan alone, they tested the unit in New York just in time for Christmas. Touted as the new generation of video games, the Nintendo Entertainment System boasted improved technology and the likable Super Mario characters already familiar from *Donkey Kong*.

Following their successful test, Nintendo introduced the NES across the country in 1986. Nintendo brought with it a third-party licensee structure to help control the quality and the quantity of software developed for their system. With strong Japanese support and an ever-expanding list of games, Nintendo quickly captured more than seventy percent of the "new generation" market. The NES sold more than one million systems in that first year, but they were not the only participants in the game. Atari Corporation released their 7800 System and INTV introduced a product called the

Nintendo Entertainment System

Intellelevision³, or the INTV³, which was essentially the same design as the original Intellelevision from Mattel. Late in the year, Sega of America entered the U.S. home video game race with their 8-bit unit, the Sega Master System.

1987 was a frenetic year of growth for the industry. Sega signed a deal with Tonka to market and distribute the Master System in the United States and Canada. Atari Corporation reopened their video game division and the now independent Atari Games formed Tengen as a division to bring their coin-op successes like 1985's *Paperboy* to the home game systems. Nintendo predicted that industry sales would reach \$825 million by the end of the year. In fact, the video game industry sold more than four million game systems, reaching sales of over \$1 billion. Part of the growing popularity was due in part to games like *Metroid* and the Role-play/Adventure title, *The Legend of Zelda*, which was the first "new generation" game to sell more than one million copies.

Meanwhile, NEC Corporation, a leading international manufacturer of computers and communications products, introduced the first 16-bit game system in Japan. The PC Engine featured a faster processor, more available colors, a larger memory capacity and six channels of sound. The software was loaded onto a thin, plastic HuCard about the size of a credit card, eliminating the bulky cartridges. Sega was close on their heels with the Japanese release of another 16-bit system, the Sega Mega Drive.

By the end of 1988, the video game industry had more than doubled sales over the previous year. Following the popularity of *Zelda*,

Sega Master System

TurboGrafx-16 System

Sega enjoyed their first hit Role-play title, *Phantasy Star I*. In addition to following their popular *Light Gun* with the Power Pad, Nintendo introduced the *Mario* and *Zelda* sequels, *Super Mario Brothers 2* and *Zelda II: the Adventure of Link*. *Punch-Out* and *Legend of Zelda* both exceeded two million units sold. Foreshadowing the success strategy of sequels, Capcom introduced their little, titanium hero, *Mega Man* in the first of his adventures. He would go on to become the first original video game character with eight titles to his credit.

To Be Continued...

The staff of Game Informer Magazine would like to thank the representatives of Atari Games, Tengen, Rogers & Associates, Manning Selvage & Lee, Berkhemer Kline Golin/Harris, Activision, Turbo Technologies, Aldrich & Associates, Williams/Bally/Midway, Roger Sharpe and other individuals for providing background information for this article.

Garry Kitchen

David Crane

Dan Kitchen

In this issue we look at the innovations in graphics and animation. To grasp how far we've come, **Game Informer** talked with Garry Kitchen, President and CEO of Absolute, Daniel Kitchen, Vice President of Creative Development, and David Crane, Game Developer Extraordinaire. These three have been responsible for numerous award-winning games (i.e.: *Pitfall*, *Amazing Tennis* & *Super BattleTank*) in their years at Atari, Activision and Absolute.

How do today's games differ graphically from those of the past?

GK: "When David did *Pitfall*, its 4000 byte program was considered huge. *Amazing Tennis* is one megabyte, 1,000,000 bytes, so obviously there is more room to store animation. The way we create animation is different. In the late 70's and early 80's, animation was very simple. Today there are various ways to create animation, such as video-taping live players as a source, so it's a much more sophisticated process. All of the pixels and colors used in a single image of the tennis player are more than half the size of the video games back then, and there are hundreds of images of that player in that game."

DK: "There are over 1,000 frames of animation in *Toys*."

DC: "Color resolution has improved; there are more colors available now. If you go back twenty years, all objects were one color. Graphics were done by coloring in boxes on graph paper and holding it at arm's length to see what it would look like on screen. Today there are many utilities and products on the PC that allow us to develop graphics on screen as we see them."

What was the most challenging thing about developing a game graphically in the early years?

