54 Kingdom Hearts II

ON 1UP.COM

What did we do before the Internet? To be very honest, we have absolutely no idea whatsoever—we can't imagine our days without being able to watch videos of Hurra Torpedo singing "Total Eclipse of the Heart" whenever we want. And it's also awesome for the wealth of gaming screens and videos you can find.

We've always known that *Black Creative Director Alex Ward* is a crazy man. But now we have proof we can share with the rest of the world. We

captured our day at the shooting range on tape, and you can watch it for yourself on "The 1UP Show."

For those of you who aren't happy about the Best of 2005 winners, well, don't blame us, because we didn't pick them. Instead, go to bestof2005.1up.com and sound off on all of your Internet friends for their poor taste.

And if you've read any of our reviews but want a second opinion, you can always drop on by to see what our EGM and 1UP cohorts thought.

102 The Best of 2005

#102

ON THE DVD

A DISC FULL OF SUNSHINE...

WELCOME TO OUR WORLD

Wasting money sucks, which is why it's always nice to sample the merchandise before you fork out any cash. And that's where we come in. If you want to take PS2 games for a test drive, there's only one magazine that can help you out—and that's the *Official U.S. PlayStation Magazine*, which you're holding right here in your hands. This month, we're excited to let you taste a sampler of RPG goodness with games like *Shadow Hearts* and *Drakengard 2*. Then give the next in the excellent *Onimusha* series a whirl before trying your hand at the racetrack with *TOCA Race Driver 3*. And that's just the beginning...

PLAY IT!

ONIMUSHA: DAWN OF DREAMS

Sample the story mode or try the new "test of valor"—either way, you'll have all the action-packed gameplay you could want.

SHADOW HEARTS: FROM THE NEW WORLD

Try this tongue-in-cheek RPG, complete with all the off-the-wall quirkiness you'll ever come to expect.

SONIC RIDERS

Every gaming mascot needs a racing game, right? So strap on a hoverboard and join the *Sonic* crew as you race to win that infamous chaos emerald!

DRAKENGARD 2

Let's face it: *Dragons* rule, and riding one while shooting away at enemies never gets old. You think we're kidding? Load up this demo and see.

TOCA RACE DRIVER 3

Racing fans, rejoice. The third installment of *TOCA* is here, and you can sample it right now on this lovely disc!

EYETOY: OPERATION S.P.Y.

In this demo, you're a special agent decrypting secret information by maneuvering a holographic cube. Yay for the EyeToy!

PLAY IT!

STATE OF EMERGENCY 2

Spanky MacNeil is back, and he's waging a war against the Corporation and its oppressive dictatorship.

TEEN TITANS

Switch between any of these teen heroes and capitalize on the Titans' unique moves and abilities to wipe out the bad guys in this dynamic demo.

SHADOW THE HEDGEHOG

Set your guns to rapid fire as you take control of Shadow and search for chaos emeralds and learn the secrets of his past.

NBA BALLERS PHENOM

Wanna show your skills? Wanna get noticed? Check out this trailer and see if you have what it takes to be a phenom.

FULL METAL FRENZY

See how the pros coordinate the actions of multiple infantry squads, leading them to victory.

DRIVER: PARALLEL LINES

Will this game make up for *DRIVER3R*? Maybe that '70s vibe will help.... Decide for yourself by watching this video.

WATCH IT!

COMING NEXT MONTH

PLAY IT!

BLACK
OKAMI
GENJI: DAWN OF THE SAMURAI
COMMANDOS STRIKE FORCE
DANCE: PARALLEL LINES
BEATMANIA
ACE COMBAT ZERO: THE BELKAN WAR

WATCH IT!

ROGUE TROOPER
TALES OF LEGENDIA
SHADOW HEARTS: FROM THE NEW WORLD
APE ESCAPE ACADEMY
OKAMI
DINIMUSA: DAWN OF DREAMS
RISE OF THE KASAI (REPLAY)
COLLOSSEUM: ROAD TO FREEDOM (REPLAY)
DEAD TO RIGHTS II (REPLAY)

APE ESCAPE

The next installment in the *Ape Escape* series is here, replete with pop culture parodies, unique transformations, and crazy minigames.

SONIC WEEP

Watch as the Sonic gang members race against each other on supercool *Back to the Future*-type hoverboards. Ah, if only they were real....

GRANDIA

The *Grandia* saga, with its grand sweeping plot, continues. Fans should find plenty to like about in this latest installment; check it out and see.

THE SIMS 2

Take your digital avatars with you in this PSP version, or grab a friend and use the Wi-Fi connection to trade items and have Sims hang out together.

AND 1 STREETBALL

And 1 Streetball promises to bring the sickest dunks and alley-oops ever into a game. Check out the video to see if it delivers.

DISC PROBLEMS?

Did you buy a copy of our magazine that did not contain a demo DVD? Simply send the receipt in an envelope marked "OPM Replacement Disc" to OPM Disc Producer, Ziff Davis Media, 101 2nd Street, San Francisco, CA 94105, with the name and address of the store plus your phone number and address and we'll send you the disc. Make sure you specify which month the corresponding disc belongs to in order to ensure you get the right one.

If you have a malfunctioning or nonworking demo disc, call EDS at 1-800-627-6458. We will provide instructions to obtain repair or replacement services.

Sony Computer Entertainment America (SCEA) warrants to the original purchaser of the Official U.S. PlayStation Magazine that the demo disc included is free from defects in material and workmanship for a period of ninety (90) days from the date of purchase. SCEA agrees for a period of ninety (90) days to either repair or replace, at its option, the SCEA product. You must call EDS at 1-800-627-6458 to receive instructions to obtain repair/replacement services. This warranty shall not be applicable and shall be void if the defect in the SCEA product has arisen through abuse, unreasonable use, mistreatment, neglect, or breakage during shipment. THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES AND NO OTHER REPRESENTATIONS OR CLAIMS OF ANY NATURE SHALL BE BINDING ON OR OBLIGATE SCEA. ANY IMPLIED WARRANTIES APPLICABLE TO THIS SOFTWARE PRODUCT, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, ARE LIMITED TO THE NINETY (90) DAY PERIOD DESCRIBED ABOVE. IN NO EVENT WILL SCEA BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES RESULTING FROM POSSESSION, USE, OR MALFUNCTION OF THE SCEA SOFTWARE PRODUCT. Some states do not allow limitations as to how long an implied warranty lasts and/or exclusions or limitations of consequential damages, so the above limitations and/or exclusions of liability may not apply to you. This warranty gives you specific legal rights, and you may also have other rights that vary from state to state.

THE VOICE OF THE PEOPLE...OR WHATEVER

LETTER OF THE MONTH

NAH, THE SQUIRRELS ARE **MUCH BETTER** I am an avid fan of the PS2 and all Sony products. However, I am not fond of the PSP. I feel that [the PSP] is nothing short of an attempt to market to people who only care about features rather than games. I am a fan of the Nintendo DS, and I believe that it is more suitable for people who prefer game-play over features.

I also detest the PSP commercials. Here's an idea for another ad that I think befits the PSP: One piece of fecal matter swims up to another piece of fecal matter in a toilet bowl and says, "Hey man, what are you doing?" The other piece of fecal matter responds, "I'm swimming in bodily waste!" And the other comes back with, "But don't you know you can swim in bodily waste outside?" The other fecal matter, "You're crazy! I thought it was an urban legend." And finally, the announcer with the dull voice says, "PSP: It's like bodily waste you can swim in outside."

I hope that this letter reaches the right people, because quite frankly, I am sick and tired of the PSP and its annoying commercials!

Chris Lacke
Via e-mail

For the record, Chris, OPM heartily disagrees, but we found your letter so over the top, we just had to print it.

IF IT WAS BOXING DAY, WHY DIDN'T YOU GET FIGHT NIGHT?

As I mentioned on page 112 to see the start of the "Essential 100" feature [OPM #100], a shock of dread passed through my body, as I am sure it did through many others. A top 100 list is a difficult task and just begs for hate mail. But, in this case, this is a letter of enormous gratitude. I based my Boxing Day game shopping on the list, hoping to find a "must-have" game that would blow my mind. As I was looking at *RE4*, I noticed something else beside it—two things, actually—two games that went completely over my head in 2003, two games that I regret not having paid full price for, two games that need sequels. *Beyond Good & Evil* and *Freedom Fighters* screamed at me to pay the whopping 20 bucks for them like a puppy at a pet store, so I answered their call. I am glad I did. If the "Essential 100" list were numerical, these two overlooked gems would be mandatory top-10 games. Thank you so much for the recommendations, and I am going to begin taking you fine folks more seriously than I already did. Kudos on a fantastic list, and enjoy the hate mail!

Mitchell Dyer
Carstairs, Alberta, Canada

AND IT'S DISHWASHER SAFE

I was playing *Lumines* Wi-Fi against my sister this past Christmas, after kindly giving her a PSP with the game for her present, and a funny thing happened! My room turned on the microwave in the next room, and the game was suddenly laggy and delayed, reminding me of 16-bit graphics lag back in the day. After the microwave shut off, it was all good!

Scott Whitmore
Via e-mail

STOP THOSE MORGANTOWN MOTHERS!

Editors and writers of OPM, I must ask you with all sincerity: For the love of God, why did you put the *We Love Katamari* demo on the OPM DVD [OPM #100]? You have caused me and many others distress with parental units. Mothers all around Morgantown have obsessively played this game ever since my own mother found the demo. Like wildfire, the game spread into households, trapping mothers with its addictive gameplay. To cope with this situation, I have formed a small society labeled VKOM (Victims of Katamari-Obsessed Mothers). Here we cope with luck of time with the household PlayStation in order to keep our generation sane. On behalf of all of our members, I say AGHHHHHHHHHH!!!!!!

Jack Butler
Via e-mail

GOING APE FOR ART

I was so excited about the *King Kong* game and movie that I decided to make my favorite

ape the subject of my final art project this semester. All the suckers that copied Renour paintings were mighty jealous, I'm sure.

Chima
Via e-mail

WAIT, DIDN'T TIM SCHAFFER MAKE THAT ONE?

In "The Best Games You Never Played" [OPM #101], I agreed with many of the titles on the list, but you forgot to mention another great import-only PlayStation game: *Policenauts*! Kojima's awesome follow-up to *Snatcher* is an instant classic, containing everything that Kojima puts into his games: an awesome story line, great characters, intrigue, great music, beautiful hand-drawn graphics, etc. True, this game is heavy on Japanese text, and once upon a time it had a scheduled release date here in the United States for the Saturn, but the game is still fully playable and has walkthroughs available on the Internet. In the end, it's a Kojima classic that will be the only one of his gems to never make it Stateside.

Steven Junko
Via e-mail

The article's writer, Jeremy Parish, responds: "Good call, but we were shooting for games that are a bit friendlier to the average American. (Notice the lack of RPGs?) Japanese literacy isn't necessary to blow the crap out of stuff in *Gradius* Gaiden, but in *Policenauts* the text is the point."

JAPAN ME!

OK, Japan has the best consumer stuff ever, and this month's J-Town [OPM #101] just furthers that theory. I have bought many funny/awesome stuffed animals for my girlfriend over the years from Japan, including Gloomy Bear and a "jelly" cat from *Dragon Warrior*. But a boozin' cat? Come on! I need one of those myself!

Problem is, even with some of the info from the article on Mona Neko (or Noma Neko, his legal battle counterpart) and on the band O-Zone and its label, Avex, I cannot find a single stuffed cat for sale! I checked the Internet, Japan-based stores like J-Store, and even eBay to no avail. Can you give any advice on where I can locate one of these Mona Neko cats?

Brian Conway
Via e-mail

J-Town writer and OPM Japan correspondent Andrew Vestal responds: "This adorably inebriated feline isn't sold in stores; the stuffed toys are only available as prizes in UFO catcher 'crane' machines, so you need to buy from someone who grabbed one himself. That means turning to the eBay of Japan: Yahoo! Auctions (auctions.yahoo.co.jp). A recent search for "nomaneko" in the hiragana alphabet turns up over 100 drunken salarycats, so you should have your pick of the litter. Be warned: Most sellers don't ship overseas, so you'll need to use a pricey proxy service like Celga (www.celga.com) to place your bid. Good luck!"

WHILDDAYAMEAN NO MGS4 ARCADE EDITION?!

This letter is to Mr. Wilson regarding his Outsider column in Issue #100. It's obvious that you feel your words can't inspire any change. I don't believe this. It's true that the chances that a bigwig at Sony will see your article are slim to none. However, you're counting out the most important demographic of all: the bigwigs of tomorrow. I read your article and I agree with all your ideas. This is extremely relevant because in 20 years people like me are going to be making the decisions that matter in games. At the age of 14, I've got virtually the entirety of my serious education ahead of me. In a decade or two I could very well have a hand in the next big game or console. I will tell you one thing; I will never forget the meaning behind your column. You're influencing people like me today and creating a new type of executive, a superexecutive if you will, one who knows firsthand what it's like to have

an idea that nobody will listen to. Don't get your hopes up about playing an *MGS4* arcade edition, but if I have anything to say about it, expect to see a PS4 arcade machine in a theater near you. The only thing you're deluded about is your idea that nobody hears what you have to say.

REK SUPERSLAM - INCREDIBLES: RISE

On the front of your game disc cover [OPM #100], I never knew Neo had a green reptile hand with claws.

Isaac Speed
Dallas, IA

THE WARRIORS

WHAT YOU SAID

"This is the best brawling-style game I've ever played, hands down. I love the fact that the player can be all the Warriors throughout the game. I can never get tired of the fighting. The controls are fairly simple and it's fun to dish out ass-whoppings. The voiceovers are fantastic (especially James Remar voicing Ajax). The graphics are pretty good, and the cinematics copied from the movie are awesome. The gameplay can never get tiring, and my friends and I have fun with the multiplayer. The minigames, like running from the Furies, are fun, too. I think Rockstar did an excellent job of making this movie into a game." Luther

READER SCORE

5.5

WHAT WE SAID

"Rockstar obviously went to great lengths to nail the movie's feel, and it pays off. When you hit the actual movie-based scenes near the game's end, you really feel a part of the world—a world that is far deeper and more organic than any other brawler's in years."

OPM SCORE

4.5

Want to have your say about a recent game? Think you can do better than us? Send your review (don't forget the score!) to opm@ziffdavis.com with the subject "READER REVIEW."

BLOG OF THE MONTH

Josh Williams offers helpful tips on how to get Blog of the Day on JUP. Maybe his advice can get you Blog of the Month at JUP!

"What makes the JUP blog of the day?" I, Topic: Pretty self-explanatory, but it is all the meat of a blog. Anyone can write about a game that they just played, what they did on the weekend, or a party that they went to, but remember that this is a gaming site, not just a site about games.

I would think that the topic would have to include something about gaming, such as finding a bunch of rare, collectible games at a retro gaming convention, ranting about the latest piece of crap, or simply expressing your thoughts on the latest industry happenings.

I would think of it like this: A bare-bones topic won't get you noticed at all, but a topic with feeling will get some people interested.

GAMERS ARE TALKING ABOUT
STRAIGHT FROM THE OPM MESSAGE BOARDS (BOARDS.TUP.COM)

100 PLAYSTATION 1, PLAYSTATION 2, AND PSP GAMES YOU MUST PLAY BEFORE YOU DIE

THE BEST YEAR EVAR?

The *OPM* message boards have been sprightly of late. A particularly lively discussion was sparked by our "Essential 100" in *OPM* #100 in this post entitled "After reading *OPM*'s 100 Best List..."

GTChampion presses Start: "What in your mind has been the best year for the PlayStation? For me it was 1998: *Gran Turismo*, *Metal Gear Solid*...man that was awesome. It's also the year I got my PlayStation. I guess I picked a good year. Anyway, what's yours and why?"

Irishmatt already feels pressure, but comes through: "Probably 2004, if I had to choose. *Killswitch*, *Psi-Ops*, lots of

SOCOM II online, and plenty of other titles I can't think of at the moment. I just know I poured a ton of gaming time into my PS2 that year."

With a long list that includes *Front Mission 3*, *Vagrant Story*, *Final Fantasy IX*, and *Chrono Cross*, chocomag33 has not a doubt that 2000 was the year. Mike900 gets a tad off-topic with this not-too-subtle threat to the editors: "Suikoden II That took the cake, no questions asked. That game owned me, and I would have burned my *OPM* collection if it wasn't in [The Essential 100] list."

FROM ME TO YOU

Dear Everybody,

Have you heard? The PlayStation3 is coming this year! Are you ready? Seriously, are you?

It's an important question: At *OPM* we aren't quite yet. There's still plenty to look forward to on the PS2 (*VFXII*, *Godfather*, *Okami*), and *Tomb Raider: Legend* to name a few), and the PSP is looking good with the likes of *Metal Gear Acid 2*, *Syphon Filter*, and *Daxter*.

Part of the "problem" is that Sony has given only enough information about the PS3 to get everybody hot and bothered. Beyond the obvious "it'll be better than anything you've ever seen before," what we really know isn't a whole heckuva lot. We all want to know the ship date (sooner than you think!), the cost of the system (expensive at first), the cost of the games (\$70 is not unrealistic), and the list of launch titles. And what about online play? What about HDTV needs? What about GTA4?

But what we *do* know and can share with you is that the PS3 will be awesome. C'mon, you know you can't wait. And neither can we. In the coming months, beginning with the April issue, you'll see a big leap in *OPM*'s PS3 coverage. We are, after all, the official mag, and we want to make sure you have the official word.

With E3 barely three months away and the Xbox 360 come and, I'd say, go ahead and mark 2006 as the year of the PS3.

Take care,

Tom Byron, Editor-in-Chief

Are YOU ready for the PS3? What are your big questions? Which games are you looking forward to most? Let Tom know at OPM@ziffdavis.com

CAPTAIN AMERICA • THE INCREDIBLE HULK • THOR • IRON MAN • WASP • GIANT MAN

MARVEL'S MIGHTIEST HEROES COME TO LIFE IN THEIR FIRST EVER ANIMATED MOVIE!

"...Ultimate Avengers steps on the accelerator from the first scene and never lets up for a thrill-a-minute ride."

-Wizard: The Comics Magazine

Inspired by Marvel's best-selling books, "The Ultimates," this is the extraordinary story of some very independent super heroes who, like it or not, must fight as one to save the world.

Expect the unexpected on your journey: destructible walls, hero-killing traps, and a series of in-game objects that must be investigated and manipulated.

Untold Legends™ The Warrior's Code™ comes to life with brand-new, enhanced graphics, character animations, environment lighting, and special effects. This time around, voiceovers help tell the story, and new cut-scenes highlight the plot like never before. Combat has been improved, allowing up to six spells to be mapped to the PSP™ system's controller buttons and triggers and enemies now feature a tougher set of artificial intelligence behaviors making them both stronger and smarter.

An all-new action role-playing game, *Untold Legends™ The Warrior's Code™* is the sequel to the number one PSP™ system RPG* game, *Untold Legends™ Brotherhood of the Blade™*. You play as a shape-shifting adventurer, gifted with the ability to transform into a ferocious animal for short periods of time. On your quest to save your people from destruction, you'll need to hack and slash your way through hordes of monsters and 12 massive boss enemies before reaching the greatest evil of all...

It's hard to believe an adventure this big could fit on a handheld. A magical realm, one fraught with peril and 40 diabolical creatures, awaits. Choose from one of five character classes, each with its own unique skills and transformation abilities. Wield devastating weapons, cripple foes with all-new Attacks of Opportunity, and hurl killer spells as you explore more than 45 painstakingly hand-crafted, highly-detailed 3D environments.

Go online with *The Warrior's Code's* multiplayer options. Up to four combatants can duke it out in a no-holds-barred player-versus-player competition. A cooperative mode lets you and a friend explore the game's story mode together, working in tandem to solve puzzles and defeat foes. New chat- and matchmaking options make finding and talking with fellow adventurers a snap, and online play blends seamlessly with solo action; any items and skills acquired in multiplayer can be used in solo play and vice-versa.

*According to NPD Group as of October 1, 2005

LIVE THE WARRIOR'S WAY

Become a spell-casting wizard. Take the role of a brutish swordsman. Slay your enemies as an assassin with a dual-bladed weapon. Rain death on all who oppose you as a bow-wielding scout. It's your call with *Untold Legends™ The Warrior's Code™* for the PSP™ (PlayStation®Portable) system.

THIS ADVENTURE IS LEGENDARY. AND ITS TALE WILL BE TOLD IN MARCH.

THE CRYSTAL BALL

A LOOK BACK ON WHAT WAS IN THE YEAR 2005 AND WHAT WILL COME TO BE

From just about every angle, 2005 will be a year to remember in the annals of videogame history. Not only did we see two new systems on store shelves and three new system announcements, but we also had some of the best games and many groundbreaking events that will define the videogame industry, for better or for worse, in the years to come.

GTA ROLE REVERSAL
Rockstar has announced that they will be porting *Grand Theft Auto: Liberty City Stories* from the PSP to the PS2, making the first time a publisher has done a port from the handheld to the full-size console. We hope this doesn't start a trend of cannibalizing new titles—otherwise, what reason do we have to own a PSP?

**WHAT HAPPENED?**

Ports aplenty between the PSP and PS2.

WHY IS IT GOOD?

Some games allow you to transfer data between the versions, allowing you to take a home game on the road. Other PSP ports provide a quicker, simpler, more visceral version of their console cousins.

WHY IS IT BAD?

Most ports appear to have been undertaken with little or no recognition of the special requirements of portable gaming. Poor control schemes, long load times, and simple design errors make it seem as though many designers are taking the quick and easy route.

WHY DOES IT MATTER?

Sony has always made a big deal out of the connectivity between the PSP and the PS2. While this seems like a cool feature, it's given developers an excuse to phone it in when it comes to PSP games. Do you really want to pay around \$80 to play what amounts to the same game on two systems? Hopefully, we'll see some more creativity in 2006 with the arrival of *Killzone* on PSP and fewer straight ports. And let's face it: A major reason why you buy new hardware is so you can play games on it that don't really exist anywhere else, which is part of the reason why the Nintendo DS was so successful in 2005 and will probably continue to be successful in 2006. Sony needs to capitalize on the portability of the PSP and encourage developers to try new things and not just rely on console ports.

WHAT HAPPENED?

System launches—two of them to be exact. The PSP and the Xbox 360 both jumped onto the scene.

WHY IS IT GOOD?

New hardware is a great thing. It gives developers a chance to strut their stuff on a technical level, and it usually means that we see a few new gameplay ideas thrown in as well in an attempt to take advantage of the new technology.

WHY IS IT BAD?

In the case of new consoles, 2005 meant higher prices for next-generation games. Xbox 360 games retail for \$60, suggesting that PS3 games will be around the same price, if not more. Also, as with any system launch, there's the problem of game supply. The PSP hit a huge drought in the months following its launch, leaving little reason for anyone to pick up a system unless they were really keen on watching movies. The Xbox 360 seems to be facing a similar problem over the past few months, along with supplies of the console not meeting demand.

WHY DOES IT MATTER?

Basically, Sony can learn from its own mistakes and the mistakes of the others, and it seems like it already has since the hype machine has been kept in check. As Sony CEA's president, Kaz Hirai, told *OPM* in Issue #100, Sony is taking its time, ensuring that the launch is done on the company's own terms and that it's not being dictated by market conditions. Hopefully, we'll see a steady stream of reasonably priced games.

WHAT HAPPENED?

Licenses, licenses, licenses.

WHY IS IT GOOD?

Most things associated with licenses had an interesting time in 2005. Movie licenses in particular had a good year. Ubisoft's *King Kong* turned out to be great, as did Rockstar's *The Warriors*. In sports, the NFL-exclusivity development pushed companies such as Midway to come up with something original, proving you don't need the NFL license to have fun.

WHY IS IT BAD?

Exclusivity is a terrible thing, even if it spurs the creative juices in the minds of other developers. It raises potential issues by being "the only game in town," so gamers have no choice if they want to play something associated with a particular license. Lack of creativity is still a problem with licenses as well since developers have the tendency to rely on the license, as opposed to the content, to sell a game—a scenario that can be applied to Electronic Arts' *From Russia With Love*.

WHY DOES IT MATTER?

As big a deal as they were last year, licenses are going to be even bigger in 2006. *The Godfather* and *Scarface* are just two of the movie-based games that have enormous budgets behind them. Also, with Hollywood returns dwindling, look for the studios to push licenses to game developers and publishers even more, which could be really good or just flat-out awful for the industry.

WHAT HAPPENED?

Online gaming got bigger than before.

WHY IS IT GOOD?

In most people's eyes, online play significantly extends the life of a game, and in many cases, it can be the star of the show.

WHY IS IT BAD?

Xbox Live—it shows what Sony needs to do with online services, yet the company seems so hesitant to embrace that model.

WHY DOES IT MATTER?

Online gaming is going to be a huge part of the next generation of consoles. The Xbox 360 has already set the tone, and it's up to Sony to match what Microsoft has done by including some excellent online features right out of the box. Unfortunately, Sony's being really quiet about the whole thing, and just about all the clues suggest that the PS3 won't have an Xbox Live-type service, but we'll just have to wait and see. Epic's Mark Rein suggested to *OPM* in Issue #95 that the PlayStation 3 would feature an open network, similar to the one that the PlayStation 2 has right now. Ultimately, that would probably be better for developers since it gives them more control over their own servers, but as Xbox Live has illustrated, the infrastructure model, in which all online features adhere to a single design, seems to be far more successful. Of course, it's always possible that Sony can find a way to make the former model work by using some method we haven't considered yet. |

PS3 WATCH

THE HISTORY OF THE PS3'S CORE TECHNOLOGY

When you think of the PS3, you think of the Blu-ray disc. But the real story is in the silicon. The PS3 is a marvel of engineering, combining the best of both worlds: the power of a PC and the precision of a console. At its core, the PS3 is built on the Cell Broadband Engine, a revolutionary architecture that allows for unprecedented performance. This is the heart of the system, the engine that drives everything from the most demanding games to the most beautiful graphics. The PS3 is not just a console; it's a statement of technological ambition. It's a machine that pushes the boundaries of what's possible, and it's only getting started.

SONY CHOSE TO FOCUS ON THE CORE TECH BEHIND THE SYSTEM.

The PS3's success is a testament to Sony's commitment to innovation. They didn't just want to make a console; they wanted to create a new paradigm. The Cell Broadband Engine was a bold move, a departure from the traditional x86 architecture. It was a risk, but one that paid off. The PS3 is now the most powerful console on the market, capable of handling the most demanding games and graphics. It's a machine that's built to last, and it's built to shine. The PS3 is the future of gaming, and it's here now.

www.sony.com/ps3, www.sony.com/cell

BLU HEAVEN

Haven't been keeping up with your Blu-ray news? Here's a quick rundown of the format's highlights

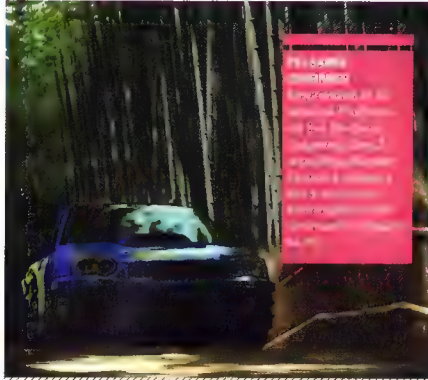

- 25GB of storage per layer (a DVD can store 4.7GB per layer)
- Resolutions up to 1920x1080p (twice as high as all but the most high-end televisions currently on the market)
- Nine hours of HD video (a DVD can store roughly two hours)
- 26 hours of standard-definition video
- Backward compatibility

OVERHEARD

Remember *Motor Storm*, that off-road racer whose PS3 trailer dropped almost as many jaws as *Kilzone* did at E3 2005? It stars in the most intriguing PS3-related tidbit we stumbled across this month. During our interview with Criterion's Alex Ward for our exclusive *Black* review (page 76), Ward let slip the following nugget: "[This is] something I, er, overheard in a pub somewhere," he cautioned. "I was speaking to some, ah, friends of mine in the industry, and we were talking about those videos we all saw at E3, and the big question on many gamers' lips was, 'Can the games look like that?' And a couple of people I spoke to, who I trust to probably be in the know, said that they thought that *Motor Storm* was coming along really well and would be very close to, if not better than, those videos. And that -- as a developer and as a gamer -- is something that gets me excited."

Ward's comment is a testament to the power of the PS3. It's a machine that can handle the most demanding games and graphics, and it's only getting started. The PS3 is the future of gaming, and it's here now.

ALEX WARD ON THE NEXT GENERATION

DPM You have *[Black]* running on PS2 and on Xbox, but you've been demoing it on PS2. Why?

AW That was the one hooked up into the big TV, honestly—though we always lead on PlayStation 2 at Criterion; we're specialists on that system. We probably know more about the system than anybody. This generation, to us, has always been about making big, multimillion-selling PS2 games. But the game is also on Xbox, and the differences are minor. A lot of people get confused and think that this means we're not trying on the Xbox version or we're lazy. No. We try to make the PS2 version look like the best Xbox game you've ever seen. We've

"WE TRY TO MAKE THE PS2 VERSION LOOK LIKE THE BEST XBOX GAME."

always done that; we push hardware hard in our office and we get the best results. A lot of people asked us to take *Black* and launch straight-away on the next-generation systems, and we decided not to do that.

DPM How important is the technological advance of the next generation as compared to the value of experience in developing for this generation?

AW There are a lot of developers out there talking about the next generation, talking about technology. In my mind, a lot of these developers didn't make any good games on PS2, so why should we believe they're going to make anything good on PS3? When Rockstar starts to talk about PlayStation 3, I'll be listening. When Kojima talks more about PS3, I'll be listening. When Kazunori Yamauchi talks, I'm listening. When some of the other guys, who haven't put a game out at all in five years, are talking to me about it, I'm not as interested.

Go back to the PlayStation 2 launch. There were a lot of developers there waxing lyrical about it—but some of them never made any games for PS2. They're the same guys talking the same [things] at every hardware launch, talking about the joys of gaming and technology will bring. To me, as a gamer, I always think, "Shut up and show me your games."

DPM What about the demos shown for PS3 so far?

AW I saw that *Metal Gear* stuff in Japan and was immediately talking to people back in the office who thought, "It's just a video; it's all fake; it's not going to be like that." And then, of course, [Kojima] played it the next day. So I'm excited. For a gamer, this is the best year yet. |

i play. i win. i gloat. i kick back. i catch a movie.

THE OUTSIDER

YOUR BRAIN ON FATAL FRAME

Recently our band was in the studio recording a new CD. Our records are mostly guitars, so when I wasn't singing I found myself with a lot of free time. As much as I enjoy telling our guitarists what to do and how to play, I gave everyone a break and spent a good deal of time playing videogames in the studio lounge. I loaded up with all the holiday hits and shared the PlayStation gospel with the studio staff.

At one point during the sessions, we received a visit from our record company

stride. "Any kid who knows his way around these games could easily manage a squadron of needy samurai or even handle a cash register."

It went on like this for a while, with me showing off the year's best games. I even gave AI a tour of San Andreas and made some attempt to explain the controversy and appeal of *Grand Theft Auto*. But eventually I noticed him eyeing his watch and realized he was probably trying to figure a classy way out of the conversation.

"VIDEOGAMES ARE FUN BECAUSE OUR BRAINS' PLEASURE CENTERS ARE STIMULATED."

president (hi, Al). He spent most of the day watching (and listening to) guitars being recorded, but eventually he got bored enough to come looking for me in what had become my "game lounge." AI is an intelligent nongamer and he peppered me with great questions about the games: How are they made? What types of skills are required? How do they affect the brain? What's the deal with *Grand Theft Auto*? Clearly he was bored and trying to kill some time before his flight.

"So, these games take a lot of skill, huh," he began.

"Well, not this one," I told him. "This is *Fatal Frame*. If you can read a map and push buttons, you can play this. But I suppose it does involve some light problem solving and resource management."

"No s***," says the millionaire CEO, impressed.

"Oh sure," I tell him, just hitting my

The encounter got me thinking, and I decided to visit the library to read up on videogame research. (Ironically, while at the library, I spent most of my time on the Internet.) I found what I was looking for, and it turns out that science is figuring out what we gamers already knew but didn't articulate. Apparently, videogames are fun because our brains' pleasure centers are stimulated when we learn stuff we enjoy. What a shock. Videogames are great teachers, and more than a few learning researchers are trying to figure out how to employ them to teach us practical stuff, like math and how to fit into the Army.

Many videogames require multitasking and enhanced visual abilities. When playing, we prioritize objectives and resources, delay gratification, and often exercise nerve-bending patience. But then, anyone who ever played a *Castlevania* game could have told you that. I

PLAYSTATION BITS

As the holiday season approaches, we're looking for some new ways to spend our time. One of the best ways to do this is by playing some of the new games that have been released for the PlayStation 3. We've got a list of some of the best games to play on the PS3, and we've also included some information about the new games that are coming out in the near future. If you're looking for a new game to play, be sure to check out our list of the best PS3 games to play.

WHAT'S IN YOUR PSP?

SHINTA NOJIRI

Shinta Nojiri, director of *Metal Gear Acid 2*

GAMES

I'm actually playing the retail version of *Acid 2*. I'm collecting all the cards without using my debug tricks. So far I've got 255 out of 555 cards.

MOVIES

Let me tell you what I want to see—*The Adventures of Sharkboy and Lavagirl in 3-D* using our Solid Eye 3D goggles.

MUSIC

I don't listen to music on my PSP because I've got the Offspring MP3s loaded into my cell phone.

WEB

I use it to check up on American game sites like 1UP. I

THIS MEANS WAR!

It's a dangerous world out there, and only you can save it from total destruction.

Take control of a powerful army in a no-holds-barred battle for supremacy with Field Commander™ for the PSP™ (PlayStation® Portable) system. But be warned: these turn-based wars will test your wits and challenge your mettle as a general.

Command 36 different land-, sea- and air-based forces such as foot soldiers, battleships, and bombers, on gorgeous 3D battlefields. Order your special operatives to use long-range artillery strikes on unwitting foes. Move your infantry into a factory to capture its production and turn out new units for your side. Tear the heart out of the enemy's defenses with an unstoppable armored

blitzkrieg, and then win the fight by taking control of his headquarters. Call in air strikes to soften up foes in defensive positions. Seize the high ground to give your forces a tactical advantage and witness the devastating effects of your strikes.

With more than 30 single-player missions, 15 different army divisions, and 11 generals to choose from, Field Commander offers lots of strategic options. As commander-in-chief, you'll need to pit strength against weakness and utilize all the special abilities at your disposal to defeat an increasingly difficult and ruthless enemy army bent on world domination.

Even after you've won the war in the game's deep story mode, the battles rage on. You can take the fight across the globe with multi-player battles via the PSP™ system's Internet and wireless. Or create your own battlegrounds and combat missions, and then share them with other players, regardless of whether they're in the same room or continents away.

Defeat is not an option. Surrender has been removed from the dictionary and your vocabulary. Use the greatest weapon of all-your brain. Or die trying.

The war begins this March.

Detailed terrain and explosive effects bring these battles to life; tanks spit fire, cannons roar, guns chatter. Load your troops onto armored carriers and then quickly move them along the roads. Barricade your forces inside of cities. Execute ambushes from the cover of forests. Field Commander lets you use the battlefield to your tactical advantage.

FEEL

F113 HELLCAT

Confederate Motorcycles (www.confederate.com)

Sweet lord! If someone from the future were to travel back in time to save the world from exploding or being taken over by an army of rampaging eggplants, then surely he or she would be riding this motorcycle from Confederate Motorcycles. The F113 Hellcat is not only obscenely awesome looking, but it's also 1800cc, and anyone familiar with the *Maro Kart* games knows that's pretty darn fast.

PIRATE GUNS

DaVIDe Pedersoli (www.dsvide-pedersoli.com)

The only reason we're game journalists is because we can't be pirates. But if you gave us the choice to swap out our DualShock controllers for a ship's wheel, we'd be sailing the seven seas. Eye patches affect our ability to play games, which is why we're enamored with pirate guns—even though we're chained to our desks, having one of these babies strapped on still puts the swash in our buckle.

SEE

THE BAD SLEEP WELL

Akira Kurosawa
(www.criterionco.com)

If you thought Hamlet was way too Danish, and that director Akira Kurosawa and actor Toshiro Mifune only made samurai movies, then you should check out this DVD. Mifune plays a corporate executive who seemingly marries his boss' daughter to get ahead in the company, but in actuality, he's working on a plan to avenge his father's death. It's a snazzy blend of *Hamlet* and postwar Japanese corporate culture.

THE DEVIL AND DANIEL JOHNSTON

Daniel Johnston
(www.hihowareyou.com)

Most people who have bipolar disorder and live in their parents' basements don't really have big professional successes. Daniel Johnston, however, rose above that to become one of the most revered underground artists and musicians, inspiring people ranging from Kurt Cobain to Matt Groening. Now, a film portrait of the man and his unusual genius is finally coming to theaters in limited release in March.

LISTEN

PANDORA

Music Genome Project (www.pandora.com)

Finding good new music can sometimes be tough. Your friends will always have suggestions, but let's be honest—your friends can have pretty crappy taste. Enter Pandora. It's a website that lets you build your own radio station of streaming music. Simply enter artist names, and Pandora will stream songs from other similar artists. If it plays something you don't like, simply click a button to remove that song from the broadcast for good. Get a free subscription with ads, or pay a fee to get an ad-free experience. Yay for music!

THE RICKY GERVAS SHOW

Ricky Gervais (www.guardian.co.uk/rickygervais)

OK, most podcasts are just guys in their basements yammering about geeky stuff like mimpaps and ruter bitrates. What makes this one different is that it's two very nontechnical and hilarious guys—Ricky Gervais and Stephen Merchant (collaborators on *The Office* and *Extras*)—and their dim-witted associate Karl Pilkington, who spouts off the most bizarre opinions known to man. We'd like to try to explain the context of things like "files and condoms," "vampire pirates," or "banana-dispensing spaceships," but it's better that you download and listen to this podcast yourself.

TRENDSPOTTER

COLLECT THEM ALL

For the love of good gravy, why are we seeing so many collections as of late? Look, we like old games as much as the next 20-plus-year-old demographic that these classic collections are geared toward, but we'd much rather see some new stuff than just a straight-up port. How about some new graphics and sound to go along with classic versions of the game? Is that too much to ask? If you really want an old game that badly, eBay is right around the corner, kids. Oh well, maybe it's for the best. We wouldn't want the industry to go all Ted Turner and perform the equivalent of adding color to films that simply were meant to remain in black and white. I

THEY JUST DON'T GET IT
STOP THE LEGISLATION TRAIN, I WANT TO GET OFF

Even after receiving the glowing endorsement of a prominent conservative news anchor, the bill passed in the House of Representatives and is now being designed to prevent the sale of video games rated M and R to minors.

A SIMILAR BILL WAS RULED UNCONSTITUTIONAL.

to violate the First Amendment right to freedom of speech by a U.S. District Court in California. The court ruled that the bill was unconstitutional because it targeted video games and not other forms of entertainment. The court also found that the bill was overbroad and violated the First Amendment.

GAME ENJOY

WHAT WE WANT ON THE PLAYSTATION. ANIMAL CROSSING: WILD WORLD

No, we haven't suddenly regressed into a staff of babies, but there are quite a few aspects of *Animal Crossing* for the DS that we're jealous of. This title demonstrates that a game that lacks shooting action and/or massively multiplayer gameplay can still build and foster an online community. Besides the online multiplayer community, *AC* also features open-ended gameplay in an easy-to-grasp package, which makes it one of the most mainstream-friendly games out there (we're fans of games that widen the market). Plus, we'd rather have a new and interesting game that emphasizes socializing, debt repayment, tree planting, letter writing, and T-shirt designing as opposed to yet another game that has a gun, or a sword, or a sword duct-taped to a gun. LIFE AFTER GOD OF WAR

IF you think David Jaffe is some big-headed developer who lives in an ivory tower where good game ideas just drop into his head 365 days a year, well, he's not. He's a normal guy—a family and bills to pay. And while game development is still one of his numerous passions, the man behind *God of War*, like everyone else, still has to find the motivation to get up, get dressed, put on those shoes, and go to work every day. Find out what's next for the man who has been, quite literally, the talk of the videogame industry.