DC: "In the old days, it was making something look like what it's supposed to be out of a little tiny object made out of few pixels. There was a lot of experimentation; we would try a little shading here, a little of this or that, just to make it look like what it's suppose to look like. Now we have a staff of artists trained in how to draw on a computer, and they're masters at dealing with shading, highlighting, animating objects, smoothing edges; all kinds of techniques that didn't exist 15 or 20 years ago."

GK: "Alan Miller did *Tennis* for Activision and put a shadow on the ball; that was amazing. Now every game we do, lighting is an issue. You're much more concerned about how real life affects the graphics than when you were killing yourself just to get it to look like the guy had a racket in his hand."

Have these advancements sped up or slowed down the creation time of a game?

DC: "The best way to do that is to think of it in terms of man-hours. When I did a game by myself, it could have been a four or six month project. Now you've got a dozen or more people on every project, and 2,000 hours for every one of them. Some games can take seven months, while others could take two years, so it's a much longer process."

As for the longevity of a game, does technology have much to do with it?

DK: "The shelf life of a game is pretty independent of the technology; it's the game type itself. 'Catalog' products continue to sell while those based on flash-in-the-pan themes are gone when its gone."

GK: "There are certain genres of product that are long sellers, while others have hit potential but may have a shorter life span. It's a fickle audience with a short attention span, so our job is to keep coming up with neat, new things."

Do you agree with the opinion that, with these advancements, there's a lot of show and no game?

DC: "That has always been a concern. Dan pointed out that we like the fact that the hardware is capable of doing pretty pictures because we can simulate reality, but you could have a good game without graphics. What you can't have is a good game with only graphics, and a lot of people don't realize that. There are a lot of companies out there that will put out something very pretty, but it isn't fun. The game player is the ultimate judge and it doesn't take them long to realize that this doesn't work."

Where do you feel this industry is heading next?

DC: "Graphically, we're moving towards a finite conclusion, which is television, video or big screen animation quality. The real challenge is interaction. There's a long way for people to go creatively to use video quality graphics in a way that is fun and entertaining, and that's really our challenge going forward."

GK: "It addresses the previous issue. The fact is you still have to have a good game."

DC: "Right, entertaining is the key. I mean, a CD ROM drive will eventually play movies. It's not interactive but it's entertaining. You have to have some element of solid entertainment in there. Putting out pretty pictures and adding some very basic interaction isn't going to cut it."

Evil has again descended on the city.

It's been one year since the city found peace; one year of safe streets. It's been one year since Adam Hunter, Axel Stone, and Blaze Fielding, three former police officers took down the Syndicate that controlled the city; one year since they put an end to

Try the Combat Mode to sharpen your skills.

Mr. X's reign of terror. Their celebration was a little premature.

Mr. X is back, this time with a vengeance. He has kidnapped Adam and thrown the city into chaos. There's no one left on the force that can help them. Axel and Blaze must rescue their friend alone and put a final end to the Syndicate. They've enlisted the help of Axel's fellow bodyguard, Max, and Adam's younger brother, Eddie "Skate" Hunter.

As one of the four vigilantes or teamed with a friend, you'll face some of the nastiest tough guys and professional muscle available. Each character has their own strengths and weaknesses, such as speed, power and stamina. They also have

their own series of fifteen moves or combinations. Axel has speed and power on his side, while Blaze has deadly legs. The sheer bulk of Max is intimidating enough, but his hammer punch really hits home. Skate may be small, but he's wicked with those wheels.

Track down Mr. X through eight vicious stages. Battle it out in a bar brawl where you'll meet a beefy bartender with an attitude. Bomb-tossing bikers make things interesting as you slug it out through bridge construction, only to end up at an amusement park that's no party. Anything goes at the local sports stadium where

Graphics & Animation:	8	Although the concept hasn't changed, the graphics have taken a step forward. There are lots of new enemies, and the good guys are dressed up a bit, too. When playing with two players, the sprites seem to fade in and out.
Sound:	5	Still the same shtick, clank, and whack as the first one, and the screams have lost their oomph. The music would be better with a heavier bass kick.
Playability:	8	I liked the new special moves, and the back moves are a nice touch. To put it into perspective, the new stuff is great but the control is still the same.