PHOTOS: KATE ZAVIERO

OPM You mentioned in your blog recently that you ran into Tom Hanks and got a little starstruck. Does it ever occur to you that a kid walking down the street would get the same feeling if he or she knew that you were the guy behind *God of War*?

DAVID JAFFE What's interesting is that right after *God of War* came out, I did see my recognition go up a bit more. I was at Taco Bell a few weeks after it came out, and this guy was giving me my burritos, and he's like, "Aren't you the *God of War* guy?" I was really taken aback because it was the first time that anyone had really recognized me individually. It was kind of cool, but it was kind of a strange thing because I wanted to go back to Taco Bell—I dug it so much. Celebrities are cool and I get a charge when I see them, but I get embarrassed.

It's kind of strange when people treat you a little differently because you've done some interviews in magazines or you've been on the Internet. I don't know, I'm kind of rambling because I'm not really sure how I feel about it. It speaks to the very negative and damaging obsession our culture has with celebrity and fame and success. On one hand, I participate in it because it's enjoyable, but on the other hand, I think this is a bad thing that I don't really support. I'm always going out of my way to try and make it very clear to people that I'm just this normal guy and that everyone I've met in games, for the most part, are just normal guys and girls who make games. We're just people. I'm conflicted by the whole thing, frankly.

OPM How does it make you feel knowing that these well-known developers—like Kojima and Miyamoto—have talked about you and *God of War*?

DJ It's funny because I was talking to my wife about this the other day, because of the *EGM* where Kojima and Miyamoto are talking about *God of War*. I actually ran into and met Kojima for the first time at the Hollywood Bowl. He came up to me and talked to me about *God of War*. I was really jazzed by that. This is amazing [because] these guys make games that I love and they're titans of the industry. The fact that they're aware of me, let alone enjoying what I'm doing and what the team I'm with is doing—that's pretty cool. But at the same time, it's weird because it goes back to that whole celebrity thing.

You know, the two biggest idols of my life are Steven Spielberg and Stan Lee. I met Steven Spielberg when I was 18 years old, and I was blown away. I could barely breathe because I was so in shock. Stan Lee and I had a sit-down meeting two weeks ago, sitting in his office face-to-face. After about five minutes, the starstruck nous fell away and

he was just this guy. The same thing applies to Miyamoto and Kojima. You get to a position in your career where you're able to meet these people and make these connections, and from a creative standpoint, it's very exciting. It's very exciting to talk to Kojima about games. It's exciting to hear what Miyamoto has to say about games and what Stan Lee has to say about writing. From a personal standpoint, you think it's going to be more than it is—he's just a guy, and at the end of this Hollywood Bowl event, he's going to get into his car and drive home and I'm going to get into my car and drive home. It feels like it should be more than that, and it really isn't.

OPM So why do games? What drives you to do them? What's in it for you?
DJ That's a good question—it changes. Right now, as we speak, I'm definitely at a place where I'm questioning that myself. If you were looking at the years that I was doing the *Twisted Metal* series, the driving force back then was making it. Everyone has his or her own definition of what that means, but for me it was making enough money so

and I'm trying to figure out how to get this level to work in our new game for the PSP. That's all there is. On one hand, that's nice because all of the bulls*** goes away and you ask yourself, do you truly enjoy the work of being a game designer? There are days where I find the answer is a resounding yes. I'm obsessed with it and I love it. Then there are days where I just want to f***ing get out of here and go see the movies because I'm so not in the creative zone. I don't know if that will be for the rest of my career; if it'll all be about the work or if something else will come along. Ideally, it would be nice to get really, really rich off of this, but that isn't happening right now. We're certainly paid really well at Sony and in the industry. None of us, with the exception of a small few, is living up in a mansion in Malibu.

OPM So would you say you haven't reached a balance between your work and your personal life?

DJ I'm still struggling with the balance. I'm reading a book right now called *Memo From David O. Selznick*. It's basically a lot of the relevant memos

DJ That's the only thing that's driving me to do this new game with IncoGito and the guys who I made the *Twisted Metal* series with. I love games and I love to play games that are fun, but I'm not a hardcore game guy. I love movies probably more than games. I love comic books more than games, just as a fan. I love games and I play them all week long, not just because it's my work—I genuinely love it. But my goal right now is, can we actually make a game that's emotional and has thematic, political, and emotional resonance? That challenge is enough to move me forward because it's very important to me, and that's the only reason why I'd like to keep making games in the capacity of a director. If it turns out this game doesn't work because it's not fun—and I don't think that's going to be the case: I think it's going to be more of a case of not getting the emotional stuff or political stuff to work—at that point I might hang up the hat from a director's standpoint. I'd still do the creative director job. I want to. I think I'm good at it and I like working at Sony. If we can't move the genre and the medium forward in the sense of starting to provide more rel-

"THERE ARE DAYS WHERE I JUST WANT TO F***ING GET OUT OF HERE AND GO SEE THE MOVIES."

that I was stable. I was a kid coming out of college with no money, and it was all about making enough money to support myself and to have a nice life. I also wondered, could I achieve a little bit of fame? I thought that was really important at the time and something I really thought I wanted. Can I do interesting work? Because I achieved those things with *Twisted Metal*, I got to a point where I don't care if I get fired. I don't care if this tanks my career. I want to work with a team to make the game I've always wanted to play. [*God of War*]. I'm going to give it my all, pour all of my energy into it, and damn the sacrifices, which were health and family and everything else. I think the game we ended up making turned out pretty well. I'm very proud of it and there's very little I would change. Now I find myself thinking I've done that, and so now I don't know what drives [me]. Some days, it's just the sheer enjoyment of doing the work, but all of the other stuff that used to drive me—the desire to make the ultimate game, money, a little bit of fame—all of those things have dropped away because I've achieved all of them. All I have right now is the work.

Right now, I'm sitting here at my whiteboard with my dry-erase marker

while he was an executive at MGM and RKO. The subtext of it deals with it being his life. It was his obsession. You definitely get the sense that this guy never found the balance in his life, and for me, it would be so easy to abandon everything and just live in this office like I did during *God of War*. There's a part of me that would just love to do that. There's a part of me that would love to eat, sleep, and breathe this job because it's so much fun and so fulfilling when it works. But it really does come at a cost.

Today is Friday, as we're talking, and the weekend is coming. I can't wait to spend it with my wife and kids and get lost in things that aren't game related. But I know I'm going to be totally stressing over my game and wondering if it's good and wondering how we can make it good. It makes for an interesting weekend because you're being pulled in both directions. Both of them are important and both of them are things you're passionate about, but it's tough to find how to make both things work.

OPM If *God of War* was the ultimate game for you, has that ever made you wonder what you're supposed to be tackling next? Do you find yourself creating new challenges?

event stories and emotions, then I really don't want to keep doing this.

OPM You've also mentioned that you have been changing as a designer. Has age been a factor in that? How do you know what works for you?

DJ I think that's just growth. You do it long enough and you start to realize what works and doesn't work for you personally. There are things I've gotten away from now. For example, the new game I'm doing has no cut-scenes—that's a criteria for the design. If we can't tell a story in the interactive, then it's not worth telling. [With] the game that we're doing now [*HL* for the PSP], I'm struggling with how heavy-handed we want to make the storytelling and the messaging versus just letting the player experience the interactive. So as I get older, I'm certainly embracing the interactivity or the interactive aspect of games, which is sort of an asinine thing to say because all games are interactive. If you look at *Twisted Metal: Black*, even though I'm still proud of aspects of that game, I still think it's very overdesigned. I put so much effort into the vibe, the emotion, and the stories—all of this periphery bulls*** that was cool and neat. It worked for a lot of people that

GAMING NEWS FROM THE EAST

Reports of the Japanese game industry's demise have been greatly exaggerated.

Exaggerated, but not completely fabricated; there's no denying that the Japanese game industry is in the midst of some tough times. During the PS1 days, even mediocre triple like *Saga Frontier* managed to sell over a million copies domestically; nowadays, even big-budget games are lucky to pass 200,000 copies. The market's still vibrant, healthy, and expanding overseas—so what's wrong with the Japanese gaming market?

Conventional wisdom holds that cell phones and the used-game market are responsible, and the effect of those two is impossible to ignore. The Internet got off to a rocky start in Japan; until 2002, draconian legislation limited companies to a single domain name and forced expensive hosting with a small cadre of "accredited" ISPs. Also, Japan's national telecom monopoly charges high per-minute rates, even on local calls. Customers decided that if they had to pay per-minute, they might as well go portable, and a proprietary "Internet" of phone-based services soon sprung up. Consequently, gamers with 20 minutes to kill on the train ride to work *could* bring a PSP (and many do), but they already *have* a phone. The cell-phone division is the most profitable sector of even huge companies like Namco, Konami, and Square Enix. With low development costs, a huge install base, and digital distribution, cell-phone gaming is a publisher's dream. But every dollar spent on cell-phone gaming is a dollar that doesn't go to console gaming, so the market shrinks.

The used-game market has a more direct impact on the industry. Games in Japan are more expensive than in America—*Dragon Quest VIII*, for example, costs 8,800 yen, or nearly \$75 U.S. dollars. That's a lot of money. After completing a game, most gamers look to recoup whatever part of their "investment" they can: enter the used-game shop. Unlike the scratched-up, \$2-off-MSRP crap that passes for used in America, used Japanese software comes in immaculate condition—and substantially discounted. Let's take *Dragon Quest VIII* as an exam-

ple. Stores might buy that \$75 game back for \$60 the first two weeks, \$50 the next two weeks, and \$30 the following month, and sell it for \$70, \$60, and finally \$40. Rapidly dropping prices encourage gamers to play through a game as quickly as possible and resell it—meaning the same copy shows up in stores again and again. High turnover means high buyback prices, which is good news for gamers and used-game shops. Developers and publishers aren't happy, though—they never see a single yen of any transaction after the first one.

So while these are the most common reasons given for the troubles in the Japanese game industry, I feel there's another, more serious problem: the games themselves. Faced with a shrinking market, developers are slashing the budgets of even A-list games, turning "completely new experiences" into "more of the same" and ignoring

SQUARE-ENIX SOLD 900,000 COPIES OF KINGDOM HEARTS II IN ITS FIRST THREE DAYS.

the possibility of attracting new gamers in favor of chasing a safer, established audience.

Yet despite all these hurdles, in December, three major PS2 RPGs scored major hits: SCE's *Rogue Galaxy* (240,000 copies), Namco's *Tales of the Abyss* (400,000 copies), and Square Enix's *Kingdom Hearts II* (1 million copies). What do these three games have in common? Simple: They weren't half-assed. The developers got the time and money they needed to deliver the top-class product that gamers expect, and gamers responded by actually buying the software. Fancy that! Gamers aren't stupid—they can smell a churned-out piece of placeholder product from three miles away. But give them a high-quality, state-of-the-art, nothing-else-like-it game—something they actually want and have a reason to play—and they'll turn out to buy it in droves. Even in beleaguered Japan. | *Andrew Vestal*

MARCH 06

THE MONTH AHEAD FOR YOU AND YOUR PLAYSTATION

SUNDAY MONDAY TUESDAY WEDNESDAY THURSDAY FRIDAY SATURDAY

19

Nevada made it much easier to throw away your money in 1931 when it legalized gambling.

26

Yo-ho-ho! We plan on raising a bottle of rum to saucy lass Keira Knightley, who is 21.

06

If you're in Chicago, raise up your beer steins for Casimir Pulaski Day! If you're not, well, skip the toast. (But you can still raise your steins and drink. Root beer, of course.)

20

The Game Developers Conference begins today in San Francisco.

NEW GAMES

PlayStation 2

07

Read between the lines, jackasses—the next installment in the *Driver* series comes out today.

14

It's Pi Day! It's also the day that we'll say a long-overdue farewell to all those references to offers you can't refuse, etc., as *The Godfather* comes out at last. Or buy *MGSS: Subsistence* and *Onimusha: Dawn of Dreams* instead.

NEW GAMES

NEW GAMES

01

Kingdom Hearts II sold 900,000 copies in its first three days on sale in Japan. Do Americans love the Disney that much? Today's the day we'll find out.

NEW GAMES

02

A day of tall tales: *King Kong* premiered in 1933, and *Wilt Chamberlain* was still so excited about it in 1962 that he went and scored 100 points against the Knicks.

16

VH1 reality show where Flava Flav turns 47 today. What time is it, Flav? Time to get a real job.

30

What is the reason Alex Trebek doesn't have to collect unemployment checks? *Jeopardy* debuts in 1964.

17

In the future, St. Patrick's Day will be celebrated by shaving one's head, as anyone who goes to see *V for Vendetta* will be able to attest.

24

Plan a surprise party—your PSP turns 1 year old.

31

I see London, I see France, I see Sharon Stone without any underpants in *Basic Instinct 2*.

NEW FLICKS

18

It's National Biodiesel Day! Buy a gallon of Willie Nelson's own personal brand of biodiesel, BioWillie, to celebrate!

25

It's the start of the regional championships for March Madness. Simulate the tournament on your PS2 and then place bets based on the results.

Evil isn't taking a break.

DRAGON BALL Z SHIN BUDOKAI

Play DBZ™ wirelessly on the PSP® (PlayStation® Portable) system.

Daxter

An ottsel odyssey

PUB SCEA DELI Ready at Dawn RELEASE March

DREAM A LITTLE DREAM

What is a modern comedy game without a parody level of every nerd's favorite trendy sci-fi action movie? So of course *Daxter* will include a dream level that parodies *The Matrix*:

Prince of Persia did it. *Ratchet* did it as well. But it was the *Jak and Daxter* series that kicked off the recent "good guys going bad" trend. In *Jak II*, "Dark Jak" let players go wild, which had its advantages, but many missed the innocent times of the original game. For those players, Ready at Dawn is making *Daxter*, in which players follow Daxter's travels after he escapes from Jak's capture in *Jak II*'s introduction.

But while Daxter's goal in the game is to save Jak, he tends to get distracted. Amongst plenty of platforming levels, the little guy will eliminate bugs as an exterminator, participate in crop-dusting missions, ride around Haven City on a scooter, and dream his way into some of the craziest levels this side of *Psychonauts*. One of these dream levels actually mimics the Helm's Deep scene from *The Lord of the Rings: The Two Towers*—the player controls "Daxter Gimli" and hacks away at enemies who are climbing up the ladders below and trying to overtake the castle. Also, thanks to tricks the developer has learned on *Jak*, the load times won't be lengthy.

Additionally, the bug-battling multiplayer (think *Battle Bots*), stunning visuals, and "interoperability" with *Jak X* on PS2 (where you can unlock the Daxtermobile) have it shaping up to be of the better original titles on the PSP. It's about time we started having these!

BY ANDREW WATSON

After noticing some quality-control trouble when the *Crash Bandi-*

coot franchise left its hands, Naughty Dog is closely overseeing the creation of *Daxter*. In fact, Ready at Dawn was started by one of Naughty Dog's own, Didier Malenfant, an industry veteran who previously worked at Interplay and Shiny. "*Jak II* went gold on Friday, and on Monday morning I was looking for office space for Ready at Dawn," he recalls.

Despite one of his employees referring to *Jak II* as "the game that hates you" (due to some unusually challenging difficulty spikes),

DAXTER WILL DREAM HIS WAY INTO SCIENCE OF THE CRAZIEST LEVELS THIS SIDE OF PSYCHONAUTS.

Malenfant says the reason he left Naughty Dog had nothing to do with *Jak II*; he left for the challenge of trying something new. "It's about wanting to know more about how a game gets made from start to finish," he says, and then adds, laughing, "Of course, the flip side is that I now feel like I know too much."

Interestingly enough, Ready at Dawn employs many staff members with little or no previous game-industry experience, which seems appropriate given that its game stars a sidekick and is being developed for Sony's little-brother console, the PSP. |

IN THE BEGINNING ..

Springtime means new beginnings, and here at OPM Central, we've decided to help in our own way by checking out the beginning areas of these upcoming games. Some hooked us for days, and others were played for just a few minutes. Which ones? Read on to find out...

KINGDOM HEARTS II

IT'S A LONG ROAD TO THE MAGIC KINGDOM WE BRING YOU A BLOW-BY-BLOW ACCOUNT OF THE PROLOGUE TO KINGDOM HEARTS II

Square Enix

Sony

SECRET SORA

Last time we interviewed *Kingdom Hearts II* director Tetsuya Nomura, he was especially cagey. Even a question about how the game begins was met with a sly grin and an "I can't comment on that." Now that we've played it, we can see why he didn't want to spoil the fact that you don't even play as Sora for the first few hours! Sneaky Nomura!

Square Enix loves to keep us guessing—that's the only explanation for the opening hours of *Kingdom Hearts II*. Here we figured we'd jump in and have a jolly stroll through the Magic Kingdom with Sora, Goofy, and Donald. Instead, we spent six days (about four hours in-game) with a kid named Roxas in the Disney-free zone of Twilight Town, picking up after *Kingdom Hearts: Chain of Memories* (2004's GBA sequel).

Sure, it has keyblades and *Final Fantasy* cameos aplenty, but *KH2*'s prelude is hardly what we expected—which is why we're recounting our adventures in Twilight Town for your sake. Be prepared!

handy new evasion abilities during the encounter outside the mansion—pressing the Triangle button at certain points in combat allows him to evade an enemy attack and get in a few free licks.

INITIALLY, ROXAS USES A BIG BLUE NERF BAT FOR FIGHTING, BUT THE TOY TURNS INTO A KEYBLADE.

DAY ONE

Roxas starts his morning by meeting his pals Hayner, Pence, and Olette and coming to terms with the game's control schemes. Handily, Seifer Almay (Squall's rival from *Final Fantasy VIII*) and his cohorts Raijin and Fujin contribute to Roxas' education through some 1-on-1 combat. It's at this point that you can choose your preferred combat style: offensive, defensive, or magical.

Initially, Roxas uses a big blue Nerf bat for fighting, but after chasing a mysterious Heartless-like creature called a Nobody to an abandoned mansion in the woods, the harmless toy weapon turns into a keyblade, which allows Roxas to kick the Nobody's butt (unlike the blue bat, which allowed him to kick *nobody's* butt). Roxas also learns about his

DAY TWO

Our second day with Roxas begins with him and his compadres running around collecting money for train fare. Roxas must perform three different temp jobs: juggling a ball as a street performer, delivering letters via skateboard, or pushing a cart full of luggage up a hill. After hitting his goal, he meets up with his pals at the train station, only to have his Munnies swiped by Axel, a jerk in a black cloak.

DAY THREE

A mysterious girl appears (you might recognize her as Naminé from *Chain of Memories*, but Roxas doesn't) and is soon followed by a whole bunch of Nobodies. Meanwhile, Roxas finds himself in a vast

SORA SORRY

If you want to eat up all sorts of info about *Kingdom Hearts II*, you can check out our sister mag *Electronic Gaming Monthly*. Witness the power of ZD synergy!

space with a stained glass floor...a near-identical setup to Sora's key-blade trial, except that instead of Disney princesses on the floor, there's an image of Sora. At the end of the trial, Roxas encounters a massive Nobody who has devastating attacks that can only be countered with Triangle-button evasion techniques.

DAY FOUR

Roxas and his friends all take part in the Struggle Battle, the obligatory bracket-based brawl sponsored by one Setzer Gabbiani (who is the airborne opera lover from *Final Fantasy VII*). Roxas holds his own, even against *Final Fantasy IX*'s Vivi (who cheats like a little bastard), but Axel interrupts his actions by freezing time and then talking trash.

Roxas eventually wins the fight against Axel and gets back to the business of earning his trophy. But Axel sneaks in later and swipes one of the gems from the trophy. Then he brags about it while hanging out with Ansem—yep, “final boss of *Kingdom Hearts*” Ansem. You heard it here first: Axel is Japanese for “complete jerk.”

DAY FIVE

After realizing his jewel has been swiped, Roxas finds himself in the middle of some strange occurrences, such as being attacked by

his shadow and fighting an awful lot of Vivis at once (all of whom, it should be noted, still cheat like bastards). Plus, he keeps having strange flashbacks to Sora's adventure, and Naminé won't give him the full scoop as to why.

YOU HEARD IT HERE FIRST: AXEL IS JAPANESE FOR “COMPLETE JERK.”

DAY SIX

Things get even weirder for Roxas, and his friends don't even seem to recognize him. On top of that, Axel begins harassing him throughout Twilight Town. Bewildered, Roxas heads to the abandoned mansion in the woods, where he meets Naminé again. But just when she's about to reveal everything, DiZ, the mysterious dude from *Chain of Memories*, snags her and pulls her through a portal, leaving poor Roxas to find his way through the building on his own.

And what does Roxas get for his trouble? Yet another fight with Axel. On the plus side, he gets to use some totally bitchin' dual-wielded keyblades. Oh, and he finally finds out what his mysterious connection to Sora is. At which point the game begins properly....

Konami Kojima Productions Spring

THE GOBBLES,
THEY DO SOMETHING!

0000

Is it time put the "Solid Eye" 3D glasses on the PSP yet? Wait, the game just said to not use them until it specifically says to. So not yet.

0002

First, a tutorial mission that looks like a trippier version of a typical level from *Metal Gear Solid: VR Missions*. Instead of utilizing virtual-reality-style wireframes and cold colors, this tutorial has a bizarre color scheme.

0006

After finishing these decent tutorials, the story begins. Snake is grabbed by an FBI agent and told to break into a defense contractor to find a certain file. The mission starts.

0007

Oh, now is the time you can go to the menu and turn on the Solid Eye mode!

0008

Whoa, it actually works! The card menu seems to float in midair, and things like boxes and lampposts seem to stick out toward me. Card effects, like the Fury's (*MGS3*), are also in 3D.

0015

Finishing the first mission unlocks the "Solid Eye Theater." A couple of *MGS3* cut-scenes are already unlocked, along with some surprises. Like a movie called "Survival Knife" that has a girl fondling a gun! Oh, Shinta Nojiri, you weren't kidding about putting 3D girls in your game.

METAL GEAR ACID

EXIT
LET'S ROCK

PSP

PUBLISHED BY Ubisoft DEVEL. BY Taito RELEASE DATE February

Notes found in the 8th floor men's restroom at the OPM offices:

10:15 AM

First impressions are good. Nice art direction: colorful (someone likes orange) with fun, hip energy and cel shading. The character design is charmingly cartoony, and the main character: Mr. Esc.

10:30 AM

All missions begin with "Let's rock!"—cute. Main objective: Get Mr. Esc from point A to point B by jumping across gaps in the floor, climbing down ropes and ladders, and picking up items (like fire extinguishers) to put out flames and such. Lots of other obstacles.

10:45 AM

Further in, the stages get more complicated but not more difficult. Mr. Esc has to save people, but they can be used to help him multitask through tricky areas. Fat adults push heavy objects (safes mainly), kids crawl through small spaces, and thin adults put out fires and perform other functions while Mr. Esc focuses his attention elsewhere.

11:00 AM

Missions get more elaborate, tough even. First 20 or so were in an office building—other locales include a subway, a factory, and a hospital. Further highlights: fun, addictiveness, and humor (rescued victim: "I have to take a shower"), plus autosaves. Nicely done.

ONIMUSHA

DAWN OF DREAMS PlayStation 2 Capcom Game Boy Advance Capcom Wii Capcom Release March
 WAKE UP, CUZ IT'S TIME TO TEAM UP!

00.01
 You start as Soki, "The Oni of the Ash" or "The Blue Demon." Time to fight some demons! Stuff like "Hit Square to attack" and "Use Triangle for magic attacks" is being taught here. Oh, don't forget: Use X to absorb souls (which replenish health and mana or can be saved for weapon upgrades).

00.01
 Soki meets Jubei Yagyu, a sassy ninja girl; they decide to have an uneasy cease-fire as they both zip around and fight enemies. You can heal her, but you can't control her yet.

00.02
 Ooh, now a boss fight with a humongous samurai. Run back and forth on the rooftop until he tries to smash Soki, and then swing Soki's mighty demon-slaying blade onto his hands. Occasionally, he'll spew fire. Whatever, dude.

00.02
 Jubei and Soki go on a basic key hunt, and after then use the keys on a big, scary door and get thrown into a boss battle! The boss is a big fish thing with legs who vomits out demons! lol. No real strategy is needed besides "dodge and use magic attacks." It's not much harder than the occasional "test of valor" (a timed action challenge to earn weapons and souls).

00.03
 After some bizarre cut-scenes, Soki talks to Minokuchi, who seems to be some kid who hangs upside down from the ceiling. You're destroying cherry trees and demons for some reason, but Soki can upgrade his sword and armor with the souls he's absorbed.

00.20
 On the next mission, you start out as Jubei, but soon both Jubei and Soki are onscreen. And now, you can use the D-pad to issue basic commands to the AI partner and the L2 button to switch between the two characters. Nice! We'll hold off on playing the multicharacter action extensively until the review.

DRAKENGARD 2 FLYING DYNASTY WARRIORS

by Ubisoft Taito Release February

00.01
Drakengard 2's opening cut-scene explains how this game takes place after the zany incestuous events of the previous game, but with different people. You start off as a junior dragon knight named Nowe and—yay!—get to play through a typical tutorial! First Nowe runs around the room hitting things, then fights an actual person to pass the tutorial.

00.05
 Now that the on-foot tutorial is finished, Nowe moves on to the one explaining the second major gameplay type: dragon flight. The dragon feels a bit like *Panzer Dragoon*!; while flying, you sweep the aiming reticule across multiple objects while holding down the Square button to lock on to them, and then release it to fire off some, er, dragon fire.

00.07
 After practicing against some floating boxes,

it's time to get into an actual mission. This time, Nowe is clearing out the enemy to help some friendly troops. You're also told about using L2 to hover in place. When it's time to hop off the dragon, hit Select and it's back to some *Dynasty Warriors*-style action on the ground. Judicious use of the Square and Triangle buttons results in snazzy-looking and powerful combo attacks.

00.13
 Oh ho-ho, now by hitting R2, you can switch weapons on the weapon wheel (also from the previous game), and on top of that, switching weapons also switches characters. For now, you can switch between sword-swinging Nowe or spear-thrusting Eris. Eris has a weapon better suited for fighting weird monster dudes in narrow hallways, while Nowe's is fun to just swing around in the open field. After cutting through some more baddies and hopping on the dragon, the mission's over.

AT LEAST WHEN YOU DIE NOW, YOU WON'T DIE ALONE.

METAL GEAR GOES MULTIPLAYER.

Solid Snake just added a new weapon to his arsenal: the net. Introducing Metal Gear Solid 3: Subsistence with unprecedented online play. There are multiple players and online modes, a controllable third-person camera, a Secret Theater mode and four complete games in one: multiplayer online, an enhanced Metal Gear Solid 3: Snake Eater, and the original Metal Gear and Metal Gear 2.

TOMB RAIDER

April

Crystal Dynamics

Edios

LEGEND

THE LEGEND

Lara is getting quite a makeover for this new one. No more blue shirt and shorts—now she's gone all UPS brown on us. Plus, while she is still a bit too idealized, she is, admittedly, more realistic and less chestacular than in previous games. Also, if you remember way back on page 30, there's a zany rumor of triple-globed Rachel Weisz voicing her.

0000

This is the first chance we've had to sit down with *Tomb Raider: Legend* with a controller in hand, and to be honest, we're nervous. There's no denying that Lara's looking fine these days, but has she really changed? Or will she break our hearts again?

0001

Hmm, the opening cut-scene is some sort of flashback in which a young Lara is on a plane ride with her mom. But the scene isn't complete yet, and we're really interested in how Lara plays, so we skip it!

0002

The level opens in some mountains, with Lara standing on a ledge. So far, so good. Move the left analog stick tentatively, and amazingly, Lara responds in a timely manner. This is so encouraging that we get more adventurous. Soon, Lara nimbly runs and jumps along the rocks. Just one moment later, we discover that she's just as nimble when accidentally jumping off the ledge. Fortunately, a recovery option is built in, à la *God of War's*—hit X quickly enough and Lara manages to avoid falling to her death.

0003

Diving into a pool of water takes us to the entrance of the first cave. While underwater, we come across the first relic. They can be collected, presumably to unlock extra features, items, art, or what-have-you.

0007

Time for Pole Swinging 101 (the *Prince of Persia* kind, not the *Show-girls* kind). And yep...sure enough, Lara can swing with the best of them, agilely spinning her way around the cave. Lara and the Prince copy each other so much that they must be destined to be together. Maybe Ubisoft and Eidos can set them up someday....

0010

Out of the cave and into a ravine. Lara has her first contact with one of

MOVE THE ANALOG STICK TENTATIVELY, AND AMAZINGLY, LARA RESPONDS IN A TIMELY MANNER.

the bad guys, who is, of course, also after the contents of this tomb. He's easily handled, however, by Lara's trusty triggers: L1 to lock on, R1 to shoot. Wham, bam, thank you, ma'am.

0015

Into a new tomb (or perhaps back into another part of the last one—it's kind of hard to tell without a map option because we have horrible directional sense). In any case, it's time for the first puzzle. This one is pretty basic—get the three stone blocks into place to open up the door at the end of the passage. In this instance, it's a matter of getting two of

TWIN PEEKS

We got to spend time with both the PSP and PS2 versions of the new *Tomb Raider: Legend*, and other than the PSP version's widescreen viewing ratio, not much is different. In fact, the only change we noticed immediately is that the PSP game affords you no control over the camera thanks to the PSP's lack of a right analog stick. Also, some puzzles might be simplified a tiny bit—in the block-on-trigger-spot section, the PSP version had only two stone blocks to place (as opposed to the PS2 version's three). Other than that, the two games are exactly the same. Which is pretty cool, since the game already looks snazzy on the PS2.

the blocks up to a second level. Thanks, however, to the popular lever-as-catapult gaming mechanism, it's a snap.

0017

After the requisite puzzle, it's time for the requisite obstacle course. Slamming walls of rock are no match for Lara and her trusty block.

0020

Baxter! This cat, however, is not a very nice one. Somehow cheetahs got into this tomb and are still roaming around, looking to take a nice chomp out of Lara's shapely legs. There might be more than one way to skin a cat, but the most efficient is definitely the Desert Eagle way.

0022

Lara gets past the puzzles, blocks, and cats, and through a doorway into a long passageway. Anyone who has any experience with videogames knows that innocent-looking passageways are always the most treacherous. And sure enough, the second Lara steps beyond the doors, they slam shut and a cut-scene begins in which the floor starts to crumble away from under Lara's feet. In the *Dragon's Lair/RE4/God*

of War tradition, Lara manages to succeed in her scramble to safety as long as we hit the buttons that pop up on the screen quickly enough.

0023

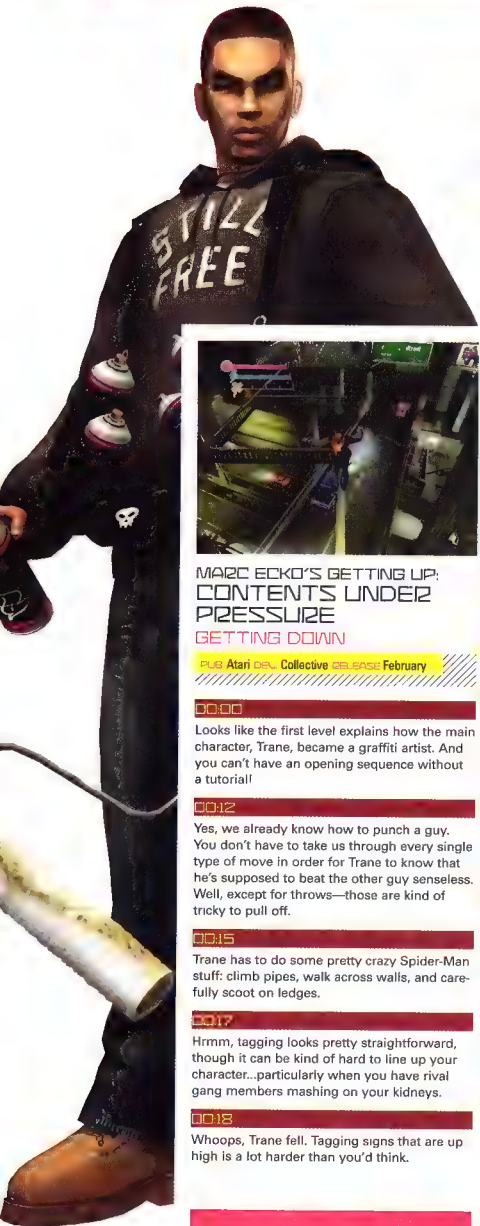

Let there be light! The passage leads out to a ledge in the sun. And the sun is quickly blocked by a helicopter that's swooping down and shoot-

LARA DASHES ACROSS A RICKETY BRIDGE JUST IN TIME TO GRAB THE OTHER SIDE.

ing away. Lara dashes across a rickety bridge, making it just in time to grab the other side before the chopper's guns demolish the bridge.

0025

Where there are choppers, there are other bad dudes with guns. After a brisk gun battle, Lara dispatches them, and lo and behold, a fancy-looking medallion is on the ground, with a lever in the center just begging to be pulled. One pull later, and our trip is over.

**MARC ECKO'S GETTING UP:
CONTENTS UNDER
PRESSURE**

GETTING DOWN

Play Atari **Def. Collective** Release **February**

00:00

Looks like the first level explains how the main character, Trane, became a graffiti artist. And you can't have an opening sequence without a tutorial!

00:12

Yes, we already know how to punch a guy. You don't have to take us through every single type of move in order for Trane to know that he's supposed to beat the other guy senseless. Well, except for throws—those are kind of tricky to pull off.

00:15

Trane has to do some pretty crazy Spider-Man stuff: climb pipes, walk across walls, and carefully scoot on ledges.

00:17

Hrrm, tagging looks pretty straightforward, though it can be kind of hard to line up your character...particularly when you have rival gang members mashing on your kidneys.

00:18

Whoops, Trane fell. Tagging signs that are up high is a lot harder than you'd think.

**SONIC RIDERS
TO THE EXTREME**

Play Sega **Dev. Sonic Team** Release **February**

00:01

We're surprised it took Sega so long to do a futuristic hoverboard game featuring Sonic, because, quite frankly, it doesn't get more extreme than that unless Sonic is also drinking Mountain Dew.

00:02

OK, time to select one of several furry characters. Who the hell are these other guys? Ah, forget it; let's just go with good ol' Sonic.

00:03

Off we go. The start of the race reminds us of *SSX*—from the future! OK, Sonic is moving forward at very high speeds and it's kind of hard to tell what's going on or exactly what he's supposed to be doing.

00:10

Apparently, Sonic can do tricks while airborne, but you have to land them or face a tumble. Doesn't seem like there's a whole lot to this, but the track design might keep it interesting.

00:12

Hmmmmmm....anyone up for happy hour?

**SYPHON FILTER:
DARK MIRROR**

GABE'S 15 MINUTES OF FAME

Play Sony CEA **Dev. Sony CEA** Release **March**

00:00

The scene is Kemsynth Petroleum, a refinery along the Alaskan pipeline. Lian Xing and Gabe Logan attempt a stealth insertion but find the refinery at high alert, swarming with guards.

00:04

As you take control of Gabe, you find that the game handles like a proper third-person shooter, with the analog stick controlling movement and the face buttons controlling aiming. The *Syphon Filter* lock-on system is also fully present.

00:07

After taking out a few guards, Gabe has to protect Lian as she moves in to hack a communication tower. Things get really tough really quickly—but the generous checkpoint system is used well.

00:12

A quickie miniboss battle with Red Jack lets Gabe try out some of his new gadgets. Best of the bunch: exploding darts. Enemies don't even feel them until Gabe triggers the explosion.

00:15

Boom.

THE GODFATHER

REFUSE THIS

0000

After seeing his father gunned down in an alley, Giancarlo "GC" Varanini has turned to a life of petty crime. But at the request of his mother, Serafina (this happens during the wedding scene from the film's beginning), Don Corleone intercedes to bring Giancarlo into the Corleone family business and sends Luca Brasi to locate him.

0005

Brasi finally locates GC, just in time to save GC from a vicious beating—or worse—at the hands of his erstwhile business associates. Brasi shows him the ropes, demonstrating *The Godfather's* complex, somewhat odd combat system.

0009

After GC gives the young toughs the business, Brasi instructs him to have a little chat with the local butcher—with an overdue protection payment. In order to convince the butcher to do the right thing, it becomes necessary for GC to do a little redecorating. After the accidental breakage of one cash register and two meat cases, the butcher agrees to GC's polite request.

AFTER GIANCARLO BUES THE YOUNG TOUGHS THE BUSINESS...

0014

Turns out the butcher's got a little money coming in on the side from the casino upstairs. GC convinces the pit boss that he's got a new boss—choking can be persuasive.

0018

On the way out, GC runs into Officer Friendly, who suggests that a small donation to the Fraternal Order of Police would not be unwelcome. In fact, such a donation can help keep crime down in the neighborhood...or at least unnoticed for a while.

0023

Later, Brasi invites GC along on his meeting with the Sollozzo family—Brasi has been instructed by the don to infiltrate the Sollozzo. Alas, they murder Brasi, just like in the movie. Except in the game, GC witnesses the assassination through a window. He busts in to seek revenge, but it's too late.

0030

In a panic, GC hunts down Marty "Monk" Malone...just in time to see Monk brutally shot in a barber shop—along with the don himself (and the useless Fredo Corleone).

Now the ball is really in the Corleone's court. How will they react to the news of their son's actions? Will they be angry? Will they be proud? Will they be...well, you know.

EA EA Reewood LEASE Spring

THE TWO ALS

While most of the major actors are in the game, there is a distinct lack of our favorite fellow who uses the "yells a lot" acting technique: Al Pacino. Sure, there's a Michael Corleone in the game, but he has the barest resemblance to good ol' Al (just enough to recognize him). Apparently, Al doesn't believe in games, as he's not in *Scarface*, either.

GET YOUR MOB FACE ON

How is it that our own Giancarlo has gotten so wrapped up in a life of crime? Through the magic of *The Godfather's* "mob face" system, which puts a mafioso spin on the unbelievably in-depth character-creation tool first seen in EA Sports' *Tiger Woods* games.

THE VIAN:

LESS BLOOD ■ MORE MONEY

Plus Eidos' new 10 Ent. releases Spring

Agent 47 is bald, back, and better than ever. For one thing, the game now has pop-up windows that let you see events that give you clues as to what your next task is, instead of displaying a sentence that explains the objective. It's a cool-looking tactic, giving the game a 24-like vibe.

You can still choose to play the game however you prefer, but there are even more bonuses if you play sneakily and leave as few bodies as possible, and enhanced gameplay features will make that easier to achieve. One option is to use the improved techniques to make your murders look accidental. In one level set in a rehab clinic, 47 can rig a resident's hot plate so that it explodes and kills the target when he stirs his pasta sauce. Another target asks you to spot him while he's bench-pressing, helpfully setting you up to drop the barbell on his throat and leave him looking like the victim of his own weak biceps. Sometimes, 47 can walk up behind an unsuspecting victim who is stargazing and casually push him over a railing.

RIG A HOT PLATE TO EXPLODE AND KILL THE TARGET WHILE HE'S STIRRING HIS PASTA SAUCE.

The game will also have more receptacles around for you to stash bodies in, meaning you'll be doing a bit less dragging of bodies to closets or empty rooms. We were able to dump a nosy jogger down a convenient manhole, and the clown we anesthetized fit very nicely in the back of his crazy clown van.

You might like to take people on with your guns blazing, but you'll get less money. The skillfulness of your performance dictates how much you make. Become too notorious, and you'll end up spending your reward money on new identities instead of new guns. |

HEAL THYSELF WITH RAGE

If you get caught in a gunfight and find yourself low on health, don't worry. Sharpshooters will still have a chance to escape with their life. Anyone who, at the point of death, can pull off three successful head shots in a row will recover some health points.