S.T.O.P.! S.C.U.M.!

As a ten year veteran of the Special Task Operations Patrol, an elite branch of the police force, you've put your share of thugs and degenerates behind bars. It's time for a little vacation. You've just got to finish up the paperwork on the carjackers you just busted, then it's off to the beach with your fiancée, Cindy.

Unbeknownst to you, these carjackers are members of a road terrorist group who call themselves S.C.U.M. (Secret Criminal

Underground Movement.) Since you hauled in their friends, these road warriors have been watching with revenge in mind, planning to run you off a cliff the minute you get out of town.

The fiery crash that took Cindy's life has left you to avenge her. Thinking you, too, went down in flames, the road terrorists continue their crime spree. The force has given you the perfect cover, a vehicle to track S.C.U.M. and make them pay for Cindy's death: a souped-up sports car called the Road Avenger.

Tracking the terrorists through all types of hazards takes incredible concentration and quick reactions. *Road Avenger* takes you through some unexpected terrain: sun-drenched beaches, hotel lobbies, crowded shopping malls, and the

local museum. Dodge innocent by-standers and avoid screaming pedestrians at break-neck speeds through canyons, sewers, fields and freeways.

Road Avenger has been created by Wolf Team, the development team behind nine Sega CD titles including *Cobra Command*, *Sol Feace* and *Time Gal*. They've taken the technology one step further in *Road Avenger* by recording the soundtrack in binaural sound. This method uses several strategically placed microphones to produce the effect of real-life sound. That means that the car screeching by you on the left actually sounds as if it's on your left.

Tengen Brings You Arcade Action to Go With Super Space Invaders

From the first few beats of the rhythmic bass soundtrack, the tension begins to mount. Your heart beats faster as the pulsing increases and the space ships drop ever closer to Earth. *Space Invaders*, the arcade classic that dominated coin-op and helped the Atari 2600 grab a major share of the home entertainment market, has returned.

Super Space Invaders is a prime example that "the name of the game is the game." That is, a game with simple graphics and sound can still be a timeless success, if game play is entertaining. This **Game Gear** version from Tengen has thrown in several new features to please both the nostalgic players and those demanding something new.

Taito introduced *Space Invaders* to the coin-op arcades in 1978. It was the first video microprocessor game of its time, allowing players to destroy everything on screen, and it wasn't long before it had taken the country by storm. Originally titled *Space*

Guard against stolen cows as a bonus.

Monster, this alien invasion became so popular, production couldn't keep up with demand. That frenetically thumping soundtrack could be heard everywhere.

Duking it out with Bomberman '93!

Aloha & Congratulations!

Congratulations also go out to *Video Games & Computer Entertainment*, winner of the **Bomberman Battle**, sponsored by TTI and Hudson Soft at this year's Winter CES. The competition pitted five magazines, *VG&CE*, *Electronic Gaming Monthly*, *GamePro*, *Kids Magazine* and *Game Informer Magazine*, against one another in TTI's new *Bomberman '93*. Each publication duked it out in a fight to the finish. The winning team was awarded a trip for four to Hawaii. *VG&CE* came from behind to take the competition. Congratulations are also extended to *Game Informer's* own Andy McNamara for earning the best personal score of 310.

And Speaking of Competition...

The real heavyweights came face to face in **The Nintendo World Championship: Battle of the Champions II - The Rematch**. Jeff Hansen, the 12-year old World Nintendo Champion hailing from Murray, Utah, defended his title against 12-year old challenger Yuichi Suyama, current Japanese Nintendo Champion. These two champions had faced in Tokyo at the First World Famicom Championship held last September.

The rematch, held on January 8, 1993 at the Winter CES Show in Las Vegas, pitted the gamers against each other in timed rounds of *Super Mario World*, *F-Zero*, and the skydiving portion of *Pilot Wings*. Both competitors played like champions, with Hansen emerging victorious and retaining his World Champion title.

"It's Everywhere, it's Everywhere!"