X3

THE POWER OF 3

PUB: Activision DEV: Z-Axis RELEASE: Spring

NOT TO BE CONFUSED WITH

X3: Reunion, a space simulation game that came out for the PC last November. Made by European developer Egosoft, it is a sequel to *X2: The Threat* and is set in the *X* universe, which is being threatened by an alien race.

Fans of the *X-Men* series are in a tizzy about reported changes that director Brett Ratner made to *X3* after original director Bryan Singer's departure, and a recent fun trailer has only increased the questions. Do Professor X and Cyclops really die? Which mutants will be "cured"? How big of a role does Jean Grey/Phoenix have? And why is the Golden Gate Bridge falling to pieces? Well, don't look to the *X3* game to answer any of those questions for you. Rather than paralleling the movie's plot, this game—which features three playable characters, will actually bridge the time period between the *X2* and *X3* films.

NIGHTCRAWLER

In the level we saw, Nightcrawler is in an industrial reactor-type area. Working with Colossus (who will have a larger role in the third film), he uses his teleportation skill to get past the enemies. Every character's basic abilities will be available from the beginning of the game, although the development team is working on mutant evolutions, which allow you to power up these skills. While you can use Nightcrawler to do occasional melee fighting, he's a lot more effective if you use his ability to "BAMF" ("teleport" for you non-X-Men nerds out there) from side to side, confusing enemies long enough to get in some good hits before "BAMFing" again to another area. By the end of the game, you'll also learn why Nightcrawler is not present in the third film.

WOLVERINE

As expected, Wolverine is, well, the best at what he does: using brute strength to defeat challengers. Environments will be tailored to play to each character's strengths; in Wolverine's case, this means you'll be dealing with groups of enemies in fairly wide-open environments, like the feudal Japanese temple courtyard we saw. Though his character doesn't have any sexy cool moves, he will have a rage meter that fills up as he fights. Once it tops off, he can go into Fury mode, which allows him to kick extreme ass instead of just regular ass.

THE GAME WILL BRIDGE THE TIME PERIOD BETWEEN THE *X2* AND *X3* FILMS.

ICEMAN

Remember how Iceman zipped around on his ice sled in *Spider-Man and His Amazing Friends*? Well, now that he's playable in *X3*, you can slip 'n' slide all you want. The developers modeled Iceman after Tony Hawk—his sled resembles a skateboard/snowboard hybrid, and you'll use it to weave around the large, open levels. Iceman will also have a special attack known as the plow, which works how you might think: It puts a big ice shield in front of him that can slam into opponents. |

DO NOT TRY THIS AT HOME.

To those parties attempting to recreate the stunts contained in the new MX vs. ATV: On The Edge we offer this message: DON'T. While that seems fairly obvious to most, you'd be surprised how many people will contemplate emulating its dangerous intensity, vis-à-vis the realistic head-to-head racing experience. Ergo, THQ and Rainbow Studios put forth the following caveats to all parties: Do not attempt to make a golf cart do 70 mph, nor launch a sand rail over a moving plane. Moreover, do not undertake the recreation of any and all stunts from MX vs. ATV: On The Edge in order to replicate its realistic rag-doll physics. The insane stunts and fierce racing is intended for the sole intent and purpose of an intense gaming experience, not for the discovery of clever ways to inflict bodily harm. Case in point, THQ and Rainbow Studios offer this photo as reference of the projected outcome of ignoring this warning. Honestly, what was this guy thinking? Said driver wasn't anywhere close to successfully completing the jump, nor is the other side of the canyon he was attempting to reach even in the aforementioned photo. In summation, MX vs. ATV: On The Edge is not real, don't attempt to make it real.

Choose any vehicle and
unleash it in 4 player
Wireless Ad-Hoc.

METAL GEAR SOLID

Pub Konami Dev Kojima Productions Release March

PERSISTENCE

Just another month to go before we can experience this packed rerelease of one of the best games in the PS2 library. We've covered the single-player camera changes pretty extensively, and Kojima Productions is too busy finishing the game for us Americans to show us more of the extra stuff. So to tide you over, here's a neat shot of Snake doing what he does best: being sneaky. Also, try to figure out what new camouflage he's wearing!

WTF?

Kojima is full of wackiness and humor, as evidenced by this bizarre alteration to a key cut-scene.

THE PSP'S NEXT
GREAT PUZZLER

RATING KEY

No more blargs, octagons, or whatever you've called them—now we're sticking with straight-up numbers. And any game that receives five of 'em is something truly special that deserves a spot in your collection. On the other hand, a 2.5 is merely mediocre. And a 0.5? Well...at least they're fun to rip apart.

BLACK

MONEY SHOT

1 PUBL. EA DEVL. Criterion ESRB E MSRP \$39.99

If you asked me to describe the one thing I learned after playing *Black*, it's not that guns are loud, or that rocket-propelled grenades (RPGs) sound scary, or that an M249 can unload its person-tearing load of 160 5.56-by-45mm bullets in less than 20 seconds. I already knew that stuff.

What I didn't know is just how freakin' cool it is to use a shotgun to blow open a door. I'm quite tempted to purchase one as my new "skeleton key," and I'm of the mind to now dock any future game that does *not* let me use a shotgun to knock a door down.

This simple "shotgun equals great door opener"

formula is only a small example of *Black's* loving portrayal of guns. The front-end menu is simply a montage of firing guns and shell casings being ejected from said guns. When you reload your gun during the game, your character is so focused on just the weapon that the rest of the screen undergoes a weird blur effect, which is actually quite disorienting at first. There is a minimal story that involves traitors, terrorists, and black-ops missions in Eastern Europe, but you'll quickly forget names and faces—yet you'll always remember the look, sound, and feel of a G36C or an AK-47 or a Magnum.

THE THUNDER OF HIS GUNS

For the longest time, home-theater geeks would use the Omaha Beach scene in *Saving Private Ryan* both as a test of a home theater's visual and sound quality, and as a demonstration of said theater's supposed awesomeness. The chaotic cinematography is a good diagnostic for how cool the TV looks, and paying attention to the snap-whiz-crackle-pop-thud sounds of the various guns and bodies going from the left-front speaker to the back right of the setup is a great way to find out if your speakers were worth the two grand.

In that vein, *Black* is pretty much the best videogame for testing and showing off your home theater. The whole game contains numerous set pieces filled with the most sound and fury a game can muster from the PS2. The visual presentation is top-notch; your bullets don't simply enter guys and damage them—they bounce off walls, they cause sparks that resemble miniature fireworks when they strike metallic surfaces, and they kick up all sorts of debris depending on what they hit. Unloading an assault rifle into a small room quickly generates enough dust as to require you to cease fire for a moment just to let the air clear. A particularly harrowing sequence in a minefield fills the screen with fire, dirt, grime, and flying bodies. Hitting a guy up high in a building with an RPG results in a minor shockwave that shatters most of the windows around him, usually causing large chunks of the building to fall down as a result. There is no such thing as a small explosion, as each one tends to fill your screen with so much fire and thunder

and fury that it feels downright biblical (to be precise, like a modern reinterpretation of the Old Testament). The RPG is followed by a smoke contrail that rivals the smoke effects in *Call of Duty 2* on the Xbox 360. Additionally, among the various missions, one takes place in collapsible, debris-filled environments, another in a large forest at night, and yet another in a moody insane asylum—and all are filled with impressive effects. *Black* is the first game since *Metal Gear Solid 3* that nearly makes "next-generation" graphics irrelevant.

EXPLOSIONS FILL THE SCREEN WITH SO MUCH FIRE AND THUNDER AND FURY AS TO FEEL BIBLICAL

SNAP CRACKLE POP BANG DEAD

As great as the visuals are, particular kudos should go to the game's audio team, as *Black* has quite possibly the best sound design of any shooter to date. Most gamemakers seem to forget that the PS2 can do Dolby Pro Logic II (a method of generating 5.1 surround sound), and those that do remember tend to just put random noise in the rear speakers. *Black* uses the other speakers to indicate positions of bodies, grenades, and bullets whizzing from place to place. Playing *Black* with normal TV stereo versus a proper home-theater setup offers a

NICE RACK

While *Black* includes a whole lot of guns waiting to be picked up and squeezed, here are six that both the development team and Team OPM particularly liked.

MOST POPULAR

Due to its legendary reliability and ruggedness (it never jams and it's easy to clean) and its low manufacturing cost, the AK-47 is basically the most oft-used gun in the world. It's also really easy to train with, compared to other, more recent guns. You'll never run out of AK ammo in the game.

COMPACT URBAN

This is a popular street gun because it's so small. However, it also spits out bullets really, really, really fast. For example, if you catch yourself standing right next to a dude looking to deliver the bullet business to you, you can unload a whole mag from the MAC-10 to stop him.

LUCKY FEELING

The Magnum is rare (our initial playthrough only uncovered three in the whole game), but man alive, it packs a wallop. It can take out most enemies with a single hit, but it has a very narrow cone of damage, meaning you pretty much have to aim dead center and hope your target doesn't move out of the way.

COMMANDO'S CHOICE

The MP5, designed by Heckler & Koch in Germany, is perhaps the most popular submachine gun in the special-forces community. The West German police and border guard used it, and their special forces, the GSG-9, introduced it to their special-forces buddies. It's also had many starring roles in movies.

SKY STREAKER

You know that scary sound that resembles a combination of a whizzing and a streaking noise? The RPG tears through the air so fast that it generates a vacuum behind it, and that crazy noise is the sound of the surrounding air rushing in to fill the vacuum.

ISRAELI MIGHT

Probably the most identifiable submachine gun in pop culture (the MAC-10 is often mistaken for the Uzi by people who don't know guns), the Uzi is a good, solid, compact little bullet-spewing gun. The *Black* team cites *The Terminator* as the major influence for putting the Uzi into the game.

OPM: You've talked about how you wanted to make *Black* a very accessible game—more accessible than the standard FPS. What's the thinking behind that?

AW: Our feeling now is that the big sin most developers make is making the game too damn hard. As hardcore gamers, we all know about this genre, but the FPS has not reached out into the mainstream. But we believe that if you've paid your money, we want you to complete our software. You want as many people as possible to play your game. There's a lot of great stuff in FPSs, and the majority of players don't get to see it.

We play a lot of games, we own lots of different systems, and we devote a large amount of our time to playing games. What we have to accept as the market gets bigger and the audience gets larger is that not everyone does that. My brother-in-law played through *Medal of Honor: Rising Sun*, and I said to him, "Yeah, I kind of thought it was too short." And he said, "What? I thought the game was too long! I spent six hours [on it]!" To him that was a big thing.

Absolutely, it would be great for *Black* to reach out to a bigger audience than before. But that's a really tough thing to say, because in saying that, I know there are hardcore players who'll say, "Right, I'm not buying that game, then. Because it's made for newbies! And I amers! And it's all easy!" What we want is for this game to be a fun shooting game—shooting and explosions. It's visceral and exciting and it should be enjoyed by everybody. We all enjoy action movies; that's why we made this game, to celebrate our love of action movies.

GRANDIA®

Heroes come together
as their world is torn apart.

Your historic flight to the mainland is interrupted by the appearance of a beautiful communicator on the run. She is the only one who can speak to the guardians of this world and only you can help her. Devastating combo attacks, powerful allies, and an arsenal of deadly weapons and magic are at your command, but will they be enough in a battle between gods?

PlayStation 2

LET'S GO TO THE MOVIES

If imitation is the sincerest form of flattery, then a lot of directors and actors and producers should feel flattered right now. Below are the movies that influenced the design of *Black's* levels.

LEVEL 1: CITY STREETS

LEVEL 2: WILDERNESS

LEVEL 3: GRAVEYARD/TOMB

PART 1: Based on a clip from the HBO documentary
PART 2: *Black Hawk Down*

LEVEL 4: STEELWORKS

LEVEL 5: ASYLUM

Blade Runner, The Matrix, The Rock

LEVEL 6: DOCKS

LEVEL 7: CITY BRIDGE

LEVEL 8: DOLLARS

significant enough difference to almost make me proclaim that you need a surround-sound setup to enjoy the game. While the distinct sound of an RPG streaking its way through the air is pretty cool, it's positively bladder-bursting when the sound tears from one speaker to another as you see the shot fly by. Regular gunfire is crisp and loud, and the aforementioned explosions will give your subwoofer a workout.

In fact, the amazing combination of sight and sound makes *Black* one of the most cinematic games on the market. Despite it having a nearly inconsequential and terse story line, the audiovisual experience is something that begs to be witnessed. Just as how Criterion tapped into the part of our brain that causes us to rubbeek at car accidents with its *Burnout* franchise, so has it managed to tap into whatever gland tells our brain, "Movie-style gunfights are fun to watch." Again, *Black* is an apt test for a cool gaming setup simply because it catches the eyes and ears of anyone walking by. Everyone at the *OPM* office ended up being entranced for a few minutes of watching me destroy most everything.

A lot has been written about *Black's* presentation and production values, and that's simply because it currently has no peer on the PS2. When it comes to the actual game, it's almost painful to notice some of the things that could have been tuned a bit better. Granted, it has quite a few awesome little tweaks and gameplay features that help make the overall experience very cool. The two-weapon limit forces you to be a bit tactical in deciding which guns to keep. The ability to

destroy most cover (not everything is destructible, but in general, the things you expect to blow up do so in appropriate fire-and-brimstone fashion) adds a fair bit of tension to a firefight, and despite the game's excessive balls-to-the-wall presentation, it's actually better to be slower and more thoughtful in your approach rather than employ a straight-up run-n-gun method.

RUN N' GUN

Starting off, the AI feels pretty good, but it could have used another level of polish, and it doesn't change much between difficulty levels.

THE SIGHTS AND SOUNDS MAKE BLACK ONE OF THE MOST CINEMATIC GAMES ON THE MARKET...

While enemies will both use cover and try to destroy your cover, not to mention coordinate their attacks, they still fall victim to some old tricks—you can shoot them from afar with an AK-47, and they won't really react to you. The occasional friendly AI is barely serviceable—it's a bit of a miracle when your AI buddies kill someone (then again, that might be on purpose). Also, it's a bit annoying to see how much damage a baddie can soak up before dying—especially shotgun-toting enemies, who basically can still walk and shoot despite getting nearly a full magazine of ammo unloaded into their faces. And while I don't

ALEX WARD ON MULTIPLAYER

OPM Why aren't you doing multiplayer in *Black*?

AW Well, where do we start? It's a bit like, "Where's your PC version?"

OPM Multiplayer is one of those things that is somewhat expected in an FPS.

AW Expected by who? Multiplayer has evolved so much. Multiplayer is either *Mario Kart* or *GoldenEye* on the N64, PC over a LAN, two-player splitscreen... Could we have done some kind of splitscreen? Yeah. But how many people want to do it? I like to play full screen. I always thought we'd want to do something special and unique with it. We're innovating here in terms of action, in terms of what the guns can do, in terms of how you interact with the world. We wouldn't want to tackle multiplayer online gaming until we had spent a lot of time working out something unique to do.

I'm not interested in deathmatch; a lot of members of my team aren't [either]. I guess if we did anything we'd try to do something more elegant. Some PC paradigms have dominated the industry for a long time; sometimes they've done a network experience and no single player. We wanted to focus completely on making a solid single-player game. We've seen other developers do a

HOME ON THE RANGE

SHOOTING UP WITH ALEX WARD

Even with the neon-lit excesses of Vegas all around, an excursion to the legendary Gun Store with Alex Ward had no problem standing out. He chaperoned a group of journalists to the source of his inspiration for *Black* much like Willy Wonka would lead a trip to Baskin-Robbins. Inside, we gazed into cases filled with a different sort of 31 flavors. Handguns, assault rifles, submachine guns, and shotguns waited for us to tell the nice man behind the counter, "I'll take that one."

No sooner had I gotten those words out than I was whisked away to don my ear and eye protection and enter the range. Before I knew it, I stood there, alone in my lane, isolated in the silence of the headphones with a Ruger .45 in hand as I stared down the range. As I started to squeeze the trigger, I wondered what exactly was going to happen, and then, without warning, the world exploded and I had my answer.

Copies are never as good as the original, and firing a real gun erases any notion that a videogame could somehow serve as training for it. Not only is it a visceral experience, but each gun has its own distinct personality. Just keeping the AK-47 on target as it violently kicked was a handful. Hunched in a more compact grip, the MP5 was a degree more controllable for me, but it was still plenty eager to jump around. Sighting down the long barrel of an M16, I put the first round accurately on the mark, and then I held on as it lurched up and to the right. And for raw power, nothing quite matched the adrenaline rush of rapid-firing the semiauto SPAS 12-gauge. *I Garnett Lee*

mind the Jack of a jump button, the slow movement speed makes the lack of a sprint function even more prominent.

Interestingly enough, one thing that will annoy hardcore FPS players is something that Criterion fully admits to (see page 79): The game is short. After finishing the game on normal difficulty, my game clock read 6:59—and I'm pretty sure that seven hours includes the time I found a safe room and went into an hour-long staff meeting. On average, I went through a mission on normal difficulty in 20 to 30 minutes, with the last one taking me about an hour to complete (*Black* has eight

ONE THING THAT WILL ANNOY HARDCORE FPS FANS IS SOMETHING CRITERION FULLY ADMITS TO...

missions total). Also, if you actually do pay attention to the story, then the ending of the last mission is a blatant and annoying tease for a follow-up. I wouldn't say it's as bad as *Halo 2*'s abrupt single-player ending, but I will admit that, based on the cut-scene at the end, I was fully expecting another mission or two to follow, only to be surprised by the sight of the end credits. Also, while multiplayer isn't necessarily needed in this game, it's almost painful to think that there isn't any, simply because the prospect of conducting an intense firefight in an abandoned bathroom with live people is not possible.

ONCE YOU GO BLACK...

CAN A NONFAN OF SHOOTERS BE CONVERTED?

When we first heard about *Black*, the developers told us that they wanted this game to be a shooter for everybody, much in the same way that *Burnout* (which was created by the same studio) is a racing game that appeals to a wide cross section of people.

Not being a shooter fan put me in the prime position of being able to evaluate whether they succeeded. So I gamely hoisted up my shotgun (though I'm not sure whether you even *can* holster a shotgun) and dove in. And it was fun. The accessibility made things a lot easier: Even though I'd have a hard time differentiating between an RPG and a pistol in reality, I quickly figured out which weapons worked best where. And the satisfaction of hurling a grenade through a window and then watching the glass shatter all around is pretty amazing.

But the ease of use and the decent pacing don't change the fact that I have absolutely wretched aim, severely handicapping my ability to really immerse myself in any gun-driven game. *Burnout* differed for me because I know how to drive, so those skills are already second nature, and I find driving fast fun. But I've never shot a gun in my life, and while the concept has a sort of novelty appeal, it's not something that I feel compelled to do over and over.

So...*Black* is good, and I like playing it, but it's not something that'll keep me up nights like *Burnout* did. But to be fair, I don't know if there's any shooter that could. | *Dana Jongewaard*

REPEAT MEMBER OF THE GUN CLUB

One thing that gives the game some added replayability is being able to unlock weapons with unlimited ammo—which doesn't make much of a difference for most of the guns, since there is so much ammo. But it does make rare items like the RPG, the M203 grenade launcher, or the Magnum even more satisfying to use. Finishing the game on hard difficulty gives you a slick M16 with grenade attachment (also with unlimited ammo), which just might be the most cathartic weapon in PS2 history.

But that's about it for replayability. Sure, there are multiple difficulty levels, but those mostly change the amount of available health packs—you can store up to three health packs at a time and just press Down on the D-pad to use them, as opposed to the first-aid kits that heal you immediately after you walk over them. Hard difficulty basically means there are no health packs, just first-aid kits, so you can't "save up" your heals. The changes to the AI aren't very drastic—it's not like how *Halo* almost feels like a different game once you change difficulty levels.

PULL THE TRIGGER

Criterion has succeeded in completely immersing the player in intense, cinematic gunplay—no other shooter has captured the pure awesomeness and adrenaline of a suspenseful shoot-out in a game quite like this. It's a bit of a shame that the core game itself is merely solid. The

perfect feel and presentation make the gameplay flaws stand out even more, but on the other hand, those same flaws would have doomed most other games, while *Black* is saved by its most excellent presentation. The paper-thin story and the less-polished gameplay aspects combine with the excessive yet satisfying core action to make *Black* "gun porn" in the truest sense of the phrase. | *Thierry Nguyen*

VERDICT It's gun porn. You want awesome shooting action? Nothing better here. You want more than that? You might be disappointed.

GRANDIA III

THE GRANDDEST BATTLE WITH THE DULLEST STORY

The *Grandia* franchise was dangerously close to jumping the shark once *Grandia Xtreme* was released, but thankfully, *Grandia III* features no hipsters or punks—just lush graphics, numerous dungeons, a unique combat system, and a story to justify all the monster killing—the hallmarks of any RPG.

Unfortunately, while the story starts out pretty spiffily, it soon devolves into a typical happy-teen-on-a-fantasy-romp cliché. Both the box cover and the beginning give off a slick “sky pirates” vibe, with design sensibilities that echo *Tale Spin*, *Last Exile*, and even *Skies of Arcadia*. The story begins with pilot wannabe Yuki performing a test flight on his newest plane and seeing a mysterious girl being chased down below. He and his mom, Miranda (perhaps the best character here and quite possibly the coolest mom in gaming), rescue the girl, Alfina, and then go off on a grand quest. Your gang runs into a cool sailor named Alonso, which helps maintain the whole “sailing and flying” vibe. Then, at a certain point, Miranda and Alonso leave, and the game becomes a pretty cliché “two young kids battle peril across the land” type of adventure. I kid you not; you actually go to a fire temple, a wind temple, and so forth. Once the story became uninteresting, I basically stopped paying attention to anything people said and just watched the cut-scenes because they looked pretty, then got back into more battles. The two things RPG players tend to care about are the story and the fighting, and while the story is pretty mediocre, the combat makes up for it.

The battle system is, in three words, still pretty awesome. It's carried over from previous games, and it adds some nice tweaks without subtracting from the rest of the combat. It's turn based in the sense that you have to wait for your turn to issue commands, but everything actu-

ally happens in real time. Combat strategies include interrupting enemy attacks, using the right spells and skills, setting up air combos (during which one character knocks a baddie into the air and other characters can pull off special attacks for extra damage), and deciding whether or not to listen to a party member's suggestion. The combat system is so interesting that I didn't mind leveling a lot, simply because that meant I was fighting a lot.

THE COMBAT SYSTEM IS SO INTERESTING THAT I DIDN'T MIND LEVELING A LOT.

Grandia III is a game filled with polish, slick visuals, and a fantastic battle system. It just happens to be bogged down by a fairly mediocre story. Those who want to weep during their games will probably end up rolling their eyes instead, but if you ignore the story and focus instead on the lush spectacle of slaying things, you'll no doubt have a grand old time. *Thierry Nguyen*

VERDICT Play it to kill things real prettylike, not for the story.

SCORE

4/5

NO MORE NOB! I'm no marketing dude, but I know that a lot of RPG players are growing up, and the whole “teenage heroes zipping around” type of story is starting to get tiresome. More games should have characters in their 20s or, gasp, their 30s!

SHADOW HEARTS: FROM THE NEW WORLD

ALL THE STUFF YOU DON'T REMEMBER FROM HISTORY 101

Johnny Garland, 16-year-old private detective, steps out onto the streets of 1929 New York with his demon-hunting Native American friend in full tribal regalia, where a pair of traveling gay bikers leers at him before clearing out and allowing him free access to the treasure chest sitting out on the street. By this point in the review, you will probably already know whether *Shadow Hearts: From the New World* is a game for you.

Or maybe not. For while this *Shadow Hearts* game upholds the sheer craziness of the first two games' plots, running rampant across the "real world," its battle system actually seems less refined than those of the previous games, whose Judgement Ring system struck a nice balance between complexity and user-friendliness.

You still rely on precise timing with the Ring for lots of things here, but there's so much else complicating battles that it makes you long for games that just let you hit things. Sometimes you don't want to have to decide whether it's better to use a fusion attack, a normal one, a double attack, a combo with someone else, a double combo, or magic, all while keeping track of the enemies' relative vertical position. The onscreen display in battles tells the story—there's so much information to keep track of that it's hard to tell what all the numbers mean even after sitting through each of the tutorials.

If you can hang with the slightly overcooked

combat, though, there are as many bizarre interpretations of reality as ever, with the added bonus that *From the New World* takes place in America rather than Europe, making the ludicrous twists on real-world history easier to spot. Ninja university professors, Tom Sawyer and Becky Thatcher as children in danger, and a kinder, gentler Al Capone are all part of the game's weird charm.

After low sales killed Midway's interest in the series, it was unknown if *Shadow Hearts* would continue in the U.S.—but XSeed has picked up the torch, and, on balance, it's clear that the company has made a good move. **1** *Nich Maragos*

WINNING ELEVEN 9
THE ANTI-FIFA RETURNS, SCRAPPY AS EVER

1 PUBL Konami DEV. Konami ES28 E MSRP \$49.99

If you were to summarize the edge that *Winning Eleven* has over *FIFA* in a single word, that word would have to be "control." Whereas EA Sports' soccer game has pretty much always suffered from an uneasy sense of detachment, Konami's has always focused on letting you place the ball exactly where you need it. *WE9* is no different, and it goes some way toward improving on last year's game by doing something quite unusual: It has slowed things down. While this may seem like a reprehensible idea at first, in practice it allows you to focus far more on what each individual is doing, and coupled with the remapped controls, it gives you a greater sense of being able to completely direct what your players do.

As in the real thing, games are now won or lost in the midfield, and your dominance there is of paramount importance. By taking a completely different approach to your interaction with your players than *FIFA*, *WE9* provides a much more intimate experience as you place the ball exactly where you need it. Fakes, dummies, flicks, feints, and control moves both on the ground and in the air are now executed with a combination of face-button presses that are incredibly intuitive. Although the manual's six pages of button combos are initially as intimidating as a particularly complicated fighting game's, they soon become second nature. Worthy of particular note are the new controlled moves that you execute more accurately by using the R2 button. Hold it while shooting, for example, and your attacker will be sure to use the inside of his boot as the shot gauge builds and you unleash at the goal.

Although veterans of the series will have to relearn the game a little, *WE9* proves yet again that it's not necessarily the glitz, glamour, and associated licenses of a sport that make the videogame version of it superb. Kudos to Konami for also including a Spanish-language version with the U.S. release. **J** John Davison

VERDICT Konami has expanded on the realism and sense of control that has become the foundation of the franchise.

SCORE **4.5**/5

COLLEGE HOOPS 2K6
ALL THE FUNDAMENTALS, NONE OF THE EXCITEMENT

1 PUBL 2K Sports DEV. Visual Concepts ES28 E MSRP \$29.99

One of the many great things about college basketball is that the crowd is just as important and just as intense as the game itself. The cheering, the band, the frantic waving of school colors—they all fuel players to drive down the court at breakneck speeds or to pass the ball around the perimeter with precision for a three-pointer. While *College Hoops* has more than enough in the game department, at times it just seems depressingly lifeless and boring—almost as if the development team was just going through the motions.

For some people this isn't going to matter all that much, especially considering that *College Hoops* has some decent gameplay mechanics and options. The on-the-court action does a pretty good job of mimicking the actual sport: Defenders play the passing lanes very well while in zone formations (maybe a little too well at times), and fast breaks are plentiful. Shooting is also easy as can be thanks to the right analog stick, which you can use for shooting, though it's worth pointing out that the shooting percentages seem a little bit off. Even when you're totally open or right underneath the basket, it seems a little too difficult to hit a clean shot most of the time. In addition, as always, the special moves found in 2K Sports' NBA games are included in *College Hoops*; they work well for the most part, but they do take a bit of getting used to if you're not particularly familiar with them.

Again, the gameplay is there, but the rest of the game is just so drab and shallow that you might as well be playing in an arena populated with a single cricket. It's just not very exciting to play or to watch, and for a college basketball game that just shouldn't be the case. **I** Giancarlo Varanini

PROS Good fundamental basketball, legacy mode offers plenty of great features, lots of online options

CONS Graphics are spotty, sound is terrible, and AI can be a little overzealous in playing passing lanes, it's just not that exciting at times

EA Sports EA Tiburon ESRB E10+ MSRP \$39.99

ARENA FOOTBALL MADDEN STREET?

Sure, the *Arena Football League* doesn't carry the same clout as the NFL, but that doesn't mean a good game can't be made out of its license. Considering that the AFL is based on offense, with 50-yard fields (compared to the NFL's 100-yarders) and 8-on-8 play (versus 11-on-11 in the NFL), it seems ideal for a high-scoring, arcade-style game of football. It's a shame, then, that while *Arena Football* mixes sim- and arcade-style play, it excels at neither.

The uniqueness of the league gives the game some immediate kudos. Knocking an opposing player over the waist-high walls surrounding the field and into some tables is amusing the first few times. Also, overthrowing the ball into the in-play netting behind each end zone and having it bounce back into a receiver's hands is pretty nifty. Though these differences are fun, the novelty soon wears off, leaving just the hit-or-miss gameplay.

For the most part, the game plays well—very similar to *Madden* games, in fact—though it's a shame the flow is hampered by a limited playbook (which in turn makes single-player action especially tedious). Also, while many EA Sports games make creative use of the right analog stick for on-field moves (including *Madden* for big hits), *Arena Football*, in an odd move, maps the

stick to an overly complex telemetry system, which basically boils down to a fatigue meter. Another problem: the atrocious running game. Granted, one could argue that the AFL is geared toward passing, which is a fully acceptable excuse. The problem lies in the execution of the rushing game, though. Jukes and stiff arms, which supposedly make defenders miss, prove to be woefully ineffective, meaning your runner goes down far too easily. As for presentation, lots of animations, like one-handed grabs, keep things interesting, which is good since the lack of commentary and the pitiful crowd reactions disappoint.

While *Arena Football* plays well and offers some decent multiplayer fun, you'll find better sims—*Madden*, *NFL 2K*—and arcade-style games—*Blitz*, *NFL Street*—out there. Compared to them, *Arena Football* comes across as too underwhelming. | *Greg Ford*

VERDICT A mix of *Madden* and *Blitz*, though not as good as either.

SCORE

3.5

THE MORE, THE BETTER?

By completing various challenges—say, passing a Be the Receiver challenge or completing a 40-yard TD in a game—you can unlock dozens of classic AFL teams. Cool, but it also makes you realize how much relocating a lot of AFL franchises have gone through

DON'T EXPECT THAT FEELING OF EXHILARATION YOU GET FROM EXECUTING THE PRINCE'S ACROBATICS IN ANY OF THE PS2 GAMES; YOU'LL JUST FEEL RELIEF IF YOU MANAGE TO PULL SOMETHING OFF WITHOUT DYING.

IF I RAN THE INDUSTRY

Every PSP game would have the following three features:

- 1. **Save anywhere, all the time.** Battery life is a fickle thing, and you can't always count on the game state being saved faithfully.
- 2. **Brightness adjustments.** The PSP is a portable system. Portable systems are played in a variety of lighting conditions. Dark games plus bright environments equals unpleasantness.
- 3. **Autosave.** Accessing the memory stick is so much quicker than accessing a PS2 memory card. PSP games should be exploiting that. Hint: If it requires any kind of confirmation, it's not an autosave!

PUB: Ubisoft DEV: Ubisoft ESRB: M MSRP: \$49.99

PRINCE OF PERSIA REVELATIONS

BEHOLD, A PALE HORSE

Imagine you had a dog as a child. He was the sweetest, smartest, most obedient dog you'd ever met. You told all your friends what a good dog he was and taught him all sorts of great doggie tricks. You loved that dog. That dog is *Prince of Persia: The Sands of Time*.

Then you went away to college. You came home years later to find that your dog couldn't play quite as well as he used to, and he didn't really remember all those old tricks. You still had fun with him, but you couldn't help mourning a little for the great dog that he no longer was. That's *Prince of Persia: Warrior Within*.

Now imagine you moved away. More years passed, and when you came home you found that your dog was just plain old. He couldn't walk straight, his hair was falling out, and he kind of smelled funny. He peed all over the carpets, and every so often he'd forget who you were and try to bite you. That's *Prince of Persia: Revelations*. And oh, how I wish we could put this old dog down.

While *Revelations* adds a moderate amount of content to *Warrior Within*, at its core it is essentially the same game. You might not think that would be such a bad thing; after all, on PS2 *Warrior Within* is a fairly decent experience (albeit by far the worst of the PS2 *Princes*). Here's the thing: Every single problem that *Warrior Within* has—crash bugs, out-of-sync audio, and all—is magnified on the PSP.

The biggest issue for me is the controls: The imprecise nature of the PSP's analog nub makes the tricky jumps and other platforming elements unbelievably floaty and frustrating. I lost count of the number of times I jumped the wrong way off a column, missed a wall jump, or just simply ran off a ledge. And while the *Prince* games have always been forgiving of missteps, it's obvious that no attempt was made to offer a little more leeway to compensate for the less-precise controller.

More constantly bothersome, though, is the fact that the dark, monotonous color scheme we knew and hated from *Warrior Within* frequently renders the game practically unplayable in anything other than a completely black room. You'll be minding your own business, walking down a hallway, and suddenly you're losing health because you've walked right into a spike trap that you can't see.

Add to this the reappearance of *Warrior Within*'s painfully repeti-

EVERY SINGLE PROBLEM IS MAGNIFIED ON THE PSP.

tive dual-timeline formula and the addition of frequent, extensive load times, and you've got one of the most egregious examples of the PSP's lazy port syndrome.

The Two Thrones made *Warrior Within* look much worse; I never expected something to come along to make it look *better*. *—Joe Rybicki*

VERDICT *Warrior Within* was a disappointment. Reproducing it without fixing its problems is a crime. Adding in new problems is an insult.

SCORE

2.5/5

HOT MIPAD

The woman behind the voice of Kallineia in the game is none other than Italian actress Monica Bellucci, who you may know from her role as Persephone in *The Matrix Revolutions* and *The Matrix Reloaded*.

1 PUBLISHED BY KONAMI | DEV. BY KONAMI | EST. 2006 | MSRP \$49.99

WORTH THE WAIT

The fact that *WWE SmackDown! vs. RAW 2006* is an almost identical port of its PlayStation 2 counterpart is an amazing accomplishment, especially considering how much content the PS2 version features. Unfortunately, it's also somewhat of a curse for the PSP in this case because the loading times are absolutely terrible. In fact, they're so bad that there even seems to be loading screens for the loading screens. It's not even that battery life becomes an issue as a result of this; it's just very irritating.

That being said, this is one of the best wrestling games created to date. The gameplay mechanics—with the exception of being able to execute multiple finishers in a single match—mimic the flow and feel of professional wrestling incredibly well. More specifically, stamina (which you have to recharge periodically through the match) and momentum shifts have been integrated in a way that makes matches a little longer than they normally are in most wrestling games, which is great from a gameplay standpoint (though not so much when you're out on the road and looking for a quick fix).

Other aspects of THQ's flagship wrestling series have also been revamped for the better. The story mode has full voice acting from the actual wrestlers, and not only are their performances good, but the story lines themselves are worthy of WWE programming. Any

fan will have a blast playing through it, but perhaps the best new feature is the general manager mode, in which you essentially take charge of one of the two shows—*SmackDown!* or *RAW!*—and control everything from who faces whom that night to promotions and match types. The goal is to have a better show than the competition, and you'll have access to plenty of data to ensure that's happening. The general manager mode is so good that you'll probably wonder why some developers didn't try a mode like this sooner.

The catch is that if you've played the console version, then none of this will be new to you. While you can transfer data between the two versions—which is a cool feature indeed—that's not really enough incentive to own them both. However, if you still haven't bought either, the PSP version may be worth your while. *—Giancarlo Veranini*

PROS: Nearly a perfect port of the PS2 game; great graphics, sound, and gameplay
CONS: Multiplayer is ad hoc, long load times, bit of a learning curve, the same as the PS2 version

SCORE

4.5

WORLD SOCCER WINNING ELEVEN 9

LIKE THE PS2 GAME, ONLY NOT QUITE AS GOOD

1 PUBLISHED BY KONAMI | DEV. BY KONAMI | EST. 2006 | MSRP \$49.99

...another slightly crippled port. Depending on how you look at it, it's either incredible that Konami managed to squeeze nearly everything from the PS2 version into the portable game, or it's just plain bizarre that the company left certain things out. For a quick overview of what makes *WE9* so good, check out the other review this month. With that out of the way, we can get into the juicier business of picking on the PSP version for its inadequacies.

First, we have the obvious stuff, the most heinous of which is that the load times are slap-you-in-the-face *baaaaaaad*. The first time you jump from the menu system to the pitch, you'll think your PSP gave up the ghost, because it takes over a minute before you see any signs of life. The only clue that anything is going on is the painful "graunch" of the UMD drive. Second is the fact that the PSP has two fewer buttons than a DualShock 2, and the PS2 game uses every button on the pad. What to do? Double-tap for some moves and hold down multiple buttons for others; it requires relearning the game, and some of the combos just aren't that intuitive. Then there's the fact that although the game is superficially a stunning facsimile of its grown-up, TV-bound brother, it lacks the Master League mode, which is the real meat of that game. Considering the game features a PS2-to-PSP USB link, this is a major disappointment. Master League on PS2 is a lengthy career mode that's guaranteed to tweak the obsessive-compulsive tendencies of every soccer fan who plays it, and it's something that would be absolutely *perfect* to continue while away from your TV. Its omission here leaves the transfer of teams and players between devices feeling somewhat redundant and gimmicky. Perhaps we'll see this in *Winning Eleven 10*.

All said, though, as a single-match footy game, *WE9* is a visceral and satisfying experience that provides a greater sense of connection with the sport than *FIFA* manages. Sadly, its inadequacies can't justify the same score as the PS2 game.

DEBATE: The lack of the PS2's Master League mode hits this one where it hurts.

MIDWAY ARCADE TREASURES: EXTENDED PLAY
 LUKEWARM NOSTALGIA
 | PUBL: Midway | DEV: Midway
 ESRB: M | MSRP: \$39.99

BLOOD AND GUTS
 The M rating on *Extended Play* comes to you courtesy of *Mortal Kombat II* and *Mortal Kombat 3*. Apparently, it doesn't matter how pixelated you get: Pulling someone's heart out just isn't cool with the ESRB.

PINBALL HALL OF FAME: THE GOTTLIEB COLLECTION
 THEY CALL ME "FLIPPER"
 | PUBL: Dave | DEV: FarSight Studios
 ESRB: E | MSRP: \$29.99

...pinball player, but every once in a while, I enjoy throwing away a few quarters. There's something about the physical interaction with a table that's satisfying, even if I'm no wizard.

Pinball Hall of Fame can't give you that physical feeling, but it can offer up 10 classic tables that you never have to drop a quarter into. You can work on fulfilling a specific goal for each table or try the Gottlieb Challenge, which runs you through all the tables in a row. Instructions are available for each table, pointing out the places to go to score points—a great addition for tables you're not familiar with.

The graphics look really nice, but a short widescreen doesn't accommodate a tall, vertical table very well. There is an option to flip the table so that it's oriented vertically on the screen, but you can't change among the three camera viewpoints in that orientation. The Tilt button is also practically inaccessible in the vertical mode, although that's not too much of a loss since it's so sensitive that you rarely use it unless you're trying to save a ball from dropping.

Since the shoulder buttons serve as the primary controls, I found myself gripping the PSP tightly by the sides. And that meant I often accidentally turned off the power by rubbing the side-mounted power switch. When I wasn't short-circuiting the game myself, there were bugs to contend with—about once an hour, the game would freeze and I'd have to restart.

Restarts, bad viewpoint, accidental perspectives, and all, I still had fun playing *Pinball Hall of Fame*. But it mostly just made me want to go find some real-life pinball tables.