Capcom has just signed licensing agreements with 22 companies as part of their *Street Fighter* merchandising program. Hasbro, Inc. is just one such company that has signed on to manufacture a line of action figures. Other companies jumping on the *Street Fighter* wagon include The Thermos Company, Fruit of the Loom, and Malibu Comics Entertainment, Inc., who will develop a *Street Fighter* comic book series. Entertainment Licensing Associates, a Los Angeles-based company, will serve as the official licensing agent of the *Street Fighter* line. "This exclusive and far-reaching line of *Street Fighter* consumer products will be among the most sought-after items of 1993 and beyond," Dan Kletzky, Entertainment Licensing Associates president, stated.

GI Publisher Rich Cihak and Lori Thornton of Capcom.

And the Winner is...

Game Informer Magazine awarded their first ever "Best of 1992" game awards at this year's Winter Consumer Electronics Show. **Game of the Year** went to Capcom for *Street Fighter II*, which also won for **Best Playability in a Game**. *Sonic the Hedgehog 2* walked away with **Best Graphics** and **Best Action/Adventure Game**. Sega was also awarded **Best Peripheral** for the Sega CD, and **Best Sound** for *Cobra Command*. **Best 8-bit Game** was awarded to LucasFilm/JVC for *The Empire Strikes Back*, and Bullet-Proof Software's *Faceball 2000* won for **Best Hand-Held Game**. *Bart's Nightmare* claimed the prize for **Best Game Concept** and Interplay's *Out of This World* won **Best Computer Translation**. Rounding out the awards were *NHLPA Hockey '93* for **Best Sports Game**, Enix's *Dragon Warrior IV* for **Best Role-Play Game**, Konami's *Axelay* for **Best Shooter**, Absolute's *Super Battletank* for **Best Simulation** and Sunsoft's *Lemmings* for **Best Puzzle/Strategy Game**. Congratulations to all the winners and keep those award-winning games coming!

What's in a Name?

Turbo Technologies announced they are dropping the "Turbo" from the name of their integrated CD-ROM and cartridge-based system. The name change comes after initial sales indicted the product appealed to a selective, more mature audience. The Duo, as it is now called, was released in selected markets last October and will begin its nationwide roll-out in early 1993. Already TTI has reported sales of nearly 25,000 units. The Duo plays all of the company's cartridge, CD and SuperCD games, which are now sold under the trade name of DuoSoft™.

National Lampoon Pokes Fun at Chess

Spectrum HoloByte has announced their latest release for the PC and it's guaranteed to have even the most serious chess player falling out of their seats. *National Lampoon's ChessMeister 5 Billion and 1* combines live action video chess pieces, sex, violence and a whole lot of funny stuff, in a game that provides both challenge and laughs. The ChessMeister will stop at nothing, including attempts to distract you with crazy antics. There is a normal chess board for those with no sense of humor. Look for it this March.

News Flash...

For all inquiring minds wanting to know when Street Fighter II will cross over, rumor is that Japan will be seeing it on two other systems, The Sega Mega CD and NEC's PC Engine. The Mega CD version, due out Summer of '93, will be based on the Street Fighter II: Championship Edition. NEC's version, a 20-meg TurboChip due in early '94, will be based on the original and carry the name Fighting Street II (from the original arcade). Is Street Fighter II for Genesis ever going to see the light of day in the States? Neither Capcom or Sega would confirm, but all signs point to yes.

Bomberman '93: A Three-in-One Game That's A Real Blast

- TurboGrafx-16, TurboExpress, & Duo HuCard
- Strategy
- 1 to 5 player action
- 7 stages in 1 player mode, 7 boards in multi-player
- Passwords and hidden power-ups
- 4 Megs of chaotic game play
- Created by Hudson Soft for TTI, available March 1993

Turbo Technologies has brought Hudson's classic character back to life in a game that's really three in one.

For those not familiar with this explosive character, Bomberman is a robot built to produce bombs in a factory deep underground. Bored and in search of a career change, he decided to see if there was truth to the rumor that any robot that escaped above ground became human. The only weapon he had in his struggle

to the top were the bombs he created. TTI's 1993 version has added several interesting plot twists as Bomberman makes his way to the TurboGrafx-16, TurboExpress, and Duo HuCard format.

As for the career change, our little hero has returned as Bomber Cop in the one-player, Normal Mode. The action takes place on the six planets of the Alagellan solar system. In a robbery of galactic proportions, the Evil Bomberman and six wicked associates have stolen seven vital computer chips from the Pan-Galactic Mother Super Computer. The Alagellan galaxy will fall into chaos if the chips are not returned. There's only one man for the job, Bomber Cop and his exploding arsenal.