8000 Good quick bursts of gaming, pretty tables
800 Poor table visibility, buggy
 SCORE **2.5/5**

MEGA MAN MAVERICK HUNTER X
 FEELS LIKE A NEW GAME... MOST
 | PUBL: Capcom | DEV: Capcom
 ESRB: E | MSRP: \$29.99

...that have come out in the past few years, *Mega Man Maverick Hunter X* stands as an example of what every developer should do—actually take advantage of the new hardware and seize the opportunity to add something new. In fact, the locations of some items have been changed around, so even if you have played the original *Mega Man X*, chances are good that you'll have a few head-scratching moments followed by an "I don't remember that being there."

You'll certainly think that way about the graphics. *Maverick Hunter X* looks fantastic thanks to new and incredibly vibrant 3D characters and backgrounds that fit the *Mega Man* world perfectly. These new visuals only help to reinforce the feeling of playing an entirely new game... though in some cases, you actually *are* playing a new game.

In addition to some special items being relocated (like the upgrades that X can obtain by exploring some of the levels), there's actually an entirely new playable character named Vile, who you encounter in the first level of the game when he attacks you in his mech. He even has a unique story line (yes, more story elements have been introduced as well) and play style. You really can't ask for any more from a remake.

The only problem is that the game is pretty standard stuff as far as *Mega Man* titles go. It still the same formula of beating up several bosses and using their weapons against them before moving on. The game is fun to play through and remains challenging, but the fact that this is indeed a part of a much older game—as evidenced by its repetitive nature—still pokes its head in every now and then.

8200 Great graphics, sound, and extras
6000 Still a part of an old game, action gets kind of repetitive due to the old formula
 SCORE **4/5**

back in its day was mind-blowing. The special effects were unbelievable, some of the coolest things ever to cross a movie screen. Now, however, though the movie itself is still pretty good, the special effects have fallen from totally awesome to pretty low-tech.

It's the same kind of situation with *Extended Play*. The collection includes games that were great and are still pretty good, but they're starting to become more important for posterity's sake than because they're something you'd actually pick up and play for any huge length of time.

Extended Play includes a whole slew of games, but though some of them—like *Defender* and *Sinistar*—hold up pretty well and provide a decent round of gaming, others, most notably *Mortal Kombat II* and *Mortal Kombat 3*, just aren't really all that fun to play, thanks to their awkward controls. Also an issue is how the games are presented onscreen—some get stretched across the whole screen, skewing their proportions, while others are rendered as a vertical rectangle centered on the screen, making them impossibly small.

The package's presentation is incredibly minimal as well, with the games all dropped into the most generic of interfaces. Existing wireless multiplayer works well, but you're still stuck with the same issues of visibility and awkwardness that you have in the single-player games, so it begs the question of how fun wireless play actually is.

For Midway to produce a collection that would truly be considered essential, it will have to spend a lot more time finessing the ports of these games, which might negate the whole strategy (and profitability) of these packages in the first place, which is to make a quick and easy buck off of nostalgia. Sure, companies need to make money, so I don't condemn Midway for continuing to do this—but that doesn't mean we have to buy *Extended Play*.

8200 Just because you *can* play these games on PSP doesn't mean you *should*.
 SCORE **3/5**

Most puzzle games are, in some fashion, tests of intelligence. But *PQ* is, to my knowledge, the first game to actually claim to be a true IQ test. With its 100 levels (or "questions," as they're called), the game throws at you a variety of tests of spatial reasoning, timing, simple math, and memory.

The surprising thing is that, while it may sound like a bad afternoon in school, the game is actually astonishingly addictive. This is in large part due to its stark simplicity: You control a featureless white silhouette in a futuristic, *Trojan*-like VR environment, and your only goal is to get to the exit of each room. Doing so may entail moving boxes, opening color-coded doors, even dodging guards—but all these behaviors are controlled with a single action button. Like all great puzzle games, *PQ* is simple enough to pick up instantly, but complex enough that even the smartest player might have trouble getting past some of the later levels.

In fact, the game's only fault lies in its handling of failed levels. Due, I assume, to the IQ-test structure and a desire to make it difficult to cheat your way to a genius level, you can't go back and replay failed questions without replaying the entire game. You do have the option of replaying 10-level stages,

but only if you've passed all 10 levels in the main game. Fail just one and you can't replay any in that stage without playing through the stage again in the main game. This severely limits the game's replay value, sacrificing one of the primary criteria for a truly legendary puzzle game—and it's especially damaging for a portable game.

Still, the experience is satisfying enough the first time through that it's an easy recommendation for any fan of puzzle games. The later levels may prove maddening, and getting this close to beating a level only to have the time run out on you is terribly frustrating. But it's a rare game that actually makes you smarter—and makes the process both entertaining and addictive. *PQ* succeeds on all counts. *Joe Rybicki*

VERDICT It'll stretch your brain like taffy... but it's a bit short on replay value.

SCORE **4.5/5**

ARMORED CORE: FORMULA FRONT
AGETEC TURNS LEAD INTO GOLD
PUB: Agetec DEL: From Software
RATES: T: MSRP: \$39.99

Based on the import version of the game, I was pretty sure I was going to hate *Armored Core: Formula Front*. After all, the original is basically a tech demo in which each battle's outcome is decided as soon as the match begins; the player's input is limited to customizing a mech and adjusting a few AI sliders. It's the worst kind of gameplay-free waste of a player's money and seemed like an easy candidate for the worst game yet released on the PSP. My knives, as they say, were out.

Funny how things change. The reason for the long delay for the American release, it turns out, is that From Software went and made *Pinocchio*-like changes to turn *Formula Front* into a real game. Having done so, all the things that previously made the game a bore become positive assets.

For example, since the original offers nothing but customization, there is at least a numbing amount of it to be done. It's almost the *Gran Turismo* of mech combat games, with tons of options available for even esoteric parts like radiators and generators—not to mention the ability to tune those parts more precisely once you've installed them. Putting all that into the service of a real combat engine might actually make this one of the best *Armored Core* games on any system.

As thoughtful as adding true controls is, they're not perfect, with the action suffering slightly due to the PSP's lack of a second analog stick. There's a lock-on window, so you don't have to be too precise with your shots, but it still feels sluggish when the enemy has moved behind you and you're trying to swing the camera around.

Still, *Formula Front* turned out surprisingly well for a late-stage retrofitting. Kudos to From for a pretty successful bit of alchemy. *Nich Maragos*

WAVE/DANCE
If you're into the "decided from the beginning" gameplay style of the Japanese version of *Formula Front*, the AI option still exists, or you could try *Mega Man Battle Chip Challenge* for the GBA.

YOU ARE SO SMART
So, Mr. Mensa, want to see how that big brain of yours really stacks up against the competition? Beat *PQ* and you'll have the option of checking your score against those of *PQ* players all over the world via the PSP's infrastructure networking.

THE MORE THINGS CHANGE **New and welcome manual control...**
THE MORE THEY STAY THE SAME...even if it feels a tiny bit tacked on.
SCORE **3.5/5**

I have a **personal favor** to ask of you game developers. In the future, when porting PS2 games to PSP, I would like for you to do the following: Take a UMD of your unfinished game and put it in a PSP. Go ride a bus or subway. Play your game in a variety of settings, under a variety of lighting conditions. Make several different trips of varying lengths.

Now, ask yourself: Do the controls still work? Can I see everything onscreen OK? Did I spend more time playing than loading? If the answer to any of these questions is "no," go back to the studio and **change it**.

WCP2 is a perfectly adequate game on PS2—definitely the most realistic poker game in terms of your opponents' play (though that's not saying much). But

on PSP, the minor annoyances of the PS2 version become major. You can almost hear the slow, unskippable animations chewing through your battery life. The neat rotate-the-stick bluffing minigame becomes simply annoying with the analog nub. And the career mode takes forever due to the ridiculous load times.

The simple infrastructure multiplayer adds some replay value, but overall this port is poorly thought out. *1 Joe Rybicki*

VERDICT A poor port of a solid game.

SCORE 2.5/5

POKER FACE

One of the best ideas in *World Championship Poker 2* is the inclusion of the bluffing minigame in infrastructure play—meaning you might actually learn something by watching the behavior of your opponents. You also get the option to **flout your hand** if you win uncontested.

With so many PSP games out there that are barely different from their full-size counterparts, there's little to no reason to buy both versions. *Harry Potter* is one such example. Aside from a few minor changes—some added minigames, an excised level—this is the same game as its PS2 counterpart.

Play as Harry, Ron, or Hermione (and bring in friends to play cooperatively with you), fight your way through the three challenges of the Triwizard Tournament, and collect beans to purchase upgrades in the form of cards. It's obvious that the developers assumed some level of familiarity with the plot; there's little here in the way of the story. And the minigames that have been added to this version are pretty insubstantial.

The graphics look pretty, and while the controls and camera can sometimes suffer in a PSP port, these make the transition intact, which means they're very serviceable if not excellent. However, there's really nothing new about the game. And though that's not necessarily a bad thing, it does mean that there is absolutely no reason to own both versions of the game. *1 Dana Jongewaard*

VERDICT Same as the PS2 game, so pick one or the other.

The Rock, Karl Urban

DOOM

ONE (VERY) SMALL STEP

BY JOHN SCARSI

As far as videogame movies go, *Doom* is middlin' acceptable: It's got one big star (The Rock), a couple of other recognizable faces (most prominently Karl "I Was Eomer!" Urban), and a director—urban-action specialist Andrzej Bartkowiak—who has some sense of where to point his camera. It also features a few clever touches, like naming characters Carmack and Willits (two of the folks at id Software who created the *Doom* game), and sequences where we see the action from a first-person-shooter perspective, which is a nice acknowledgment of where this film originally comes from.

So: not bad for a videogame film. But now let's remember that videogame films are one of most debased genres of film known to the human race—on average so idiotically written, acted, and directed that as a class they're barely a step up from erotic bug-crush videos (and when Uwe Boll is directing, a couple of steps down). Saying that *Doom* is a decent videogame film is like saying you're happy your kid no longer needs padded spoons to eat soup: yes, it's a good thing, but think about where you're starting from.

Compared to real films, *Doom* is fairly lame, and ironically, pales in most ways (including special effects) to *Doom 3*, the most recent iteration of the videogame. When your movie makes less sense than a game that requires mere repetitive demon-shotgunning, that's bad news. I like The Rock and I even like Karl Urban, but there's not a moment in this flick when I wasn't thinking, "I could be playing the game instead of watching this," which makes it no different from any other videogame film. I wonder if there will ever be a videogame film that makes me think otherwise.

SCORE

2.5

**ELIZABETHTOWN**

Orlando Bloom, Kirsten Dunst

Cameron Crowe films are either dead-on about people (*Say Anything*, *Jerry Maguire*, *Almost Famous*) or couldn't figure out where they were going if they had a map and a GPS tracker (*Singles*, *Vanilla Sky*). This film is in the second category: Orlando Bloom is supposed to use the death of his dad to help find himself (with help from Kirsten Dunst), but the film keeps getting sidetracked and not much happens. A shame. Pretty cast, though.

SCORE 2.5

**DOCTOR WHO/RED DWARF VII**

Christopher Eccleston, Craig Charles

It's a big month for people who like resurrected British science-fiction series. First up: *Doctor Who*. The original run of this series went from 1963 through 1989 and featured special effects that looked as though they cost a pound and twenty pence an episode. The 2005 version is pretty much a ground-up reinvention: better production values, better acting, better stories—and a doctor (Christopher Eccleston) who doesn't appear to have been marinated in a vat of twee.

Of course, if you're really hardcore, you'll be checking out *Red Dwarf Series VII*, the long-delayed seventh season of that comedy sci-fi show about a bunch of losers on a spaceship 3 million years in the future. This show's cheese factor is still maxed out, its effects are still lame, and it's still pure geeky fun. Enjoy.

SCORE 4.5

**JUST LIKE HEAVEN**

Reese Witherspoon, Mark Ruffalo

This is a very cute romantic film that becomes unspeakably creepy if you spend any time at all thinking about it afterward, so don't. Mark Ruffalo is a man who discovers that a woman looking just like Reese Witherspoon is in his apartment; normally, this would be regarded as a good thing, but, see, she doesn't really exist, and Ruffalo has to figure out if she's a ghost or if he's lost his marbles or what (it's "what!"). Supermega ultra date-film material.

SCORE 3.5

**PROOF**

Gwyneth Paltrow, Anthony Hopkins

So there I was, typing up a review a couple of years ago and feeling pretty damn pleased with my writing life and how it was going when I looked over at the news and discovered my college classmate Dave Auburn had won the friggin' Pulitzer Prize for his play *Proof*. So there's some excellent career perspective for you. However, *Proof* deserved the accolades, and the movie is pretty good, too. So this is me pimpin' Dave's film to y'all.

SCORE 4.5

**WALLACE & GROMIT**

Ralph Fiennes, Helena Bonham Carter

As an animation fan, I've always felt mildly ashamed that I've found the *Wallace & Gromit* short films only mildly amusing; I could see why people adored them, but they weren't quite there for me. *Were-Rabbit* fixes that—it's ridiculous and clever and quaint, and "quaint" is not a word one gets to use much about animation these days, and Gromit the dog is definitively the best silent comedy actor since Buster Keaton. Not bad for plasticine.

SCORE 4.5

**MIRRORMASK**

Stephanie Leonidas, Gina McKee

Graphic novel icons Neil Gaiman and Dave McKean were given \$4 million to make a movie, and let's just say that visually speaking, these guys know how to stretch a dollar until it screams. *MirrorMask* is 200-proof freaky-ass eye candy, the sort of film you wish they would make a videogame from, so you could spend time wandering through every nook and cranny of the world. If these guys had \$100 million, your head might explode.

SCORE 4.5

**SAW II**

Tobin Bell, Donnie Wahlberg

The original *Saw* was a fairly nasty piece of work (trap people in a room, make them do unspeakable things to escape), so it stands to reason that the sequel would have to up the nastiness just to keep up. And it does! There's a heartwarming lesson for you. There's a plot, but does it matter when people are digging into their eyeballs and playing with dirty syringes? Probably not. Horror fans, have fun. Everyone else, stay far, far away.

SCORE 2.5

**ZATHURA**

Tim Robbins, Dax Shepard

Finally! The sequel to *Jumanji* that—as far as I've been able to tell—not one single human being in the world was waiting for! Which might explain its less-than-stellar performance at the box office. But we took our kid to it and she liked all the robots and space lizards and special effects, so if you are a kid, have a kid, or, thanks to a transplant, are a kid at heart, this film will probably work as intended.

IUP AWARDS

PLAYSTATION
EDITION

THE BEST OF 2005, ACCORDING TO YOU

GAME OF THE YEAR

RESIDENT EVIL 4

With the PS2 port of this action-packed zombie-massacre masterpiece proving to be every bit as excellent as the original GameCube version, it's not hard to see why *RE4* took top honors this year. What is surprising is that the PC RPG *Guild Wars* was hot on its heels—and that *God of War* trailed in a very distant third place.

ADVENTURE

SHADOW OF THE COLOSSUS

Few games epitomize the idea of adventure better than *Shadow of the Colossus*, so good job selecting it as Adventure Game of the Year. It's also worth noting that *Grand Theft Auto: Liberty City Stories* made a very respectable showing in second place.

FIGHTING/RESTLING

SOUL CALIBUR II

Well, duh. While *Dead or Alive 4* on Xbox 360 didn't do too badly, what else of note was there this year? *SmackDown! vs. RAW 2006*? *Street Fighter Anniversary Collection*? This one was a he-brainer.

MOST INDIQUATUE

INDIGO PROPHECY

This is a pleasant shock. *Nintendogs*, the virtual pet simulator for the Nintendo DS, surprised no one by coasting into first place here, but seeing the delightfully unorthodox occult adventure *Indigo Prophecy* take the runner-up position warmed our hearts.

PUZZLE

LUMINES

Tetsuya Mizuguchi went head-to-head with himself this year, with *Lumines* and his DS puzzler *Meteos* battling it out for top honors. In the end, though, *Lumines* won handsly, proving that...um...the PSP rules all? Or perhaps just that simpler games are more widely appealing.

ACTION

RE4

Before *RE4*, we'd never have dreamed that a *Resident Evil* game would not only earn a nomination for Action Game of the Year but actually win the award easily. *God of War* made a better showing in this category than in Game of the Year, but *RE4* still cleaned up.

RACING

NEED FOR SPEED: MOST WANTED

OVERALL WINNER: Mario Kart DS (Nintendo DS)

Huh. So what you're saying is you prefer a hand-drawn kart racer and an only slightly warmed-over rehash of *Need for Speed Underground* to the spectacular adrenaline rush of *Burnout Revenge*, which trailed in third place. You people are crazy. But hey, it's your awards show.

SPORTS

TONY HAWK'S AMERICAN WASTELAND

OVERALL WINNER: Madden NFL 2006 (Xbox 360)

Madden only just edged out *THAW* for top honors here, which for *THAW* is quite a feat, as the *Madden* series routinely tops the sales charts year after year. It's doubly impressive since we think *THAW* is one of the least inspiring *Tony Hawk* games in years.

ONLINE/MULTIPLAYER

STAR WARS BATTLEFRONT

© 2005 LucasArts Ltd.

Yeah, we're all *Star Wars* fans, so we can't blame you for voting with your nostalgic little hearts. And we can't really fault you PC gamers for praising a game designed pretty much exclusively for online play. But seeing the PSP's excellent *SOCOM*, *U.S. Navy SEALs Fireteam Bravo* limping along in ninth place—that's just hurtful.

RPG

DRAGON QUEST: JOURNEY OF THE CURSED KING

Is it possible? Could it be that gamers in the United States have finally caught on to what the Japanese have known for years? Yes, the *Dragon Quest* franchise really does well and truly *rocks*, and you should all pat yourselves on the back for recognizing this fact.

SHOOTER

BROTHERS IN ARMS: EARNED IN BLOOD

Don't get too excited there, *Brothers in Arms* fans—this is a pretty hollow victory. Yes, *Earned in Blood* was the highest-ranking game on a PlayStation platform, but it placed *eighth*...admittedly against some very stiff competition from the likes of *F.E.A.R.*, *Half-Life 2*, and *Doom 3*.

Tom Byron

THE INCREDIBLE HULK: ULTIMATE DESTRUCTION

Big open worlds, excellent controls, awesome action—this underrated gem shows the right way to make a superhero game.

Joe Rybicki

PRINCE OF PERSIA: THE TWO THRONES

It's the best game in one of the best series around, with one of the best endings ever.

Dana Jongeward

ROD OF WAR

An action game without all the fat, leaving a nice meaty slab of gaming goodness.

Giancarlo Varanini

GUITAR HERO

No other game lets you live out a life dream of being a fake rock star quite like *Guitar Hero*.

Thierry Nguyen

RESIDENT EVIL 4

A perfect example of how to redeem a series that's lurched into crap.

Logan Parr

RESIDENT EVIL 4

This is a prime example of taking your game to the next level. Absolutely amazing in every way.

Ryan Vulk

METAL GEAR RISE

A perfect addition of story and gameplay to a flawless series.

Alejandro Chavetta

BURNOUT 3

With better cars and more breakage, it is the logical (faster and better-looking) evolution of *Burnout 3*. Simply addictive.

THE BEST

"THE HD ERA REALLY ONLY STARTS WHEN WE ARE ON THE MARKET." THAT'S ACCORDING TO SONY BIGGIE PHIL HARRISON, SPEAKING OF THE UPCOMING PS3 IN A RECENT INTERVIEW WITH GAMESINDUSTRY.BIZ. BUT DOES THAT MEAN YOUR SHINY NEW HDTV IS NOTHING BUT AN EXPENSIVE PAPERWEIGHT UNTIL SONY ROLLS OUT ITS NEW BOX?

WELL, NOT REALLY. A SURPRISING NUMBER OF PS2 GAMES ALREADY TAKE ADVANTAGE OF THE HIGHER RESOLUTION AND WIDESCREEN DISPLAY ON YOUR NEW TOY. THE PROBLEM IS THAT THERE'S REALLY NO STANDARD HD GUIDE FOR PS2 GAMES. SOME GAMES DESCRIBE RESOLUTION AND WIDESCREEN SUPPORT RIGHT ON THE BOX. SOME DON'T. SOME LET YOU ADJUST THE SETTINGS VIA THE IN-GAME MENU. SOME REQUIRE STRANGE BOOT-UP BUTTON SEQUENCES AND ANIMAL SACRIFICES TO RUN AT 480P. IT'S ALL RATHER FRUSTRATING.

SO BECAUSE WE LOVE YOU, WE'VE COMPILED A LIST OF SOME OF THE BEST HD-COMPATIBLE PS2 GAMES AND EXPLAIN EXACTLY HOW YOU UNLEASH THE HIGH-RES POWER OF EACH DISC.

LOOK SHARP

THE HD ERA IS ALREADY HERE!

GRAN TURISMO 4 (Sony CEA)

Gran Turismo 4 is the only PlayStation 2 game that supports a resolution of 1080i, though you can still set the game to 480p if you really want to. Both options—plus the widescreen mode—can be accessed from the menu found in your garage. Oddly enough, none of this is mentioned on the game's packaging.

The settings all result in a sharper image, but there's not much in the way of a peripheral-view advantage. And every time you switch from a race to a menu or loading screen, the game does an annoying resolution switch that leads to a lot of blinking and flashing on your TV.

SHADOW OF THE COLOSSUS (Sony CEA)

Yet another game that *doesn't* mention progressive-scan support on the box, the gorgeous *Shadow of the Colossus* supports both 480p output and a 16:9 aspect ratio, each accessed from the in-game menu and available at any time.

The 16:9 aspect ratio doesn't seem to result in any sort of noticeable screen cropping, and the 480p output does look a tad sharper than normal, but not by a lot. It's kind of strange, considering the textures in *Shadow* are so intricate. Still, the game looks awesome no matter what, and the graphics whores among us are sure to notice the extra four pixels in each strand of colossi ass hair.

GOD OF WAR (Sony CEA)

Not only is *God of War* one of the best action games to grace the PS2, but it's probably the one that takes the best advantage of your HDTV. The intricate textures on the main character and in most of the levels really pop when you set the game to progressive-scan mode, and the widescreen setting features little to no cropping, unlike in a lot of other PlayStation 2 titles.

Both settings can be changed at any time during the game by entering the options menu. That's good because it means there are no weird button combos or setup screens to keep you from simply jumping into the mythical beast slaying and hot Greek threesomes of the main game.

SOCOM 3: U.S. NAVAL SEALS (Sony CEA)

Another of the PlayStation 2 games to feature the rare true 16:9 support (as in, the screen doesn't get horribly cropped and zoomed) is *SOCOM 3*. Access the widescreen and progressive-scan settings right in the options menu in order to experience the fight on terror the way it was meant to be seen. Now you can really see the whites of their eyes before you fire.

SOUL CALIBUR III

(Namco)

Here's where things get weird. To access the progressive-scan mode in *Soul Calibur*, you must hold the X and Triangle buttons on the controller while turning on the PS2. Keep holding them until the game boots up and offers you the option to play in 480p. There is no way to set the resolution otherwise. You can change the aspect ratio to 16:9 through the options menu, however.

Soul Calibur III is a darn fine-lookin' game, and progressive scan just makes it look that much nicer. Again, not a huge leap in graphical quality, but a noticeable one. The downside is that the widescreen support actually zooms and crops the screen, meaning you're losing a bit of the image at the top and bottom of the display. This is pretty common on the PS2.

BLIARNOU REVENGE

(Electronic Arts)

Burnout Revenge is yet another game that requires you to use the boot-up code to access progressive scan (hold X and Triangle on the controller while turning on the system).

Because the game moves so quickly, it's hard to notice that big a difference in the graphics while you play, but again, real graphics sticklers will surely see the upgrade.

A bit more weirdness to add to *Burnout Revenge*—the only way

to switch to a 16:9 screen ratio is to set it right on your PlayStation 2. Boot up the system without a game in it and head over to your system options. Find the aspect ratio setting there and change it to 16:9; otherwise, you'll find that the world of *Burnout Revenge* is decidedly fatter than it should be.

JAK 3

(Sony CEA)

The final game in our HDTV playlist is *Jak 3*, and like most other PS2 titles, it doesn't really feature any stunning differences when played in progressive scan. The *Jak* series has always featured cartoony visuals that already look great on a regular television, so while you'll notice a sharper image in 480p, it's nothing to get too excited over.

Unfortunately, *Jak 3* is another game in which the widescreen setting zooms the image and crops the top and bottom of the screen rather than extending the viewing area horizontally. Lame.

Both settings can be found in the options menu and changed at any time during the game.

For information on other PlayStation 2 titles, a great online resource is www.hdtvarcade.com/ps2list.htm. There you'll find a giant list of PS2 games and whether they support a 16:9 aspect ratio; 480p, 720p, or 1080i resolution; Dolby sound; and online play. *Greg Sewart*

SOME GAMES LET YOU ADJUST THE SETTINGS ON THE IN-GAME MENU. SOME REQUIRE STRANGE BOOT-UP BUTTON SEQUENCES AND ANIMAL SACRIFICES TO RUN AT 480P.

FORGOTTEN GEM JUMPING FLASH!

CREATIVE AND ADDICTIVE, SONY'S
3D PLATFORMER BOUNDED INTO
PLAYSTATION HISTORY

Illustration: Glenn Brantton

A year before Nintendo "invented" the 3D platformer with *Super Mario 64*, a Japanese developer called Exact neatly beat Mario to the punch with an addictive little game called *Jumping Flash!*

Published by Sony a few months after the PlayStation launch, *JF!* was the spiritual sequel to a game for the Japanese X68000 PC by the name of *Geograph Seal*. The earlier game was merely a primitive sketch of an idea compared to its PS1 successor, which was both highly polished and visually stunning. (Admittedly, it's not so impressive-looking now, but keep in mind that flat-shaded polygons had much more cachet in 1995.)

JF! feels as much like a first-person shooter as it does a platformer. The entire game is viewed from within the cockpit of the player's Robbit, a cross between a mech suit and a bunny. And like a bunny, Robbit gets around by leaping. Not normal jumps, mind you, nor even double jumps, but incredible triple leaps that carry the player hundreds of meters into the air.

As a result, the standard play mechanics of the FPS genre are turned on their large, floppy ear; *JF!* has less to do with circle-strafing and more to do with getting to the high ground—really high. Robbit's world

features plenty of floating rocks and elevated areas to navigate, and getting out of a tough spot is as simple as hitting the jump button a few times and landing half the level away...except in the few claustrophobic interior levels, of course.

JF! FEELS AS MUCH LIKE AN FPS AS A PLATFORMER

While anyone who's ever played a jump-intensive FPS like *Turok* is likely to run screaming at the thought of a shooter built entirely around hang time, *JF!* handily avoids the frustrations common to the genre with a single simple innovation. As players begin their descent from way up in the sky, the camera automatically tilts slightly downward to reveal Robbit's shadow. Lining up your shadow with the chunk of real estate you hope to land on is a simple task, provided you possess the slightest hint of hand-eye coordination.

Brilliant as it is, *JF1* has been largely forgotten by time. Gamers were quick to forget its charms once *Super Mario 64* arrived and developers the world over decided that the third-person perspective should become the standard for 3D platformers. Exact's masterpiece was finally given its due in 2002, when Retro Studios gave bounty hunter Samus Aran a Robbit-like double jump in *Metrod Prime*. Suddenly, everyone remembered that they'd seen a remarkably similar setup years before....

After releasing *Jumping Flash! 2* in 1996, the *JF1* team went on to create the PS1 version of *Ghost in the Shell* (a game so good that it became the cover story for *OPM's* first issue) before producing a lackluster third installment, *Robbit Mon Die!* This was followed by *Pocket MuuMuu*, a collection of minigames for the PocketStation; neither made it to the United States, although it was no real loss as neither lived up to the high standard set by the originals. Ignore the weak follow-ups; both *Jumping Flash!* and its first sequel are still good fun. Dated fun, sure. But still good. *Jeremy Parish*

PS1-DERLAND

IS THAT A STATION IN YOUR POCKET, OR...?

By Jeremy Parish

When he's not trying to reclaim his vanished youth with obsolete games, Jeremy works as 1UP.com's features editor and charming mascot. Check out his blog at writing.1UP.com

The success of the PlayStation family sometimes makes it easy to overlook the blemishes on Sony's track record. Take the company's first portable system, for instance. No, no, not the PlayStation Portable—the PocketStation.

Resembling a memory card that had a baby with a Tamagotchi, with a 32-by-32-pixel black-and-white LCD screen and an insatiable hunger for expensive, nonrechargeable batteries, the PocketStation was everything the PSP isn't. It had much more in common with Sega's Dreamcast VMU. In fact, the debate over who came up with the idea for the system first continues to rage among some of the Internet's more tenacious fanboys.

The PocketStation never quite made it to the United States. As anyone who's ever messed around with a VMU can probably guess, it wasn't exactly host to compelling gaming experiences. That didn't stop Sony from creating PlayStation software that existed for the sole purpose of providing PocketStation downloads, though, most notably *Jumping Flash!* spin-off *Pocket MuuMuu* and *Doko Demo Issyo*, which featured the debut of Sony's Japanese mascot, Toro.

Real PlayStation games supported the PocketStation, too. *Final Fantasy VIII* was the highest-profile hit with its Odaka ke Chocobo minigame—also notable as the only PocketStation game officially supported in the United States. Odaka ke Chocobo was an ultraprimitive

THE POCKETSTATION WAS EVERYTHING THE PSP ISN'T

dungeon crawler that didn't come within spitting distance of fun, but any goodies you acquired while playing could be transferred back to the PlayStation game. As it turns out, several abilities in *FFVIII* could be acquired only through Odaka ke Chocobo, so you anal-retentive completist types may want to start prowling eBay for cast-off PocketStations.

The U.S. releases of *Street Fighter Alpha 3* and *Ridge Racer Type 4* supported PocketStation as well, though unofficially. Hardcore fans might want to take the titles' respective minigames for a spin—or not, since they were about as entertaining as your mom's Tupperware parties. Konami, on the other hand, made the PocketStation-only elements of *Metal Gear Solid VR Missions* accessible within the main game for U.S. players.

Oddly enough, the best use of the PocketStation came in a set of repackaged NES games, the *Rockman Complete Works* series. *Works* compiled the first six *Mega Man* games with no graphical upgrades and only a smattering of new features for \$30 apiece, which explains why they never came to America. The one significant addition Capcom did make to *Works* was the surprisingly robust PocketStation minigame Pokerock.

Playing Pokerock let players go rock-paper-scissors against classic *Mega Man* bosses, who could be controlled as well. The coolest feature was the mix-and-match between games. Ever wonder what would happen if *MM3's* Magnet Man fought *MM2's* Metal Man? Pokerock is the only way to know. It even allowed for head-to-head battling with other players via infrared, which would go on to be a key component of the *Battle Network* games. On top of that, performing well in the minigames unlocked certain bonus features in the PlayStation games.

It's easy to see what Sony was thinking with the PocketStation—it's a memory card and a game system! Build up your save files while sitting on the bus! But there's only so much fun you can have with 1980-level game technology. Still, it certainly makes you appreciate your PSP all the more. |

LIKE A BUNNY, ROBBIT GETS AROUND BY LEAPING, NOT NORMAL JUMPING. MIND YOU, NOT EVEN DOUBLE JUMPS, BUT INCREDIBLE TRIPLE LEAPS THAT CARRY THE PLAYER HUNDREDS OF METERS INTO THE AIR.

PLAYSTATION'S GREATEST MISSES

1 UNDERAPPRECIATED CLASSICS

THE LIFE OF A VIDEOGAME CAN BE CRUEL. BORN TO BLOCKBUSTER EXPECTATIONS AND SURROUNDED BY CUTTHROAT COMPETITION, GAMES HAVE A SINGLE HOLIDAY SEASON TO MAKE THEIR CASE FOR EXISTENCE. THE STRONG BIG-SELLERS SURVIVE ON THE SHELVES FOR MONTHS, SOMETIMES YEARS, WHILE THE WEAK ARE QUICKLY DUMPED INTO BARGAIN BINS, SOLD AND RESOLD ON EBAY AT A PRICE ROUGHLY EQUAL TO THE COST OF SHIPPING. SOMETIMES, GREAT GAMES SLIP THROUGH THE CRACKS, DOOMED TO TRAVEL THE USED-GAME CIRCUIT UNTIL ABUSE RENDERS THEIR DISCS UNREADABLE. THESE ARE PLAYSTATION'S GREATEST MISSES.

NO ONE CAN STOP MR. DOMINO

1998

A puzzler owing less to *Tetris* than the rainy-day pastime of domino toppling, *No One Can Stop Mr. Domino* is an interesting oddity. Racing around *Katamari Damacy*-esque stages (convenience store shelves, a living room, etc.), you lay down lines of dominos then topple them, terrorizing and abusing the level's inhabitants to comedic effect.

RIISING ZAN

1999

Part spaghetti Western, part samurai slasher, *Rising Zan* is a lovable mess of a game. Zan, the main character, is equally comfortable with a sword or a revolver and uses both to stylishly gut sumo wrestlers, scarecrows, and a horde of random bad-guy meat. With an "All Your Base Are Belong to Us" level of translation that drops catchphrases like "Super Ultra Sexy Hero," Zan is a treasure trove of quirk.

LIM JAMMER LAMMY

1999

Sure, everyone played *Parappa the Rapper* (the rhythm-genre-pioneering rap game), but did you play its guitar-shredding, pregnant-teen-hallucinating little sister? *Lim Jammer Lammy* uses the same Simon Says gameplay and paper-thin art style of *Parappa* but piles on the surreal happenings. Our heroine bashes out riffs on vacuum cleaners and fire hoses, rocking her way to hell and back and blowing the fragile minds of unsuspecting gamers along the way.

INCREDIBLE CRISIS

2000

A typical Japanese family sets out to celebrate their grandmother's birthday but runs up against a patch of ridiculous bad luck, disasters, humiliations, and bizarre situations. *Incredible Crisis* plays out this scenario with a series of simple minigames. You might, for example, help the father of the family bring a female coworker to orgasm by feeling around in the dark for her back-massage sweet spot. There are few games that can match the sheer weirdness of *Incredible Crisis*.

THE ITALIAN JOB

2002

Before the 2003 Marky Mark Hollywood remake soured its name, *The Italian Job* made a last-minute grab at the PS1 car-chase crown. Based on the swinging '60s-era cult film, the game is all about launching tiny European cars off of historical landmarks. It's a speedier, less-fussy version of the formula *Driver* made popular, and it's still worth the bargain-bin price.

ZONE OF THE ENDERS

2001

If you bought this game when it came out, it was probably for the playable demo of *Metal Gear Solid 2* included in the package. But the superfast, supershort giant-robot-destroying romp by *Metal Gear* director Hideko Kojima, though not up to the high standards of his best games, stands on its own. While most games in the genre project the hugeness of their robots with slow, lumbering movements, *ZOE's* bots move like ninjas. A bargain-bin find.

ICO

2001

With a huge amount of praise and countless column inches dedicated to *Ico* over the years, you might expect that the game was a hit. But this moody adventure never received the attention it deserved from gamers. Reaching back to the pre-cinematic days of adventure gaming, *Ico* explains very little in the way of its story but stands as one of the most emotionally engaging games ever made.

GITAROO MAN

2002

Like a rhythm-game adaptation of David Bowie's *Ziggy Stardust*, *Gitaroo Man* follows the story of an intergalactic guitar virtuoso. Charming sketchbook-style art fills the screen with what appears to be a kindergarten's psychedelic mushroom trip while the game's tunes slowly worm their way into your brain. The original playing style (in which you must follow curving lines with the analog stick while nailing

SOMETIMES, GREAT GAMES SLIP THROUGH THE CRACKS,
DOOMED TO TRAVEL THE USED-GAME CIRCUIT UNTIL
ABUSE RENDERS THEIR DISCS UNREADABLE.

the beats with buttons) reinvents *Pareppa's* wheel. *Gitaroo Man* is the very definition of a cult hit.

BEYOND GOOD & EVIL

2003

Released to disappointing sales, *Beyond Good & Evil's* reputation as a hidden classic grows by the year. The robust narrative surrounding photojournalist/leading lady Jade is one of the most overt political statements ever put to polygons, while the game itself takes daring liberties with the *Zelda* template. *Beyond Good & Evil* is a vivid dystopia crawling with intrigue, memorable characters, and carefully crafted "hell yeah" moments. It's a game ahead of its time.

DISGAEA: HOUR OF DARKNESS

2003

American RPG fans usually go for the flash and panache of big-budget, cinematic epics like *Final Fantasy*, but there's a contingent of serious aficionados out there who are famished for complexity, relishing new battle systems and deep customization. *Disgaea* is a game for them. Poured from the mold of turn-based strategy games like *Ogre Battle* and *Final Fantasy Tactics*, *Disgaea* is a serious stat fetishist's feast, and its Japanese quirk factor has endeared it to a small but rabid following.

PSYCHONAUTS

2005

It may be a bit early to call *Psychonauts* a miss, but it seems certain that the game will never garner the audience it deserves. With some of the most genuinely funny writing, imaginative storytelling, and lovable characters ever brought to an interactive world, *Psychonauts* is a name you'll be hearing for years. Sure, Raz, the game's psychic savant hero, unashamedly cops his moves from *Zelda* and *Mario* games, but the levels are what really make an impression. Each representing the twisted psyche of a different character, the levels themselves tell the game's story. Who could forget the milkman's paranoid vision of a suburbia overwhelmed by hidden cameras and secret government agents? *Robert Ashley*

BOB RYBICKI
must confess to his eternal shame that he did not own a PS1 before starting his job at PSX. In his defense, though, the system was not yet a year old, and he was a first-year college student.

IN MY DAY...

THE UNCANNY VALLEY

It was the spring of 1996. Preparing to graduate from college and move from Cleveland to Chicago, I started hunting for a job in the classifieds of the *Tribune*, so I'd be able to, you know, eat once I got there. When I saw the listing for "writer/game player," I knew my life would never be the same.

As part of the interview process for my first job at PSX, (the precursor to this very magazine), I was instructed to write three reviews of games for the recently released PS1. So I headed down to Blockbuster and picked up *Resident Evil*, *Battle Arena Toshinden*, and *Bottom of the 9th*—the first polygonal baseball game. While I tore through all three titles in my parents' basement, my dad, God rest his soul, would come down and make the indescribably bad jokes that were his trademark. At one point he came down, saw me playing *Bottom of the 9th* and said, "I didn't know the Indians were playing today."

"Har har, Dad."
"What? Is this on tape?"

I realized then that he wasn't joking. He was watching me play a videogame that he honestly thought was live baseball. (I should note that it was his hearing that was bad; his eyesight was as sharp as ever.) We gamers may chuckle indulgently at how supremely out of the loop our parents are, but it's worth remembering that to nongamers, games can be indistinguishable from television—at first glance, anyway.

But of course, for those of us with experience with games, there's no such confusion. Even the best-looking games are very recognizably games. Last month I talked about having to struggle to see what was so special about *Project Gotham Racing 3*. The thing that got me was that as good as the game looked, a gamer would never mistake it for a live racing broadcast on TV.

Maybe someday we'll get to the point where gamers really will have to do a Bob Rybicki-style double take when seeing the newest game—an "is it live or is it Memorex?" moment for our industry. But the uncanny valley says it's unlikely.

Put forth by Japanese robotics expert Masahiro Mori, the theory of the uncanny valley says, broadly speaking, that the closer a simulation gets to the reality it's synthesizing, the more the observer notices the differences between fiction and reality. (Watch *Final Fantasy: The Spirits Within* for a really great example of this; no matter how lifelike the characters look, you can't help but notice how unnaturally they move and speak.) And you don't get out of the valley until you're in the area of 90 percent similarity to reality.

Maybe that's why we gamers have become so critical with the current generation: The games are starting to look lifelike enough that our eyes can't help but be drawn to the areas in which they fail. There's probably a lesson about life in there somewhere. But I suppose that's a topic for another column. **|**