After receiving his orders, Bomber Cop makes his way through several levels on planets like Ajanstar, the quarry planet, and Brazistar, the garden planet. On each of these planets, he must battle his way through mazes full of enemies, warp holes,

conveyor belts and other traps, before time runs out. Collect power-ups like the multi-bomb icon, increased fire power, bomb-kicking ability and remote controls. There is a password feature and a save option to pick up where you left off.

The real fun is found in the Battle Mode. Up to five players duke it out in this "King of the Hill"-style game. Choose from one to four human or computer competitors in a game of survival. Set bombs to blow up your competition and try not to do yourself in. There are seven boards to choose from, constructed of revolving passages, anti-bomb tiles, and other hazards. Power items are hidden inside boulders and bricks. Watch out for hidden skulls, as they can speed you up, slow you down or have other adverse effects. The more players the merrier in this intense-action game.

Two TurboExpress units can be connected by a communication cable to play the Versus Mode. This is essentially the same game play as the Battle Mode, except that the play fields are automatically selected and you cannot play against the computer. If you're looking for a game that's a real blast, pick up *Bomberman '93*.

Flashback

Basic Training:

Flashback has to be one of the most amazing adventure games to come along in a while. It's challenging even to the greatest players. Master some simple basics and exploration into this strange world will be less threatening to your health:

Trick A: To get an edge on an enemy, it is often easier to surprise him than to walk in unarmed. Pull out your gun and roll in firing, you'll always get the drop.

Trick B: When someone or something is below you, pull your weapon first. Then, when you drop, you'll duck and be ready to put a hole in something or somebody.

Trick C: Learn to use the Force Field. Against the Police, it's your only hope.

Trick D: Against the Morphs, the best approach is to stay low and roll left to right until they solidify. Then take your best shot.

Planet Titan: *The Artificial Jungle*

Level 1

Code: Falcon

Point 1: Drop to the bottom level and destroy Tank 2. Go left and up to surprise the Guard from behind. After knocking him unconscious, get the cartridge. This will draw Tank 1 over to the door to give you room to go back up and waste 'em.

Point 2: To get the elevator to stay down, place the stone on the first switch and go claim your prize.

Point 3: To remove the guard on the next screen, simply line up just to the left of the tree root and roll in shooting.

Point 4: These Guards are easy to outsmart. Throw the stone and the Laser Cannon will do all the work.

Level 2

Code: Data

Asia

New Washington

Europa

Point 4: As you drop to this screen draw your gun and the first Guard is easy pickings. Guard 2 can be a little more difficult. Just use the Force field when you see him about to fire and you'll get your chance.

Point 3: Make a running leap over the top of these guys, and one will shoot his buddy. Then you just turn and reward him for his good aim!

Restricted Area 3

Point 5: Get to roll into the next screen, at one step. Go in shooting then retreat to the former screen. Throw the stone to the left at the edge of screen 6. Then make a running jump over the mine to clear the hole. The one guard, to the left, will be easy money. Make sure you hit the switch at the top of the screen.

America

Point 2: The Bar is the best place to start your hunt for the escaped Cyborg.

Underground

Africa

Point 1: As you're about to complete your first job, watch out for the Cop who is waiting for you at the top of the elevator. Make sure you come up blazin'.

Restricted Area 2

Don't forget to recharge your shield.

Level 3

Code: Milord

Level 3: This is a test of your blasting skills so don't hesitate to back-track to get to an Energy Generator or Save.

Point 1: When you shoot the Cyborg he will drop and play dead. Don't fall for it. Just turn around and leave. Then when you come back, he's up again and easy bait.

The Death Tower

Point 2: Make sure to go to the right first and flip the switch, otherwise it's a long trip in vain.

Point 3: To avoid the mines, make your leap from the edge of the previous screen. Next, jump the mines and remember to roll under the ceiling mine before you make the final jump.

Now you should be off and running in this futuristic adventure. The levels are tough, but not impossible. Just remember your Basic Training and keep a cool head. Conrad will thank you later!

The fight continues...

Level 4: *Quickie*

Level 5: *Bijou*

Level 6: *Bubble*

Level 7: *Clip*

Level 8: *Cygnus*
